| TAX  | Kosovo Tax Authorities   |
| ToR  | Terms of Reference   |
| VAT  | Value Added Tax  |

### **Executive Summary**

In general, the consultants find that KAS has a relatively good foundation for business statistics in terms of good administrative registers covering the business community and good relationship and cooperation with the relevant authorities.

A basic but working register of legal units are in place and SBS has been collected and published since 2006.

The main STS (Retail Trade, Industrial Production and Construction) are collected but not yet published. Support for the data processing and publication of results are needed.

Some statistics within transport, tourism, and energy are published but not exhaustive in comparison with EU requirements.

The main issues regarding statistics are timeliness, quality and exhaustiveness of the statistics and the statistical programme itself.

The main obstacles for development are the limited human resources. Business statistics are covered by eight people altogether and SBR alone is covered by one person that also acts as the IT-supporter/developer.

The mission was the first of two missions with the objective to assess business statistics in KAS and to produce a road map for the development of business statistics. This mission focused on the assessment and will be followed by a mission where a road map will be drawn up. The next mission will in agreement with KAS be shortened to two days and joined with a mission to start planning for the SBR development.

# 1. General comments

This mission report was prepared within the Twinning Project "Support to Statistics". It was the first mission to be devoted to Assessment of Business Statistics within Component Business Statistics of the project. The mission was aimed at defining a strategic plan forming the base of the further implementation of the project in this statistical area.

The concrete objectives of the mission were:

- An assessment of current status of Business Statistics in Kosovo in order to identify the most fruitful areas of improvements
- To create road map and implementation plan for further interventions designed to improve the quality and timeliness of business statistics

The consultants would like to express their thanks to all officials and individuals met for the kind support and valuable information which they received during the stay in Kosovo, and which highly facilitated the work of the consultants.

The views and observations stated in this report are those of the consultants and do not necessarily correspond to the views of EU, KAS or Statistics Denmark.

## 2. Assessment and results

### General issues

### **Overall principles**

The experts have given recommendation on the progress of work within the duration of the Twinning project taking into account their perception of the capability of absorption within KAS. Primarily due to a small number of staff and a significant overlap of staff between statistics as well as the very limited IT resources (1 person that are also sole responsible for SBR), the experts recommends a strong coordination of development of the business statistics and strict prioritizing, especially regarding IT demanding tasks.

The tasks to be prioritized should be the ones giving the largest benefit. In terms of timeliness and quality it is the opinion of the experts that improvement of SBR benefits most statistics and should be of high priority.

That in turn means that in many cases gaps between EU-regulations and the current situation in KAS cannot be closed during this Twinning project but a plan to do so should be outlined. This goes not as much to gaps in methodology and definitions but more to gaps in the number of indicators produced.

### **Data collection**

Data collection is primarily done as face-to-face interviews either by the seven regional offices of KAS or a private company hired for data collection. The private company is engaged for three years at a time and takes care of all outsourced data collection from KAS. Training of the interviewers is done by KAS.

#### Resources

KAS has very limited human resources – especially IT resources. This puts strong restrains on speed of development since the IT resources will be a bottle neck. Strong coordination between development projects is a must to achieve progress.

Due to the shortage of IT resources alternative approaches to work around the problem should be examined. It should be considered whether increasing IT qualifications of other parts of staff for them to be able to by themselves to solve more IT related tasks related to data processing and publication freeing the IT resources for more complicated tasks.

In some cases existing staff will be faced with new types of tasks that will require additional training or a change in the organization of business statistics to utilize existing qualifications.

### Structural Business Statistics (SBS)

#### **Current situation**

SBS has been conducted since 2006 with reference year 2005. The sample frame is based on SBR. The sample is now taken to cover 80% of the turnover for each activity code according to Eurostat recommendations. Sample size is 3.300 units.

The survey covers annex 1 to 4 of the EU regulation.

