# Faroe Islands and Greenland

The populations

The economy

# The populations

# One kingdom – three different communities

The Faroe Islands and Greenland are both part of the Kingdom of Denmark, going back as far as the Early Middle Ages. During the 20th century, the two countries have gradually liberated themselves from Denmark and have today independent extended home rule. Home rule was established in the Faroe Islands in 1948. In Greenland home rule was established in 1979 and further autonomy and self rule in 2009.

The authorities in the Faroe Islands and Greenland make legislation governing their own social and economic conditions, e.g. fishing, housing, schools, trade and industry, municipal matters, etc., whereas issues regarding foreign, security and legal policies are joint responsibilities governed in accordance with Danish legislation. Over the years, the Faroe Islands and Greenland have become financially less dependent on Denmark, but still receive financial means from the Danish state. In 2013 the Faroe Islands receive general grants of DKK 632 million, while Greenland receives DKK 3.662 million. In addition to this, the Danish state pays the expenditure on operating, e.g. the legal system and defence.

# **Small populations**

The size of the Danish population is far greater than the population size of the Faroe Islands and Greenland. Denmark has a population of about 5.6 million people, while the populations of the Faroe Islands and Greenland are 48,000 and 56,000 people, respectively. A medium-sized Danish provincial town has, for comparison, a population of about 50,000.

#### Figure 1 Population trends in Denmark, the Faroe Islands and Greenland

# The economic crisis in the Faroe Islands in the middle of the1990s

While Denmark and Greenland have seen a small increase in the size of their populations since 1990, the Faroe Islands experienced a sharp decline in the population size in the middle of the 1990s. The main reason for this was an economic crisis involving negative growth and a steadily increasing unemployment rate. Furthermore, the foreign debt of the Faroe Islands was nearly 150 per cent of GDP. Not until 2003 was the population size the same in the Faroe Islands as in 1990.

Figure 2 Unemployment in Denmark, the Faroe Islands and Greenland

#### Women give birth to fewer children...

In all three communities of the Kingdom of Denmark, women give birth to fewer children today, compared to almost 40 years ago.

In Greenland, women on average gave birth to 2.7 children, compared to 2.1 today. In 1970, women in the Faroe Islands gave birth, on average, to 3.4 children, compared to 2.2 children today and in Denmark women gave birth to almost two children in 1970, compared to 1.7 today.

Consequently, there has been a greater fall in fertility in the Faroe Islands compared to the other communities, but women in the Faroe Islands still account for the highest number of births.

### ... and live longer

The Faroe Islands also account for the highest life expectancy. The average life expectancy of men in the Faroe Islands is 80 years, while that of Danish men is 78 years, and that of men in Greenland is 73 years.

Similarly, women in the Faroe Islands live, on average, until the age of 85, while Danish women live until the age of 82, and women in Greenland until the age of 73.

Note: Figures from Denmark and Faroe Islands are from 2012 and Greenland from 2011.

# The economy

# Small economies in relation to the Danish economy

The economies of the Faroe Islands and Greenland are very small compared to the Danish economy. The Danish gross domestic product (GDP) amounted to DKK 1,820 billion in 2012 and GDP of Greenland was about DKK 13.1 billion in 2011. In 2011, GDP of the Faroe Islands almost reached DKK 13.2 billion.

# Fishing is of great importance for Faroe Islands and Greenland

In addition to the general economic development, developments in the economy in the Faroe Islands and Greenland have been influenced by the fishing industry. The economy of Greenland is especially vulnerable to prices for prawns.

The economy of the Faroe Islands is also highly dependent on the fishing industry, including number of fishing days, developments in farmed salmon and prices for, e.g. prawns and cods.

#### If you want more information ...

Since the first issue of the *Statistical Yearbook* in 1896, Statistics Denmark has published figures for the Faroe Islands and Greenland.

Today, the Faroe Islands and Greenland have their own statistical institutes, which can offer a far greater amount of figures and data than those presented in this yearbook.

The statistical institutes of the two countries can be found at the websites: www.hagstova.fo for the Faroe Islands and www.stat.gl for Greenland. A yearbook containing detailed statistics is also published by Greenland.

The reports prepared by the Chief Administrative Officer in the Faroe Islands and Greenland are also useful sources for your information.
