Preface

The *Statistical Yearbook 2010* is a book about Denmark and the Danish people. The figures show the development of Danish society, and how the conditions of life in Denmark change as society develops.

This has been the case every year since the first edition of the *Statistical Yearbook*, dating back to 1896.

The *Statistical Yearbook* is the most comprehensive of the publications published by Statistics Denmark, and it reflects the majority of the statistics compiled by Statistics Denmark.

Approximately 160 of the specialists working at Statistics Denmark contribute to the yearbook. In addition, the yearbook also includes data compiled by other Danish institutions or authorities.

In this 2010 edition we introduce the new design for Statistical Yearbook. Both the cover and the layout of pages, figures and tables have been renewed. Simultaneously, all tables have been thoroughly reviewed for actuality, among other things, which has led to the omitting of a number of tables.

The printed version of the *Statistical Yearbook* is only available in Danish. However, both the English and Danish versions of the yearbook are accessible, free of charge, in pdf format at www.dst.dk/yearbook and www.dst.dk/aarbog. If there are any subsequent changes to the book, corrections to the page in question will be available on the web sites mentioned.

Historical versions of the *Statistical Yearbook* from 1896 and up to the present day are available in pdf format at www.dst.dk/aarbogsarkiv and it is possible to search for specific words. A full collection of online yearbooks will gradually be available on the web site. Until 1952, the oldest versions are translated into French, while yearbooks from this year and onwards are translated into English. Since 2000, the *Statistical Yearbook* has been published in a separate English version.

We always welcome any comments or suggestions from our users. Please e-mail your suggestions to mpb@dst.dk or sjg@dst.dk.

Statistics Denmark, May 2010

	. . .	Data not available.
	*	Provisional or estimated figures.
	—	Break in a series, which means that data above the line are not fully comparable with data below the line.
		Refers to a link to StatBank Denmark, where additional figures for the statistics in question are available, excluding figures covering several years. StatBank Denmark also stores information on methodology and contact persons.
		Refers from diagram in text section to table.
	Red writing	Red writing refers to corrections made since the first published version of the Statistical Yearbook.

Due to rounding, the figures given for individual items do not necessarily add up the corresponding totals show.

Statistical Yearbook is like the photo above that shows a small part of Copenhagen: A snapshot that reveals much about the Danes and the Danish society. Also, the yearbook describes the life in Denmark over time as regards population statistics, economy, culture, education, consumption etc.

Denmark

Geography and climate

1

Geography

The long Danish coastline

Denmark is a small country, compared to its closest neighbours. Sweden and Germany are ten times and eight times larger respectively than Denmark, which has an area of more than 43,000 km². On the other hand, Denmark's coastline is extraordinarily long for a country of this size. Denmark stretches along a coast of more than 7,300 km, which is longer than the Chinese Wall. It corresponds to almost one and a half metre of coast per inhabitant.

One characteristic of Denmark's geography is the many islands, a total of 407. The largest islands are, by order of mention, Sjælland, Vendsyssel-Thy, Fyn, Lolland and Bornholm. Jutland (including Vendsyssel-Thy) account for 70 per cent of Denmark's total area.

In addition to Denmark, the Kingdom of Denmark includes the self-governing areas of Greenland and the Faroe Islands. The ice-free part of Greenland is almost ten times larger than Denmark.

Denmark's nature is characterized by agriculture and forests

For thousands of years, Denmark has been an agricultural country, and this has largely characterized Danish landscapes. Consequently, two thirds of the landscape consists of man-made agricultural areas. However, forests are also evident in the landscape in the form of, among other types, deciduous forest and coniferous forest. Rold Forest and Grib Forest are the largest forests.

Figure 1

Distribution of Denmark's area by type of area

Table 4

Man-made infrastructure and buildings characterize the landscape

Cities, roads, railroads, bridges and other types of man-made surfaces cover a total of 10 per cent of Denmark's area, corresponding to three times the area of the Faroe Islands – or 56 per cent of Sjælland. Urban centres, such as residential neighbourhoods and industrial districts, dominate and account for three-fourths of the man-made surfaces.

2

Climate

It rains or snows every second day

The Danish weather is known for being variable. It is a fact that it rains or snows every second day in Denmark, since a year has an average of 171 days of precipitation.

Snow seven days a month during the wintertime

Denmark has mild winters without large amounts of snow, but with much rain. On average, it snows seven days every month in December, January and February. This decreases to five days of snow in March, and April has an average of three days of snow.

Figure 2 Temperatures in Denmark

Source: www.dmi.dk

Temperature variations of 16 °C during a year

In a year, the average temperature generally varies from 0 °C in January to 16 °C in August. Great variations occur in relation to the average. The coldest day in more than 100 years was a January day in 1982 with temperatures of -31 °C, and the warmest day was an August day in 1975 with temperatures of 36 °C.

"... and it will be overcast again today"

A natural feature of everyday life in Denmark is overcast days and many clouds in the sky are. The clouds cover an average of two thirds of the sky in a year, but the summer is the least cloudy season with an average cloudiness of 60 per cent.

Not many days of sunshine in a year

Denmark is a country where the total hours of sunshine a year gives occasion to enjoy the sun while it is out. There is an average of four hours of sunshine a day, naturally primarily during the spring and summertime. From May to August, there are more than six hours of sunshine a day.

Note: The figures are based on different primary data covering the period from the end of the 1980s to the middle of the 1990s. Due to different compilation methods figures deviate from figures in table 1. The Primary data are the *land use map; Area Information System* (The Ministry of Environment). Further information can be obtained from: www.dmu.dk. The figures are a revision (not an update) of the collected data. The National Environmental Research Institute conducted the revision in 2001. The classification is based on the three-digit *CORINE land cover nomenclature*, as a fourth number is added for national purposes.

Population and elections

1

Danish population trends

Figure 1
Population

www.statbank.dk/bef1a07 and
folk1

Population size

Since the early 1970s, Denmark has had a population of more than 5 million inhabitants. The size of the population has seen a slow, but steady increase since 1970, and on 1 January 2010 it was 5.5 million people. However, during the early 1980s, the population fell due to reductions in the number of births.

Women are in the majority

Though more boys than girls are born every year, women comprise slightly more than half of the Danish population (50.4 per cent). This is because of higher mortality rates among men. There are more men than women in all age groups up to about 60 years, but women take over in all subsequent age groups. The 95 and over age group comprises more than five times as many women as men.

More births than deaths

Population developments depend on four components: live births, deaths, immigration, and emigration. The population increase during recent years is the result of two things: positive natural increase (births ÷ deaths) and positive net migration (immigration ÷ emigration). Positive net migration means that more people enter Denmark than leave it.

Figure 2 **Population trends**

www.statbank.dk/hisb3

We are growing older

The Danish population is getting older. The average age in Denmark was 40.2 years as of 1 January 2010. For men, this figure was 39.2 years, and for women, it was 41.2 years. When examining 1980 figures, the average age was 3.5 years lower (an overall average age of 36.7 years; 35.5 years for men, 38.0 years for women).

This increase in the average age is caused by an increase of 60 per cent in the number of people over the age of 80. The increase is also occasioned by the fact that the large generations from the mid-1940s have now reached their sixties, as well as the fact that the large generations from the mid-1960s are now being classified to an older age group and are replaced by smaller generations.

Figure 3 The Danish population by age. 1 January 2010

2 The demographic dependency ratio in Denmark

The demographic dependency ratio

The demographic dependency ratio is calculated on the basis of the population distribution by age. Dependency ratio shows the relationship between the number of persons outside the economically active population and the number of persons available to support them – i.e. the population of working age.

The demographic dependency ratio will increase in the years to come

If the economically active (working) population is calculated as those within the 20-59 age group, the dependency ratio in 2010 is 0.90. This implies that for every 100 economically active individuals, 90 persons need support.

On the basis of the projections on population development in 2009, the demographic dependency ratio will increase to 0.97 in 2020 and reach 1.10 in 2030. In the 1970s, the dependency ratio was higher, 0.94 on average. In the late 1990s, it was more than 0.76. This implies that more and more people will need support in the years to come, a development which is linked to the fact that the number of elderly people will continue to increase in future.

3 Births

How many children are born each year?