The response rate is 60 - 80%

Data from 2012 was ready for publication in December 2013.

#### Target

The most important issue is to have data ready for National Account at a much earlier stage.

The methods for sampling, imputation and estimation may need to be revised.

A major reason for the late availability of data is that the sample from SBR was delayed. This issue has to be addressed by SBR and some improvement should be obtained for 2013. After collection is completed, data are verified; missing data are obtained from larger units (+200 employees) or imputed. This takes 2 months. The project should look into these matters in order to find ways to further improve the timeliness.

The questionnaire and the methods for estimation should be examined and revised if needed.

A long term development plan for future improvements must be developed.

#### Long term development

The procedures for validation and imputation are mostly manual. It should be considered to automate these processes. However this will require IT resources that presently is a very scarce resource.

### Statistical Business Register (SBR)

#### **Current situation**

KAS currently has a Business Register based on information from the Kosovo Business Registration Agency (KBRA), Tax administration and data obtained through surveys (SBS).

The register has only one unit type (Legal unit) where data from the three sources are combined. Local units are not covered.

Data from KBRA includes identification number, name address and other contact information, type of ownership and activity code.

Data from TAX includes fiscal identification number, VAT paid, two other types of tax and employment and salaries paid by month. Turnover is calculated.

Data is received each quarter. Data are not always delivered as fast as KAS would like, and data from TAX may be delivered in different formats from time to time.

It takes up to 30 days to process the data obtained and create a new version of the Business Register.

The conversion to NACE Rev. 2 is well under way. 60% of the units has already been transformed either automatic (where NACE Rev.1 corresponds to only 1 NACE Rev 2.) or using data from SBS 2012. A survey to cover the remaining units has been done and results are expected to be implemented by April 1<sup>st</sup>.

Any remainder as well as new units not yet coded with NACE rev. 2 will be handled through an automated procedure using a correspondence table with probability. There may be a need to take a further look into how this will be coordinated with KBRA. The times for conversion of units in the Business register should be coordinated with the time when KBRA starts using NACE rev 2. This is expected to happen in June. September 1<sup>st</sup> is the deadline set in the law.

There is a strong need for further qualifications of IT staff in SBR. The Twinning project examines the possibilities of supporting KAS with training in IT development.

### Target

At the end of a project a true Statistical Business Register (SBR) should be in place and the procedures for updating the register should be automated, both for data obtained from KOBRA and TAX and for regular feedback from surveys.

There should be an application allowing users to browse the register to obtain information on a specific unit (based on its id-number).

SBR should contain 4 unit types:

- Legal unit, containing the information from KBRA
- Enterprise based on the information from KBRA, but where information obtained through statistical surveys (activity code, address etc.) will take precedence. It will also contain information on whether the unit is considered active, dormant or terminated from a statistical point of view mostly based on TAX data.
- Legal Local Unit containing information on local units obtained from KBRA
- Local Unit based on the information obtained from KBRA, but where information obtained thru statistical surveys (activity code, address etc.) will take precedence

The data on VAT, turnover and employment obtained from TAX are kept in separate table(s) containing information about time period, source, type of indicator and the actual value. The table is linked to the enterprise table.

It should be noted, that the model will not include historical data (apart from the TAX data as mentioned above). A copy of the register will be made after each update (quarterly) in case there should be a need to obtain historic information.

Finally there should be standard procedures to produce survey frames and survey samples.

Taking the resources available for this task into consideration, the above seems to be a very ambitious plan.

#### Tasks

The data available from TAX and KBRA should be closely examined and new agreements on data delivery including time, content and format of delivery should be reached.

Special attention should be given to data on local units from KBRA, as these data has not been utilised before.

Based on this analysis of the sources a detailed data model can be established including any variables that may be calculated (i.e. status of activity).

The next task is to implement the Legal Unit and Enterprise and the table for TAX data. Rules for updating these unit types must be established. The Legal Unit is always updated to reflect the content of KBRA. However, Enterprises may not be automatically updated in cases where they have been updated using data from statistical sources. Such cases may involve the need for some kind of manual intervention.

