

# Research Services at Statistics Denmark

## Some Strategic considerations

Ivan Thaulow  
Head of Research Service

Jerusalem 15. March 2016

# Strategic considerations

## General Strategic Considerations

- Registerdata should play a more central role in research, development and decisions-making
- Research Services should grow significantly over time
- The user-friendliness of the system should be maximised without compromising data-confidentiality
- **All** cost of giving researchers access to data must be paid by the researches, but no profit is allowed

# ... Strategic considerations

## Strategic Considerations of the Research Service Division

- A strong unit within the Statistic organisation must act as an advocate for the users/researchers
- This unit should lead and coordinate all services towards the researchers
- The unit must cooperate closely and smoothly with all relevant subject matter divisions
- The unit should build alliances with the research community and the Central Administration

## ... Strategic considerations

- Keep the technical solutions simple and use highly educated generalists as the backbone of the unit
- Accommodate the needs of researchers by using standardised solutions
- The unit should build up its own database with all the most relevant data in order to secure easy access and fast delivery of data that are coherent over time

The End!