During recent years, the number of live births has been about 64,700 a year, corresponding to an average of almost 180 a day. The number of births during a given period depends on the number of women of childbearing age and on the number of children born to each woman. In 2009, the *total fertility rate*, i.e. the average number of live births per woman, was 1.84 in Denmark. A fertility rate at 2.08 is needed for the population to reproduce itself given the actual level of mortality. Through the 1950s and most of the 1960s, the fertility rate was above this level. From the late 1960s, the fertility rate fell until it reached bottom in 1983 at 1.38. Since then the fertility rate has risen.

One of the highest fertility rates in EU

Denmark has one of the highest fertility rates in the EU. In 2006, Iceland had the highest fertility rate (2.08) while Slovakia had the lowest (1.24). For Denmark it was 1.85

Figure 4 Fertility rates in European countries. 2007

Source: Eurostat

Older mothers

Over the years, women have become increasingly mature before becoming mothers. In 2009, the average age of women giving birth for the first time was 30.5 years. This development has been especially pronounced since 1970, when the total average age of women giving birth was 26.7 years. The average for first-time mothers was 29.0 years in 2008.

4 Living arrangements

We get married later...

The way in which Danes form families has changed during the last 30 years. The forms of partnership have changed; but marriage is still the dominant form of partnership. 78 per cent of all couples living together are married. However, this percentage is decreasing, especially among the younger generations. In 1980, 66

per cent of all 30 year-old were married. In 2010, the corresponding figure is only 34 per cent for all 30 year-olds. Simultaneously, the average age of women when they first get married has increased from 24.8 years to 32.4 years and from 27.5 years to 34.8 years for men during the period 1980-2008. In 2009 these averages ages fell a little for the first time since the 1960's.

... but still live as couples

The fact that people get older before they get married does not mean that they do not live as couples. It does, however, mean that it becomes increasingly common for couples to live together without being married. This is especially true of the younger generations.

Many singles

More than one third of all adults live without a partner and women comprise the majority of 54 per cent of them. Of those individuals with no partner, 67 per cent of the women and 68 per cent of the men live completely alone. The rest live with other persons, who are often children.

Figure 5 Development in family types for adults

Figure 6 Marriages and divorces

Fewer weddings and more divorces

During the last 100 years the marital relations of the Danes have seen considerable changes. In the latter half of the 20th century the number of divorces was particularly high, and in the same period fewer people got married.

The low point of marriages was reached in 1982 with 24,300 marriages, and since then the level has increased and remained stable since 1995 on about 35,000 marriages per year.

However, in 2009 the number decreased to 32,900. The number of divorces increased during the 20th century and reached a yearly average of 13,000. In the 2000s the average was nearly 15,000.

There are many reasons for the increasing number of divorces and the falling number of marriages. Since the beginning of the 20th century, a number of politi-

cal initiatives have implied that it is easier to get a divorce. In connection with the legal amendments where the period of separation was reduced, the number of divorces increased temporarily.

Another reason is that many people are now more financially independent, and unlike previously it is no longer necessary to marry in order to achieve a reasonable living standard. The financial independence was also assisted by the circumstance that women entered to an increasing extent the labour market in the 1970s.

High number of divorces after 3 to 7 years of marriage

Half of all divorces take place within the first 10 years of marriage. Divorces are most common after 3 to 7 years of marriage.

At the same time, more long-lasting marriages are dissolved by divorce than previously. While 18 per cent of all marriages in 1950 were dissolved by divorce after 25 years, 40 per cent of all marriages in 1980 were dissolved.

Figure 7 Divorces by duration of marriage. 2008

www.statbank.dk/ski107

5 Names

Jens and Anne are the most common forenames

In Denmark the most common first names for men are Jens and Peter. On 1 January 2010, the number was 52,177 and 50,897 persons, respectively, which corresponds to 19.0 and 18.6, respectively, per 1,000 men. Anne and Kirsten with 47,936 and 46,512 persons were number one and two on the list for women, corresponding to 17.2 and 16.7 per 1,000 women.

Jensen, Nielsen and Hansen are the most common Danish surnames

275,113 and 272,804 Danes have the surnames Jensen and Nielsen, respectively. Slightly less common is Hansen, which is the surname of 228,503 Danes. Together, these names each cover a seventh of the population.

This is followed by a number of names, such as Pedersen, Andersen, Christensen, Larsen and Sørensen. These names cover a total of 13 per cent of the population.

Lucas and Emma are the most popular names among new-born children

In 2008, Lucas was the most popular forename among new-born boys and was given to 24 out of 1,000 boys. Oliver and Emil are also popular boy's names. Among new-born girls, 25 out of 1,000 new-born girls were given the name Emma. Freja and Ida were number two and three with each 23 per 1,000 new-born girls.

The popularity of names for new-born children is rapidly changing. Very few parents called their children Lucas from 1985 to 1993, and since then the name has become very popular until today, when it has remained stable. The use of Emma began to increase in the beginning of the 1990s. Emma has been the most popular girl's name five times since 2000.

6

Mortality

Most of the people in Denmark live past 75

In recent years, the number of deaths in Denmark has been approximately 55,000 deaths a year. In 2009, the figure was 54,872. About 87 per cent of all deaths occurred in the over-60 age group and 49 per cent in the over-80 age group.

More Danes are older than 100 years

The number of people who are 100 years of age or more is rising. On 1 January 2010 a total of 889 people (753 women and 136 men) were 100 years or more. In 1980, only 158 people (118 women and 40 men) were 100 years of age or older. That is five times as much in a period of 30 years.

Excess mortality for men compared to women

Men have a higher risk of dying in all age groups except a few ages in childhood where very few persons die. This is to say that there is an excess mortality for men in relation to women. The greatest difference is evident in the 16-35 age group, where the mortality rate for men is two to four times higher than that for women.

Life expectancy reflects the health of a population

Life expectancy is one of the most commonly used statistics for assessing the health of a population. Life expectancy is the average number of years that a person can expect to live, based on the latest figures for mortality. The latest life expectancy has been calculated at 76.52 years for men and 80.75 years for women.

Danes live a shorter time than people in other European countries

The trend as regards life expectancy has not been as positive in Denmark as it has in many other countries. The trend towards stagnation in life expectancy was especially pronounced among Danish women.

In the 1960s, Denmark was among the countries with the highest life expectancy in the world, but later on Danish life expectancy was among the lowest in Western Europe.

However, life expectancy has increased a little more during recent years. During the latest ten years life expectancy has increased by 2.5 years for men and 2.0 years for women.

Figure 10
Suicides

www.statbank.dk/fod5

One quarter of all deaths are caused by cancer

Cancer, heart diseases and cardio-vascular disorders are the three main causes of death. 55 per cent of all deaths are caused by one of these conditions.

The number of deaths from heart disease has fallen in recent years, whereas the number of deaths by cancer shows the opposite tendency.

Fewer suicides

The number of suicides has been decreasing for some years, and the latest figures show 626 suicides in 2008, corresponding to 1.0 per cent of all deaths. Suicide is more than twice as common among men as among women.

7**Internal and external migration****Immigration and emigration (external migration)**

Denmark has more immigrants than emigrants. The level of immigration is, however, relatively low when compared to immigration statistics for countries such as Sweden and Germany.

Immigration is often thought of as immigration of foreign citizens, but Danes can also immigrate. In 2009, 33 per cent of all immigrants are Danish citizens returning after a shorter or longer period abroad or who are born by Danish parents abroad.

Danes emigrate – and then come back

When studying the Danish emigration statistics in 2009, it appears that 45 per cent are Danish citizens. These are usually individuals who go abroad for a period of time to study or work. Thus, most of these people will subsequently appear in the statistics as immigrants.

Figure 11 Immigration and emigration

www.statbank.dk/van211, van222, van21a and van22a

More immigrants from remote countries

Previously, foreign citizens who migrated to Denmark came mainly from the other Nordic countries, the EU countries or the United States, and to some extent from Turkey and the former Yugoslavia.

During the 1980s and 1990s, a large proportion of all immigrants continued to come from these countries; a new trend did, however, emerge: an increase in immigration from Asian countries such as Iran, Iraq and Afghanistan as well as African countries such as Somalia and Ethiopia.

These groups consist mainly of refugees (and their families) who have been granted Danish residence permits.