Next come implementation of the data base with an initial load of data (from KBRA and TAX) to Legal Unit and Enterprise. The Enterprise may take data from the existing Business Register where there are data from a statistical source.

Development of a standard procedure to update the register with data from KBRA and TAX will be needed.

At this stage, the new Business Register may be used for drawing survey frames and survey samples.

Development of procedures to handle feedback from surveys is necessary as the register is used in surveys.

Next step is to implement Local Legal Unit and Local Unit. The steps are similar to the steps described above for Legal Unit and Enterprise.

Development of an application to browse the database is needed for any member of staff in KAS to look-up a specific enterprise. The development of such an application may need support from central IT.

The last thing to development is standard procedures to create survey frames and survey samples.

#### Long term development

The SBR as outlined above may be considered a very basic model. However, it can and should be further developed. This includes but is not limited to keeping track of historic data, options for online editing of statistical units and further integration with survey data.

New data sources may be discovered that will add important information to the units registered. The coverage may be expanded to include agriculture or other sectors not currently covered.

What actually should be done depends on the needs and priorities of KAS and the availability of resources.

#### SBR data model

Administrative units Statistical units

Legal Unit

Local Legal Unit

Local Legal Unit

Statistical units

Data on turnover,
employment etc.

Local Unit

Retail Trade, Industrial Production and Construction

### **Current situation**

The overall situation for the three statistics on Retail Trade, Industrial Production and Construction is very similar and is described together. If special circumstances relates to a specific statistics, it will explicitly be mentioned.

Data is collected quarterly at enterprise (legal unit) level for all three statistics.

Data collection for Retail Trade started in 2013. The sample in 2013 was 580 enterprises from a frame of 16,000. The response rate was approximately 70-80 per cent in the first three quarters of 2013. Currently (February 2014) data collection for fourth quarter is being performed.

Data collection for Industrial Production and Construction were both started in 2011 as pilots. In 2012 the sample criteria was a cut-off at  $\notin$  50,000 (the VAT registration threshold – in comparison the average monthly salary in public sector is less than  $\notin$  500).

The sample size for Industrial Production was 380 enterprises in 2013 with a response rate of approx. 60 percent. The sample size for Construction is 280 enterprises with a response rate of 45-50 percent.

For all statistics the sample criteria from 2013 is that 80 percent of turnover is covered within each relevant NACE rev.1 group.

The reasons for non-response are according to KAS recorded on the questionnaires but no analysis has been done on the data. It is the impression by KAS staff that a significant reason is due to problems in finding enterprises at the address. Addresses are updated from the SBR before each collection. There is not data flow back to SBR.

Data collection for Retail Trade is done by an external company engaged to do a number of data collections. Industrial Production and Construction are collected by the seven regional offices of KAS.

Collection starts 15 days after the end of reference period which is the deadline for enterprises for Tax reports. Data collection takes around one month.

Data are transferred to KAS and validated by comparing data with previous data and data from the Tax authority in a semi-manual procedure where records with differences are selected in the database and then processed manually. In case of differences with tax data the company is contacted.

The sample for 2013 is in all cases selected to cover 80 percent of turnover in all relevant NACE rev. 1 groups at four-digit level. NACE rev. 2 has not been introduced Yet but is expected to be used in the 2014 data collection. Also in 2013 companies were asked about both NACE rev.1 and rev.2 although sampling was done at NACE rev.1.

No data processing has been done for any of the statistics and no results have been published.

The number of persons involved in the Retail Trade, Industrial Production and Construction is low and overlapping high requiring a strong coordination of the Twinning support in order not to block the development of each other.

### Target

The objective is to publish Retail Trade, Industrial Production and Construction indices before the end of the Twinning project.