Figure 12 Immigrants and descendants after country of origin. 1 January 2010

www.statbank.dk/krbef3

Immigrants and descendants

In January 2010, immigrants and descendants comprised 9.8 per cent of the total Danish population (543,000 persons) – about 7.5 per cent are immigrants and 2.3 per cent are descendants. 54 per cent of all immigrants and descendants originate from a European country.

Together they represent about 200 different countries. Turkey, Germany, and Iraq represent the highest shares of immigrants and descendants.

One in seven people move each year

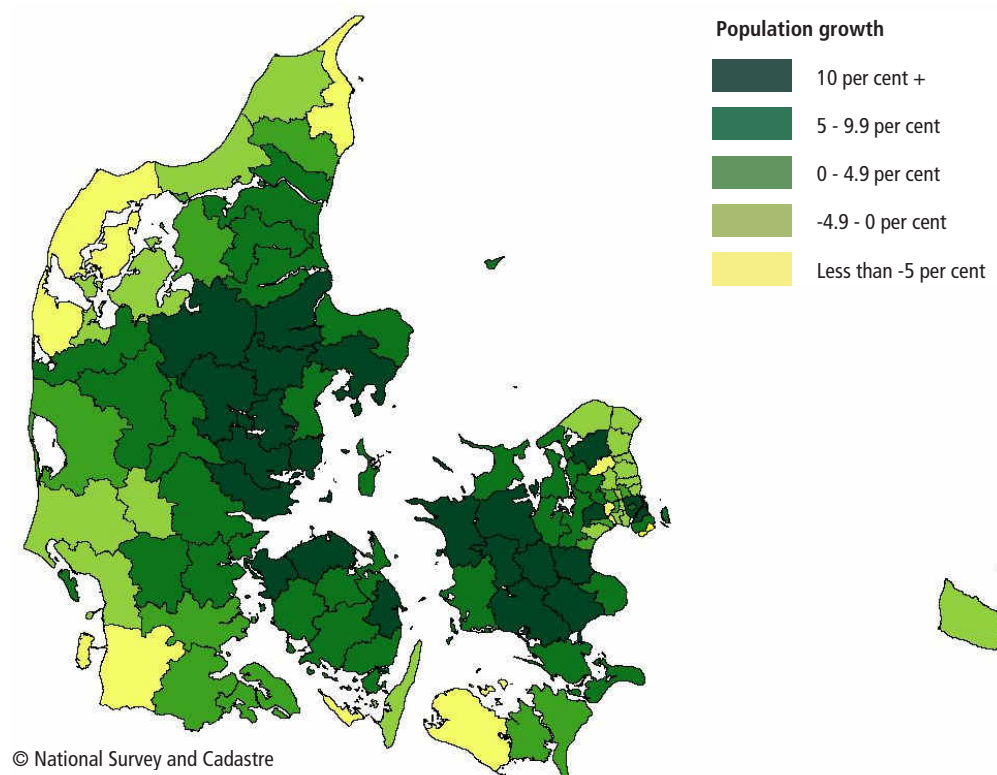

In 2009, more than 797,000 internal migrations are registered. This corresponds to one in seven people moving each year. 34 per cent of the registered internal migrations were migrations from one municipality to another.

Major difference in the population growth among municipalities

In the coming years, the Danish municipalities will experience different trends in population growth. The municipalities of Østjylland, Vest- and Sydsjælland and Fyn will generally experience an increase in the number of inhabitants, while the municipalities of Nordsjælland, Nordjylland and Sydjylland will see a partial decrease in the number of inhabitants.

The population projections are based on a calculation of births, deaths, migrations among the municipalities and a number of assumptions for trends in the future. Consequently, the population projections should be interpreted with caution.

Figure 13 Population projections for municipalities. Development from 2009 to 2030

8 Elections

Elections to the Folketing (general elections)

Statistics are published on a number of different election types; general elections (to the Folketing), elections to region councils (formerly county councils), elections to municipality councils, elections to the European Parliament, and elections to local church councils. Statistics on referendums are also available.

Elections to the Folketing (the Danish parliament) are held before four years after the latest election; elections may, however, be called after a shorter span of time. A total of 175 members of parliament are elected in Denmark, two members are elected on the Faroe Islands, and two members are elected in Greenland.

15 general elections have been held since 1970. Five general elections were held during the 1970s, one every other year. Four elections were held during the 1980s, and the 1990s saw three elections – in 1990, 1994, and 1998. The latest election was held in 2007.

Figure 14 Distribution of seats in the two most recent elections to the Folketing

Table 54

Parties nominated and elected

At the latest election to the Folketing, nine parties were nominated, of which eight entered the Folketing. In 1987, 16 parties were nominated, of which only nine entered the Folketing.

Electoral turnout

In connection with the first four elections in the 1970s, more than 87 per cent of the electorate exercised their right to vote. Subsequent elections have attracted fluctuating electoral turnouts, with the minimum rate being 82.8 per cent in 1990.

The latest general election attracted 86.6 per cent of all voters. The electoral turnout in Denmark is among the highest in Europe.

Elections to the European Parliament

Elections to the European Parliament are held once every five years. The latest election was held in 2009. Denmark elects 13 MEPs. Elections to the European

Parliament attract fewer voters than national elections. At the latest election, that took place at the same time as a referendum about the royal succession, the electoral turnout was 59.5 per cent. Nine parties were nominated, six of which entered the European Parliament. Six of the 13 elected persons were women.

Referendums

Since 1920, 15 referendums and two consultative referendums have been held. Three of these referendums have involved constitutional amendments (in 1920, 1939, and 1953), and five have concerned the voting age (in 1953, 1961, 1969, 1971, and 1978).

Four referendums and one consultative referendum have addressed Denmark's relationship with the EEC/EU (in 1972, 1992, 1993, 1998 and 2000). One referendum, in 1963, concerned acquisition of farms and conservation of nature, and one referendum in 2009 was about the royal succession.

Electoral turnout for referendums has varied to a great extent. The 1972 referendum on Danish accession to the EEC attracted the largest number of voters (90.1 per cent of the total voting population).

Note: Some parishes are divided between two municipalities. The area is allotted to the municipality who had most inhabitants.

¹ Urban areas refers to an area of unbroken buildings with at least 200 inhabitants. ² Population density refers to number of inhabitants per km².

	Population aged 20-64 years 1/1-1996	Deaths	Mortality index	Population aged 20-64 years 1/1-1996	Deaths	Mortality index
	men			women		
Economically active persons, total	1 373 197	53 184	100	1 195 055	27 540	100
Self-employed	169 736	8 548	91	55 261	1 720	103
Of whom: Farmers	35 471	1 621	68	3 027	97	90
Fishermen	2 630	154	116
Retail trade	15 710	726	95	9 575	261	100
Restaurant	4 086	157	117	2 441	74	126
Assisting spouses	1 020	76	120	22 287	897	87
Top Managers	52 958	2 291	73	10 294	297	96
Salaried employees, highest level	162 314	5 017	71	120 719	2 423	81
Of whom: Doctors at hospitals	5 994	159	61	3 354	43	76
Teachers at gymnasium	8 197	329	73	6 091	141	85
Teachers at primary school	21 016	706	68	35 543	849	82
Journalists	4 231	181	109	2 420	41	88
Salaried employees, medium level	157 477	5 605	88	225 753	4 143	87
Of whom: Nurses	29 620	419	77
Teachers	2 630	66	102	22 289	349	84
Programmers	6 298	140	90	2 294	30	89
Captains, Sea pilots	2 617	199	143
Salaried employees, basic level	611 171	22 455	110	565 344	12 463	104
Of whom: Clerk	21 101	507	117	94 175	2 245	108
Cooks, waiters	11 032	396	169	18 691	423	143
Psychiatric nursing aid	5 028	221	107	13 887	425	102
Backers	3 567	140	117
Other salaried employees	217 501	9 153	138	195 363	5 595	117

Note: The table includes persons aged 20-64 on 1.1.1996. Mortality was observed in the period 1.1.1996 up to and including 31.12.2005. The mortality index measures mortality in an occupation in relation to the total number of men and women in the occupation. Calculations take account of the differences in age distribution between occupations.

Other reasons	4 795	9 083	10 258

Note: Convention refugees must meet all conditions listed in the UN Refugee Convention regarding when a person is a refugee. De facto refugees do not meet the conditions listed in the UN Refugee Convention, however they can be granted asylum in accordance with Danish regulations regarding "other or exceptional reasons". Quota refugees are invited to Denmark via an agreement with the UNHCR. The family unification figures do not include children born in Denmark.

Personal votes	46.5	89.4	98.6	50.3	94.0	96.9	50.8	46.1	97.9
Candidates	984	92	13	947	111	16	808	94	16
Of whom women	289	21	4	299	33	6	260	34	9
Elected	175	2	2	175	2	2	175	2	2
Of whom women	67	1	-	66	-	-	66	-	1

Note: The Faroe Islands and Greenland each represent a constituency. The electoral turnout is the number of votes cast as a percentage of the total electorate. The percentage of invalid votes is the blank and other invalid votes as a percentage of the total votes cast. The percentage of personal votes is the personal votes as a percentage of the valid votes.

Education

Pre-school to 10th form

Basic school forms the foundation of the Danish educational system. It begins with pre-school class and leads up to the voluntary 10th school year. In 2008, 719,000 pupils attended basic school. Of these, 65,200 had started in pre-school class, while 176,700 attended 8th to 10th form, and among these, 28,400 attended continuation schools. Due to changes in the age composition of the population, the number of pupils in pre-school class has increased by 2 per cent since 1997. However, the number of pupils in 8th to 10th form declined in the period up to 1999, but it has subsequently increased by 19 per cent in the whole period from 1997 to 2008. Figure 1 gives an overview of the structure and admission systems in the Danish educational system, from pre-school through secondary education to higher education.

Figure 1 Number of students in the educational system. 1 October 2008

Half of the students commence general upper secondary education immediately after leaving basic school

Of all students leaving school in 2007-08, 79 per cent had commenced further education after a period of three months. 53 per cent had chosen to attend general upper-secondary education or vocational education (general programmes of education at second level, second stage, hhx, htx), while 25 per cent opted for vocational education and training, e.g. carpenters, bricklayers or hairdressers. 41 per cent of the students leaving school in 1988-89 attended general upper-secondary education or vocational education, while 37 per cent opted for vocational education and training within a period of three months after leaving basic school.

Figure 2 Students three months after leaving basic school

15 per cent of the students from general upper-secondary education enrol for an education immediately

15 per cent of students who graduated from general upper-secondary education in 2007-08 continued their education immediately after completing their general upper-secondary education. The corresponding proportion of graduates from 1998-99 was 18 per cent. The proportion of graduates from 2007-08 who continued their education immediately after graduating from vocational general upper-secondary education was 32 per cent.

77 per cent of the graduates from general upper-secondary education or vocational education in 2007-08 who had enrolled for further education three months after their graduation chose higher education.

More students commence education and training

In 2008, the number of students attending vocational education and training was 125,100, while the total number attending higher education, e.g. police officers, nurses or doctors, including 6,800 research students, reached 206,000. Since 1998, the number of students attending vocational education and training has increased by 4 per cent, and by 14 per cent for higher education.

Figure 3 Students attending education and training providing profess. qualifications

www.statbank.dk/u11 and u1107

Social science accounts for the highest number of students

Of the 206,000 students attending higher education, social science, educational teaching and the humanities account for the highest number of students, with 26, 16 and 18 per cent, respectively. Within social science, a large number of students attend education as MSc's (economics and business administration), or study law and economics, whereas pedagogues and school teachers prevail within pedagogy. The humanities mainly comprise languages, history, philosophy and theology.

12 per cent of all students attend technical education, such as engineers or architects, and 7 per cent attend natural science education, comprising mainly physics, mathematics, chemistry and biology. 14 per cent of all students attend health education, such as nurses, doctors and pharmacists.

238,000 attended courses in adult education at private course suppliers

Besides the institutions behind adult education and training regulated by law, different types of suppliers of training courses offer training on a private basis. These include private commercial firms, but also the social partners, trade organisations and self governing institutions. In 2008, 238,000 attended courses in adult education at private course suppliers.

Most course participants at adult vocational training centres

Outside the main educational system, there is a number of public-managed courses providing formal qualifications. Adult education courses covering almost all levels of education within the ordinary education system are available.

In the school year 2007-08, more than one million course participants completed their participation in public-managed adult or supplementary courses, and course participants at adult vocational training constituted 68 per cent of these. Course participants at general courses, i.e. 8th and 9th form and higher preparatory course, constituted 23 per cent, while course participants at further education constituted 9 per cent, respectively.

37 per cent of the course participants had vocational training as highest education completed, 46 per cent had basic school, general upper secondary school or unknown education stated, and 17 per cent had completed a higher education.

66 per cent of the course participants at general courses were women

49 per cent of the participants in public courses were women. The proportion of women at the general courses was 66 per cent, while the corresponding figure at the adult vocational training centres was a mere 42 per cent. At the higher education centres, 58 per cent were women.

Ten years after basic school half of the Danes have profess. qualifications

Ten years after leaving basic school in 1997-98, about 48 per cent had completed training providing them with professional qualifications. Of this group, 29 per cent had completed a vocational education course and 20 per cent had completed higher education, while 25 per cent were still studying. The educational remainder – young people who had not attended any educational institution or had completed an education course providing them with professional qualifications ten years after leaving basic school – accounted for 26 per cent of the year 1997-98. The corresponding proportion was 28 per cent for graduates from 1988-89.

2

The population's educational level

Increase in the level of education since 1999

In 2009, 68 per cent of the 30-69-year-olds had completed education providing them with professional qualifications, defined as vocational or higher education aimed at specific types of jobs. This proportion has increased by 9 percentage points from 1999 to 2009. A few more men than women have completed education courses providing them with professional qualifications (51 per cent). Another characteristic feature is the fact that the young generation is more highly educated than their parents.

High frequency of vocational education

The highest level of qualifications among the 30-69 age group was most frequently a vocational education. 38 per cent had completed this type of education, while 30 per cent had completed higher education in 2009. Since 1999, the proportions have increased by 1 and 7 percentage points, respectively.

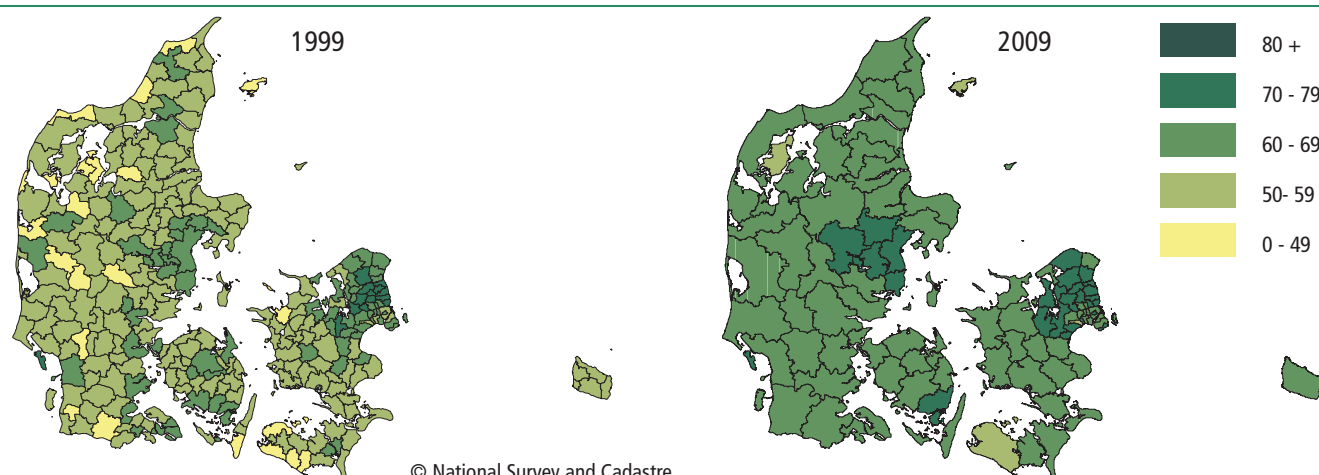

Among the remaining 32 per cent of the 30-69-year-olds of the population, 25 per cent had completed basic school education, 5 per cent general upper secondary education as the highest level of education, while there is no information for the last 3 per cent.

Great regional differences

Great regional differences are evident with regard to educational patterns within the Danish population in 2009. The proportion of individuals who have completed education courses providing them with professional qualifications vary within each region.

There is, however, a trend for the highest proportion completing education courses providing them with professional qualifications to be found around the large cities, with correspondingly lower proportions being evident in the provinces.