The Industrial Production and Construction is of higher urgency than Retail Trade due to a KAS commitment to publish in the first quarter of 2014. KAS requested a mission on this end February or beginning of March.

#### Tasks

If possible, a priority should be given to provide support to KAS to make a publication on The Industrial Production and Construction indices.

It will be necessary to evaluate of the current data collection methodology and questionnaire with a view to EU-regulations.

Furthermore it is important to develop sample updates, additional validation, data processing (indices), analysis and publication where Twinning experts should provide practical support

to KAS. Especially methodology concerning non-response, the shift from NACE rev.1 to rev. 2 and the productions of indices is in demand.

It will be the recommendation that adjustments in the current methodology and collection will take into account the available resources and prioritize changes that compromise long term development and coherence.

A long term development plan for the statistics will be prepared in order for KAS to fulfil the requirements of the EU-legislation.

### Long term development

In the long term reuse of administrative data if and when available, complete compliance with EU-regulation, monthly data collection and web-based data collection should be implemented.

#### Transport and telecommunication

#### **Current situation**

Railway transport and transport by air are published based on reports from the railway operator and the airport, respectively. Only one company acts in each of the sectors and information is received timely and is by all accounts in accordance with the aquis.

Furthermore a good working relationship exists between the companies and KAS and changes in data needs will most likely be honoured.

There is no inland waterway or harbours in Kosovo.

Statistics on goods on road is not produced. KAS is not currently using the motor vehicle register that should serve as the frame for statistics on road transport. Aggregate data is foreseen to be delivered from the motor vehicle register within a few months.

Statistics on the transport of persons on roads is not produced.

The resources available for transport statistics are very limited and an introduction of two major surveys as goods on roads and persons on road at one time is not feasible.

Basic information of the supply of telecommunication based on data from the larger of two telecommunication service providers is published. There is a large gap in the current data and the EU-regulation.

#### Target

An outline for a survey on national road transport with goods and a survey for transport of persons as well as plans for implementation

Development plan for the telecommunication statistics that will lead to surveys to fulfil EUregulations

#### Tasks

In order to facilitate a discussion and planning of a survey on goods transport on road, KAS should establish contact with the government authority responsible for the motor vehicle

register with the purpose of making an agreement on regular access to the motor vehicle register and information on the content of the register. A regular delivery should be initiated as soon as possible.

Methodology for a survey on transport of persons will be presented.

#### Long term development

In the long term a regular survey on goods transport on road needs to be established according to EU-regulations.

Establishment of statistics on person transport should be decided upon.

Telecommunication statistics or statistics on Information Communication Technology (ICT) will be developed in accordance with EU-regulation.

#### Energy statistics

#### **Current situation**

KAS is collecting data from the Kosovo energy company (KEK) and the energy distributor (KEDS) and get data from the customs on the import and export of energy.

Energy balances are produced by the Ministry of Economic Development who also surveys energy consumption. From 2015 KAS takes over the production of energy balances including the surveys on energy consumption.

#### Target

The goal is to establish the new surveys and energy balances. It is not yet clear whether support is needed to implement the new surveys and balances.

In the Twinning project there is not foreseen any actions regarding energy statistics. If it turns out that support is needed, the Twinning project should look into the possibility to provide this support.

#### Tasks

Establish the new surveys based on EU regulations.

### Hotels and tourism

#### **Current situation**

Hotels are surveyed by quarterly questionnaires. The sample covers approximately 100 hotel representing 85 percent the capacity. The frame for data collection is based on a register of hotel maintained by the Ministry of Trade and Industry containing 170 hotels. Data collection is done by the regional offices of KAS.

Statistics is published 2<sup>1</sup>/<sub>2</sub> month after the reference period.

No other tourism statistics are produced.

The Ministry of Trade and Industry is starting a project to develop an application for the hotels to report data for the classification of hotels. KAS has provided input as to their requirements for information. In case the application when implemented collects the necessary information it might replace the survey as data source for statistics on hotels.