Figure 4 Education providing professional qualifications among 30-69-year-olds in per cent

Differences in educational levels evened out in a geographic perspective

Over the recent decade, differences have been sharply evened out as many outlying districts have experienced a higher increase than the major urban areas. Large differences still exist within each region.

Immigrants are in the educational system for a shorter period of time

The educational patterns of young immigrants are different from those of the population as a whole. Fewer immigrants attend an upper-secondary education, higher preparatory education, or higher commercial education and higher technical education, while more only attend basic school. These differences are, however, less significant when compared to 1999 levels; this has implied that more immigrants attend an upper-secondary education, higher preparatory education, and vocational education.

Increasing share of descendants on medium-cycle and bachelor educations

From 1999 to 2009, there was an increase in the share of 20-24-year-olds descendants who were receiving education courses providing professional qualifications from 29 per cent to 39 per cent. Especially, medium-cycle higher education and bachelor education accounted for this increase.

3

Gender and education

Sharp divisions in educational patterns

Sharp distinctions were observed in the educational patterns for 30-69-year-old men and women with regard to both educational levels and fields. More men than women had completed vocational education or long-cycle higher education in 2009, whereas more women than men had completed medium-cycle higher education in the same year. The difference in long-cycle higher education has become less pronounced during the last ten years, and since 2003 more women than men have finished a Master's degree.

As far as vocational education is concerned, there are male dominated subject areas as manufacturing of basic metals and metal products (i.e. mechanics and blacksmith), building and construction (i.e. carpenter and electrician), transport, agriculture (i.e. farmer and gardener) and printing and publishing and food (i.e. cook and butcher). On the other hand, commercial and clerical area (i.e. clerks),

technique and industry, service (i.e. hairdresser) and health care (i.e. nursing assistants) are female dominated.

Figure 5 30-69-year-olds with vocational education as the highest education completed

www.statbank.dk/hfu1 and krhf1

Most medium-cycle courses are dominated by either men or women

As far as medium-cycle education is concerned, four in ten disciplines were sharply dominated by men: These were technical (e.g. building technicians and engineers), agriculture (e.g. forestry and landscape engineers), transport (e.g. marine engineers and shipmasters) and public security education. However, four disciplines (pedagogy, business language, the food sector, and the health sector) are dominated by women. Among the major courses are, for example, school teachers, educationalists and trained nurses.

Figure 6 30-69-year-olds with long-cycle higher education by field

www.statbank.dk/hfu1 and krhf1

Long-cycle higher education is more mixed

As far as long-cycle higher education is concerned, five in ten disciplines were dominated by men, whereas the remaining disciplines were mixed. These were pedagogy, the humanities (e.g. MAs in Danish language), artistic studies, the food sector (MSc in dairy science), and medical studies (e.g. physicians).

Women increased their foothold in certain fields

Even though the educational system continued to be highly divided in terms of gender in 2009, some progress has been made during the period from 1999 to 2009 as regards the education choices made by women and men. The dividing lines remain most rigid for vocational education and training, where the proportion of women has only gone up by 2 percentage points. The greatest degree of relaxation of the gender barriers was evident in long-cycle higher education, where the proportion of women increased by 8 percentage points.

4

Education and employment

Education has a significant effect on employment

Persons with professional qualifications have a higher employment rate than those without professional qualifications. Higher levels of education can lead to better employment.

Figure 7

The relation to the labour market for the 30-69-year-olds. 1 January 2007

www.statbank.dk/krhfu2

5

Education in an international perspective

Level of education in Denmark above OECD average

In all OECD countries, an average of 28 per cent of the 25-64-year-olds had completed a higher education in 2007. At 32 per cent, Denmark was among those OECD countries with a high percentage. The three highest percentages were found in Canada, Japan and the United States, while Portugal, Italy and Turkey accounted for the three lowest percentages.

Figure 8 Persons having completed further education in selected OECD countries. 2007

Source: OECD, Education at a glance 2009.

Danes proceed through many years of education

Children that began pre-school in Denmark in 2007 will proceed through an average of approximately 17.2 years of education before completing a full-time education course providing them with professional qualifications. Australia account for the highest number of years of education with 20.1 years, followed by New Zealand with 19.7 years, then Finland and Iceland with 19.4 and 19.1 years respectively. Mexico and Turkey account for the lowest number of years of education with 13.2 and 12.4 years. The OECD average was 16.6 years in 2007.

6

Culture

Most theatre admissions for plays

Admissions to state-subsidized theatres showed an increase of 3.6 per cent during the season of 2008-2009 compared to the previous season. Plays accounted for 41 per cent of the 2.3 million admissions, while children's theatres accounted for 19 per cent.

The remaining types of theatres were distributed as follows: Opera (10 per cent), operettas/musicals (10 per cent) and ballet/dance (10 per cent), while performance and revues/cabarets had a total of 10 per cent of the admissions, during the 2008-2009 seasons. The state subsidized theatres had a total of 540 performances and were shown 11,970 times.

Non state-subsidized theatres

During the 2008-2009 seasons the non state-subsidized theatres had a total of 184 performances. The performances were shown 3,886 times and there were a total of 662,000 admissions, corresponding to an average of 170 admissions per performance. Plays accounted for 25 per cent, children's theatres accounted for 24 per cent and operettas/musicals for 18 per cent of the admissions. The non state-subsidized theatres accounted for 23 per cent of the total number of admissions for plays in Denmark.

Figure 9 Various cultural institutions – activities**Most sold movie tickets in 20 years**

In 2009, the number of tickets sold for films screened at Danish cinemas reached 14.1 million, which was 6 per cent more than in 2008. The number of tickets sold for American films increased by 12 per cent, while Danish films decreased by 43 per cent. In 2009, the three films seen by most people were *Män som hater kvinnor*, *Flickan som lekte med elden* and *Harry Potter and the half-blood prince*.

Danish films accounted for 17 per cent of all tickets sold in 2009. Compared to the previous year, this is a decrease of 15 percentage points. The most popular Danish film was *Sorte kugler* which accounted for 404,777 tickets in 2009.

10.7 million visits to museums

In 2009, admission rates of Danish museums reached 10.7 million visitors. Compared to the 2008 admission rate, there has been an increase of about 2.2 per cent. Of the 249 museums in the statistics, 156 of them were subsidized by the state. In 2009, the zoological and botanical gardens had a total of 3.8 million visitors which is 100,000 more visitors than in 2008.

Figure 10 The ten highest admission rates

Table 101

Figure 11
Average daily
circulation, total

Table 82 and 83

Louisiana accounts for the highest admission rates

The gallery Louisiana accounted for the highest admission rates of 475,000 visitors. Subsequently, the National Museum of Denmark had 397,100 visitors.

Newspapers circulation

From 2008 to 2009 the average circulation of daily newspaper has decreased by 9.9 per cent. The average circulation of the 20 largest newspapers has decreased by 10.4 per cent. For the five largest newspapers Jyllands-Posten, Berlingske Tidende, Politiken, Ekstra Bladet and B.T. the average circulation decreased by 7.0 per cent. For Sunday newspapers the average circulation decreased by 7.5 per cent corresponding to 75.000 newspapers.

The elderly watch most television

97 out of 100 households in Denmark have a televisionset and most of them have access to DR1 or TV2. The average viewing rates of Danes were 3 hours and 9 minutes per day in 2009 which is an increase of 22 minutes since 2008.

There is a general increase in daily television consumption with age, and persons over 55 years have by far the highest television consumption reaching an average of 3 hours and 56 minutes per day. Children aged 4 to 11 on average watch television 1 hour and 53 minutes per day, and this age group thus accounts for the lowest television consumption. In 2009, the most time spent on watching TV was accounted for by the channels TV2, DR1, TV3, DR2 and TV3+.

The number of people watching a TV channel is widely dependent on the number of people who have access to the channel. For example, almost all households in Denmark with a television set have access to DR1 and TV2, while two out of three have access to TV3.

Labour market

1

The Danish labour market

Men and women's activity rate – the difference decreases

Labour market statistics are based on the basic concepts adopted by the International Labour Organization (ILO), according to which the population is divided into three groups:

- Employed
- Unemployed
- Persons outside the labour force

Figure 1
Activity rate of
16-64-year-olds

www.statbank.dk/ras1f1

The labour force consists of employed and unemployed persons. The activity rate is calculated as the labour force in relation to the population that is of working age (16-64-year-olds).

Developments from 1981 to 2008 show significant differences between men and women. Women's activity rate increased primarily in the 1980s. The increase in the activity rate for women started, in reality, before 1981, but Statistics Denmark has only made annual calculations of the population attachment to the labour market from 1981 and onwards. The activity rate of men decreased in the 1980s. In the 1990s, in which Denmark had a period of recession, the activity rate of both men and women decreased during most of the period. The fall in the activity rate for women ceased in 1997, and thereafter the activity rate for women rose until 2003. During the same period the activity rate for men continued to fall. During the last couple of years, activity rates for both men and women have increased slightly.

Figure 2 Activity rate by age

The increasing labour force participation for women implies that their activity rates distributed by age have changed significantly over time. In 1981 women's activity rates already began to decrease in their early thirties. When women were

in their mid-forties, they began, to a considerably extent, to leave the labour market. In 2008 women's activity rates distributed by age remain at a high level until they reach the age of 60, which is similar to the pattern of men.

Immigrants and their descendants in the labour market

The number of immigrants and their descendants of working age has increased from 108,000 to 358,000 in the period 1981-2008. Especially, the number of immigrants and their descendants from non-western countries has increased.

There were 36,000 immigrants and descendants from non-western countries aged 16-64 in 1981, while the figure was 236,000 in 2008.

Immigrants' activity rate is lower than that of persons of Danish origin. Immigrants from non-western countries account for the lowest activity rate of 60.7 per cent in 2008. Simultaneously, the difference between men's and women's activity rate is relatively large for immigrants from non-western countries.

The groups of descendants from non-western countries mainly consists of persons aged between 16 and 30, and for that reason a substantial proportion of the group still attend an education. Nevertheless, descendants from non-western countries have a higher activity rate (70.0 per cent) than immigrants from non-western countries, and the difference between men's and women's activity rate is smaller than that of immigrants.

Figure 3 Activity rate of immigrants and their descendants. 2008

2

Unemployment and other persons not in ordinary employment

Increasing unemployment throughout 2009

Following several years of steadily falling unemployment, the number of registered unemployed started to increase during the last six months of 2008 and has been on the increase throughout 2009. This has implied that the number of registered unemployed reached nearly 100,000 persons (converted into full-time) in

2009. This constitutes almost a twofold increase, compared to the historically low number of unemployed in 2008.

The compilation of statistics on the number of registered unemployed does not fully comply with the definition laid down by UN's International Labour Organization (ILO). The most important difference is that students and pensioners are not covered by the statistics as they are not entitled to claim unemployment benefits or social assistance. Another difference is that the number of registered unemployed is compiled as the total unemployment volume of the persons (unemployment of the persons is converted into full-time), while the ILO definition stipulates that the statistics should be exclusively compiled on the basis of the fully unemployed number of persons.

Figure 4 Seasonally adjusted unemployment in per cent of the labour force

www.statbank.dk/aus01

Unemployment is higher among men than among women

The seasonally adjusted unemployment reached its lowest level of recent time in the middle of 2008, and since then it has been on the increase for both men and women. The increase is mainly accounted for by men, as they are typically employed in the hardest hit industries: manufacturing, construction and the service sector. In per cent of the labour force, the seasonally adjusted unemployment for men increased by 3.5 percentage points since the middle of 2008, while the corresponding increase for women was 1.8 percentage points. These differences imply that the seasonally adjusted unemployment (in per cent of the labour force) is now higher among men than among women. In a historical perspective, women have predominately accounted for the highest unemployment rate. We have to go back as far as 1976 in order to find a similar situation where unemployment (in per cent of the labour force) was higher among men than among women.

Higher number of long-term unemployed persons

There is a sharp increase in the number of long-term unemployed persons out of the total number of 96,500 full-time unemployed persons in 2009. In 2009, 5,700 full-time persons were unemployed for more than 292 days, corresponding to an unemployment degree of at least 80 per cent during the year. In 2009, the number of long-term unemployed persons made up 5.9 per cent of the total unemployment

rate, while the corresponding share was 3.6 per cent in 2008. It should be noted that the periods in which a person participated in job activation are excluded from the delimitation of long-term unemployment.

Figure 5 Full-time unemployed persons by degree of unemployment

www.statbank.dk/augar02

Persons who are not in ordinary employment

The statistics on persons who are not in ordinary employment aged 16-64 (converted to full-time) provide an overall view of the number of registered unemployed, participants in subsidized employment, guidance and upgrading, recipients of sickness and maternity benefits, persons claiming early retirement pension, and early retirement pay recipients as well as other benefit recipients.

Figure 6
Full-time participants
by type of benefit. 2009

In the light of this delimitation, 819,700 persons (converted into full-time) were not in ordinary employment in 2009. Of whom 45.0 per cent had retired from the labour market, 12.0 per cent were registered unemployed persons, 10.4 per cent were in subsidized employment, 7.2 per cent claimed maternity benefits, 5.9 per cent participated in measures concerning guidance activities or special activities upgrading skills, while other recipients of benefits made up 19.6 per cent.

Subsidized employment, including persons in flex jobs

As mentioned above, subsidized employment made up 10.4 per cent of the total number of persons, who were not in ordinary employment in 2009, corresponding to 85,300 full-time persons, of whom 51,600 full-time persons were in flex jobs. The remaining number of 33,700 full-time persons consists of adult apprentices, light jobs, business in-service training, employment subject to wage subsidies, etc.

The number of full-time persons in flex jobs has increased steadily since 2000, from a level of 8,600 persons (converted into full-time) to 51,500 persons in 2009. This increase is attributed to all age groups, but the 50-66 year-olds accounted for the largest increase. In 2000, persons aged 50-66 made up 36.9 per cent of the total number of full-time participants in flex jobs, while this share had increased to 53.1 per cent in 2009.

Figure 7 Full-time participants in flex jobs by age**Figure 8** Number of persons receiving early retirement pay**Changes in the number of persons receiving early retirement pay**

The number of persons receiving early retirement pay has increased steadily during the period from 1996 to 2004. The highest level was reached in the 4th quarter 2003, when the number was 178,700 full-time persons. By the end of the 4th quarter 2009, the number of persons receiving early retirement pay had decreased to 130,200 full-time persons, corresponding to a fall of 27 per cent. The sharp fall in the number of persons receiving early retirement pay from 2004 to 2006 is particularly reflected in the reduction of the retirement age from 67 to 65 years for persons born after 1 July 1939.

In relation to the population of persons who have reached the early retirement age (60-64 years), the share of persons receiving early retirement pay has decreased for all age groups in the period from 2004 to 2009. It is especially the share of 60-61 year-olds who accounts for the fall in the number of persons receiving early retirement pay. For example, 29.7 per cent of the persons aged 61 (converted into full-time) received early retirement pay in 2004, while this share had fallen to 21.0 per cent in 2009 – i.e. a fall of 8.7 percentage points.

Figure 9 Share of the population receiving early retirement pay by age

Note: Shares are estimated as the number of full-time persons receiving early retirement pay in relation to the population number at the end of the year (in each age group).

New possibilities of conducting analyses of longitudinal unemployment

In 2009, a new database was established comprising information on recipients aged 16-64 participating in maintenance schemes, e.g. unemployment benefits, social assistance, rehabilitation, early retirement pay and early retirement pension. The database constitutes a so-called longitudinal database where each person's participation in maintenance schemes, etc. is indicated by date of registration and date of de-registrations. This opens up the possibility of analysing the number of new registrations to – and the number of de-registrations from – the different schemes for each population group. In connection with establishing the database, a theme publication was issued “Unemployment – a new analysis of longitudinal unemployment” in which two new concepts for analysing the current number of registrations and de-registrations of unemployment were introduced. These two concepts are unemployment risk and expected duration of unemployment.

Unemployment risk has doubled since the middle of 2008

The unemployment risk reflects the share of persons insured against unemployment during the course of a specific month, and is defined as the number of commenced unemployment periods in a specific month in relation to the number of days with the possibility of commencing an unemployment period.

The seasonally adjusted risk of commencing unemployment was 1.9 per cent in August 2009. In the middle of 2008 – when unemployment was historically low – the unemployment risk was 0.9 per cent.