### Target

The current data collection should be assessed in view of EU-regulation to suggest any improvements.

Furthermore additional surveys to cover other parts of tourism must be outlined and an implementation plan scheduled.

#### Tasks

An assessment of the survey on hotels and the potential data collection through the application developed by the Ministry and Trade and Industry will be made and recommendations on improvement given.

An outline for a survey on other tourism statistics will be produced and an implementation plan scheduled.

### Long term development

Introduction of the full set of tourism surveys in accordance with EU-regulations taking into account the scarce resources that are available to KAS

## **3.** Conclusions and recommendations

In general, the consultants find that KAS has a relatively good foundation for business statistics in terms of good administrative registers covering the business community and good relationship and cooperation with the relevant authorities.

A basic but working register of legal units are in place and SBS has been collected and processed since 2006. The main STS are collected but not yet published.

The main issues regarding statistics are timeliness, quality and exhaustiveness of the statistics and the statistical programme itself.

The main obstacles for development are the limited human resources. Business statistics are covered by eight people altogether.

SBR alone is covered by one person that also acts as the IT-supporter/developer and together with another person acts as support for the whole business statistics.

Based on these overall findings, it is the recommendations of the consultants that

- IT qualifications in the division is increased
- In order to develop a new SBR good knowledge of T-SQL is required
- For analysing data better knowledge of Excel, SPSS and STATA may be needed
- Development that requires advanced IT qualification should be strictly prioritised
- Improvements in the SBR will benefit timeliness and quality in all business statistics and advanced IT resources should in the short term primarily be used for that
- The development of SBS should focus on exhaustiveness and statistical methodology as well as mapping gaps between the current situation and EU-legislation in order to produce a long term development plan that will bring KAS to full compliance with EU-regulations
- The development of the three main STS indicators should first of all focus on publication based on existing data and then exhaustiveness and statistical methodology as well as mapping gaps between the current situation and EU-legislation
- The remaining statistics should focus on methodology in the existing surveys; on gaps in comparison with EU-legislation in order to develop a long term plan; to plan and develop any missing surveys to be implemented by KAS at an appropriate time

#### **Description of the background for the activity**

Structural Business Statistics (annual structural statistics of non-agricultural enterprises) have been compiled by KAS since 2005. The annual survey is based on the SBS regulation. The activity classification is still NACE Rev.1 and a change to NACE Rev.2 has not yet taken place. Most variables of Annex 1 of the SBS regulation and nearly all relevant economic activities are included in the survey. Exceptions include Financial Intermediaries, Education and Health. The sampling frame for Structural Business Statistics is the Statistical Business Register which is, as previously mentioned, not satisfactory yet. In general, only companies with turnovers of more than 50,000  $\in$  are interviewed (in branches where no company has more than 50,000  $\in$  smaller ones are included in the sample). The response rate is rather low and went down in the course of the years. An improvement of the quality of the statistics with regard to the accuracy and timeliness is urgently required. KAS intends to present the data of SBS in the mid-term within 12 months after the reference period.

#### Activities to be undertaken in preparation for the mission:

KAS must supply relevant background information to the MS experts:

List of documents – Can be attached to the TOR in email, referred to webpage or included as ANNEX

- Adapted Global Assessment report (AGA)
- Program of official statistics 2013 -2017
- Strategic Development Plan 2009- 2013

Arrange necessary meetings with external stakeholders: List of meetings with stakeholders external to KAS- can be included in the program for mission

#### The expected activities are:

• Development of detailed planed for actions by the twinning program -

#### **Expected output:**

- Mission report according to template
- Detailed plan for further activities to be completed in component 2 by the twinning program

# Program, - February 2014

| Place | Time   | Event  |
|-------|--------|--|
|       | 08:30  | RTA meet experts at Hotel Sirius   |
| KAS   | 09.00  | Introductory remarks to this part of component 3   |