Figure 10 Unemployment risk. July 2000 – August 2009

In the theme publication, analyses of the unemployment risk for a number of population groups, e.g. by sex, education and previous occupation, were conducted. The analyses showed, e.g. that persons with basic school or vocational education as the highest educational accounted for the sharpest increase in the unemployment risk, and that the unemployment risk has tripled during the period from July 2008 to August 2009 for persons employed in manufacturing and construction as a whole.

Expected duration of unemployment

A statistical measurement of the expected duration of unemployment, which does not depend on the previous unemployment situation, can be calculated on the basis of the current pattern of de-registrations. The expected duration of unemployment is thus an indicator of the duration of the unemployment period and exclusively reflects the most current unemployment.

Until 2008, women have accounted for a higher expected duration of unemployment than men, and the duration has gradually fallen during the period. In 2008 and 2009, women and men have more or less experienced the same development in the expected duration of unemployment. In the period until August 2009, men accounted for the highest unemployment (converted into full-time), while men and women mainly accounted for the same increase in the expected duration of the unemployment spells. The main explanation for the differences in the development of unemployment between men and woman is that the risk of being unemployed has risen considerably more for men than for women.

Figure 11 Expected duration of unemployment

3

Employment and hours worked

The service sector accounts, by far, for the highest number of persons employed in Denmark. The largest industry groups are thus *public administration, education and health* employing 836,000 persons (corresponding to 29.2 per cent of persons employed) and *wholesale and retail trade, and transport, etc.* employing 695,000 persons (24.3 per cent of persons employed). Primary industries *agriculture, forestry and fishing* account for a substantially lower share employing 78,000 persons (2.7 per cent of persons employed).

Figure 12 Employed by industry. 2008

www.statbank.dk/atr11

The number of hours worked by women is lower than the number of hours worked by men. In 2008, 23.6 per cent of women were working part-time, while only 16.9 per cent of men were working part-time. However, the difference between men's and women's part-time activity rate becomes smaller over the years. Consequently, more women (25.5 per cent) and fewer men (15.4 per cent) were working part-time in 1998.

Figure 13 Persons working part-time

Note: Part-time is defined as persons working less than 27 hours per week in their main activity.

Source: Working Time Account

From 1998 to 2008, the number of hours worked by employed persons increased by 11.5 per cent for women and 5.9 per cent for men. The main explanation for this is that employment has increased more for women (9.8 per cent) than for men (5.3 per cent). However, part of the explanation is that an employed person worked, on average, more hours in 2008 than in 1998, as the increase in the num-

ber of hours worked is higher than the increase in employment. It is particularly women who work, on average, more hours than previously.

Figure 14 Hours worked and employment

4

Pay and hourly earnings

Earnings and hourly earnings

Earnings comprise the payment made by employers to each individual employee, including holiday and public holiday allowances, fringe benefits, bonuses and total pension contributions, etc. Earnings can be related to, e.g. the number of hours worked by an employee in the period as well as the *normal* number of hours worked by an employee in the period. The two concepts are called in the statistics on earnings, respectively, earnings per hour performed and direct remuneration. Direct remuneration generally indicates the amount earned by an employee per hour during the period in which he/she is employed to perform work – whereas earnings per hour performed indicates the cost per hour paid by an employer for employing an employee to perform his/her work.

Men employed in managerial positions in the private sector account for the highest earnings

Irrespective of the way in which earnings are calculated, men's earnings are, on average, higher than women's and earnings of persons in managerial positions are higher than those of other employees and earnings of people living in Zealand are higher than those of people living in Jutland. Average earnings of central government employees are higher than earnings of local government employees as well as persons employed in the private sector. The greatest spread of earnings is, by contrast, seen in the private sector. Hourly earnings for the ten-percent highest paid employees in the private sector were more than DKK 394 per hour performed in 2008, while the ten-percent lowest paid employees earned less than DKK 156 per hour performed. Hourly earnings of the ten-percent highest paid central government employees were more than DKK 370 per hour performed, while the ten-percent lowest paid employees earned less than DKK 188 per hour performed. In municipalities and regions the numbers were DKK 307 and DKK 160 respectively.

Figure 15 Earnings by sectors. 2008

5

Commuting

Longer commuting distances

In 2008, every Dane travelled, on average, a distance of 18.6 km to and from the home and work. Compared to 2005, this is 1.1 km longer and 1.5 km longer in relation to 2003.

Figure 16 Commuting. 2008

© National Survey and Cadastre

www.statbank.dk/afstb2

On average, men are working 21.6 km away from their home, while women only need to travel 15.3 km to their job. This implies that the average commuting distance between men and women is 6.3 km, which is slightly shorter than in 2003, when it was 6.6 km. The commuting distance is calculated as the shortest road distance between the home and work. The statistics cover all employed persons who are not living and working at the same address. Commuting usually involves a daily journey between the home and work, but in some cases the journey takes place at more irregular intervals.

Commuters from Copenhagen account for the shortest distance

People living in Vest- and Sydsjælland account for the longest commuting distance to their work, i.e. 26.3 km. In addition to employed persons living in Vest- and Sydsjælland, employed persons living on Bornholm, in Østsjælland and in Nordjylland have an average commuting distance of more than 20 km. However, the commuting distance of employed persons living in København By and Københavns Omegn is only 12.4 km.

6

Absence

Women are more absent due to sickness than men

The employees in the regions and the municipalities were on average absent from work 12.87 days due to sickness in 2008. In the central government sector, employees were, on average, absent 7.89 days due to sickness.

In both sectors women are more absent from work due to sickness than men are, and the different absence figures between the sectors are partly due to the different proportions of men and women in the sectors.

Within regions and municipalities 78 per cent of the employees are women where as the proportion of women in the central government is 43 per cent.

Figure 17 Absence caused by own sickness. 2008

www.statbank.dk/fra05

In the two sectors the occupation of the employees differs. This has an impact on the extent of absence. In the regions and the municipalities a large share of the employees are for instance occupied with welfare work which is an area with a relatively high level of absence.

The statistics on absence concerning the private sector are subject to revision and is consequently excluded.

7

A European perspective

Denmark has the highest employment rate in the European Union

With 78.1 per cent of the population in the age 15-64 years in employment, Denmark has the highest employment rate in the European Union according to the Labour Force Survey.

The Labour Force Survey collects data according to the same guidelines and with similar methods in all European Union countries. Therefore information from the Danish Labour Force Survey is directly comparable with information from similar surveys in other European Union countries.

In 2008 the Danish employment rate was above the European Union average of 65.9 per cent – ahead of the Netherlands and Sweden, where the employment rates are 77.2 per cent and 74.3 per cent, respectively.

Hungary and Malta have the lowest employment rates in the European Union at 56.7 per cent and 55.3 per cent, respectively.

The employment rate is defined as the percentage of employed persons in a specific age group in the population.

The chapter *International statistics* contains further employment figures for a wider range of countries.

Figure 18

Employment rate in the EU. 2008

Source: Eurostat

The Netherlands has the highest employment rate for men

With 83.2 per cent the Netherlands has the highest employment rate for men among the 27 countries in the European Union. Denmark is second at 81.9 per cent followed by Cyprus where 79.2 per cent of the men are employed.

With 65.7 per cent and 63.0 per cent, respectively, Romania and Hungary have the lowest employment rates for men in the European Union. Slovenia is, with 72.7 per cent, just below the EU average of 72.8 per cent.

Figure 19 Employment rate in the EU, men. 2008

Source: Eurostat

Denmark has the highest employment rate for women

Since 2004 Denmark has had the highest employment rate for women in the European Union. With 74.3 per cent of the women in employment this was also the case in 2008.

Figure 20 Employment rate in the EU, women. 2008

Source: Eurostat

Denmark is ahead of Sweden and the Netherlands where female employment rates are 71.8 per cent and 71.1 per cent respectively. The EU average is 59.1 per cent.

At 47.2 per cent and 37.4 per cent, Italy and Malta have the lowest employment rates for women in the European Union.

Denmark has the second lowest unemployment rate in the EU

Among the 27 countries of the European Union, only the Netherlands has a lower unemployment rate than Denmark in 2008.

The unemployment rate among those aged 15-64 years in 2008 was 3.4 per cent in Denmark whereas it was 2.7 per cent in the Netherlands. Denmark is followed by Cyprus, where the unemployment rate is 3.8 per cent.

Spain and Slovakia have the highest unemployment rates in the EU with 11.4 per cent and 9.5 per cent, respectively. The EU average unemployment rate is 7.1 per cent.

The unemployed are in the Labour Force Survey considered to be those without a job, who wish to get a job, have looked for a job within the last four weeks and can begin a new job within two weeks.

The chapter *International statistics* contains further unemployment figures for a wider range of countries.

Figure 21

Unemployment rate in the EU. Age 15-64 years. 2008

Source: Eurostat

Youth unemployment in the EU

Considering the youth unemployment rate in the European Union, defined as the unemployment rate for those aged 15-24 years, Denmark is also placed relatively low at 7.6 per cent. Again, it is the Netherlands who has the lowest unemployment rate at 5.3 per cent.

In our neighbouring country Sweden the youth unemployment rate is surprisingly high at 20.2 per cent while the unemployment rate for those aged 15-64 years is 6.3 per cent.

Spain and Greece have the highest youth unemployment rates in the European Union with 24.6 per cent and 22.1 per cent, respectively. The EU average is 15.5 per cent.

¹The number of registered unemployed differs from the previously tables due to different reference period. The previously tables refer to the period from the 22-12-2008 to the 20-12-2009 and this table refer to the calendar year 2009. ² The calculation of the number of full-time recipients is here exclusively conducted on the basis of reductions in relation to the number of full days recipients have participated in subsidized employment during the year. ³ Additions to *service jobs* were discontinued at the beginning of 2002. ⁴ The figures for maternity and sickness benefits are underestimated with resp. 1.000 and 300 persons. ⁵ Parental leave can only be granted to children born or adopted before 27 March 2002. ⁶ Recipients of benefits due to disablement are not included here.

Social conditions, health and justice

1

Social conditions

Objectives of the Danish social security system

The social security system in Denmark has several objectives:

- 1) To secure the population financially in the event of, for example, sickness, unemployment and old age through income-substitute benefits.
- 2) to offer support to bring down expenditure on, for example, housing and child care through supplementary subsidy schemes.
- 3) to provide appropriate services in areas such as child care, care of the elderly, care of the disabled, health care and home help through institutions and services.

Social expenditure amounts to DKK 502 billion

Total expenditure for social purposes amounted to DKK 502 billion in 2008 or DKK 92,000 per capita. Expenditure on social services (excl. administration) measured in relation to GDP accounted for 29 per cent in 2008. Expenditure on old age is the largest social item and comprises, for example, pensions, nursing homes and home help for the elderly. Social expenditure is defined broadly in this context and also includes health services and labour market schemes expenditure.

Figure 1 Expenditure on social services analysed by purpose. 2008

www.statbank.dk/udg1

Financing of social expenditure

The public sector's proportion of total grants and contributions to social benefits reached 66 per cent in 2008, of which the central government accounted for 21 per cent and the local government authorities for 45 per cent. Employer contributions reached 12 per cent, while persons insured accounted for 22 per cent.

The proportion paid by the state has for some years been decreasing while there is an increase in the proportions paid by the local and regional authorities, the employers and the persons insured.

Denmark ranks fourth in the EU

According to Eurostat, Denmark with its 29 per cent in 2007 ranks fourth among the 27 EU countries with respect to social expenditure in relation to gross domestic product. Denmark has moved down after having been ranked third in a few years, while Sweden and France ranked first and second. Also Sweden has moved down and is now second while France is ranked first. Belgium and Holland is ranked third and fifth. As before Lithuania, Estonia and Latvia were ranked at the bottom with a proportion of 13, 13 and 11 per cent, respectively.

The comparison of social expenditure is not corrected for differences in income taxes on social benefits and legislation concerning payments of VAT and indirect taxes, etc., in each country. International comparisons are always difficult. This also applies to comparisons of social expenditure.

Figure 2 Social expenditure as a proportion of GDP in EU. 2007

Note: Calculations are based on Eurostat's joint classification (ESSPROS) in which expenditure is calculated gross.

Source: Eurostat/ESSPROS

More day measures for children and young people

Staff requirements for looking after children reached 99,000 man-years in 2008. In 1985, 59,500 man-years were required and this has resulted in an increase of staff requirements by 66 per cent over the last 20 years.

The increase in staff requirements is related to the development in population size and its composition as well as the entire development in the labour market, including particularly the increasing activity rate and working time of women.

The staff number for schemes within outside school-hours care, etc. has risen by almost 150 per cent, while the staff number used in day-care institutions and for child day-care has risen by 50 per cent.

The increase in staff requirements is caused by the fact that more babies and young children are looked after outside their home and that more school children attend leisure-time activities after school hours.

Figure 3 Employees in the social sector

Note: There is a break in the data series from 2005 to 2009.

www.statbank.dk/pas33, res2, res2n, res10 and res10x

More home help

Out of a total of approximately 226,000 persons aged 80 and over, 124,000 received permanent home help, either in their own home, including dwellings for the elderly or in nursing homes/residential homes. Out of these 124,000 31,000 were men and 93,000 women. The share of persons receiving permanent help increases sharply concurrently with their age.

There is also a sharp increase concurrently with age in the share of people living in nursing homes/residential homes. With regard to care of the elderly etc., the increasing number of staff is extensively related to the development in the population. Moreover, the number of staff in the municipalities has risen because e.g. physical rehabilitation and care of the handicapped has been transferred from the counties to the municipalities in connection with the structural reform of Danish municipalities.

From 1985 to 2008, the Danish population increased by 7 per cent, while the number of elderly people aged 80 and over increased by 37 per cent. Consequently, this gives rise to greater requirements for home help and day and night care. Since 1985, new social and health schemes such as preventive "home-visits", shared accommodation for disabled adults, contact persons and companion schemes have also been established.

More nursing homes and dwellings for the elderly

A restructuring in care of the elderly was undertaken from the middle of the 1980's, which implied that substantial efforts were made to enable the elderly to live in their own homes and an expansion of dwellings for the elderly as a replacement of the reduction in the number of residential homes.

Today, the number of nursing homes is 36,000, 9,000 residential homes and 2,000 protected homes and 32,000 general dwellings for the elderly. There is a total of 79,000 nursing homes and dwellings for the elderly. In contrast, there were 49,000 residential homes, 7,000 protected homes and 4,000 dwellings for the elderly, i.e. a total of 60,000 nursing homes and dwellings for the elderly in 1987 (when homes and dwellings for the elderly were introduced into Danish legislation).

In the nursing homes and the residential homes the enrolled persons have 24-hour staff, common services and activities and linen service etc. This is also estimated to be the case in two out of three protected homes. The general homes are seen not as institutions, but as own homes, and the persons get the same amount of home help as people who live in apartments, one-family houses and row houses. The free-choice schemes established in 2003 also apply to these persons.

2.1 million people receive transfer payments

A total of 2.1 million people in Denmark received transfer payments in 2007. The recipients are described in separate statistical tables, e.g. unemployment benefits, sickness benefits, maternity benefits, and social assistance benefits.

Recipients are grouped in the most predominant category of benefit, i.e. the benefit that they have received for the longest time in a year. Benefits are divided into temporary and permanent benefits. Of the 2.1 million people who received transfer payments, 935,000 were men and 1,204,000 were women.

Figure 4

Recipients of transfer payments – temporary benefits. 2007

www.statbank.dk/sam11

More women than men received income-substitute benefits

In 2007, more women than men received income-substitute benefits. With regard to the old age pension, this can be explained by the fact that 56 per cent of the population at 65 years and above were women.

A substantial proportion of recipients of leave benefits and maternity benefits were also women. However, there are also many women in the group that these schemes were intended to benefit.

Figure 5

Recipients of transfer payments – permanent benefits. 2007

www.statbank.dk/sam11

Supplementary subsidy schemes

With regard to the supplementary subsidy schemes, a total of 184,000 households received DKK 209 million through rent subsidies in December 2008, while 311,000 pensioner households received a total of DKK 715 million through rent allowances.

690,000 families received child benefits, of which 127,500 families with a lonely provider also received an ordinary child allowance in the 4th quarter of 2008.

Parents have 299 days of maternity leave

Children born in 2007 were happy to see that their parents stayed at home to look after them for 299 days after their birth. The mothers accounted for the greater part of the maternity leave, 275 days, while the fathers had 24 days.

Only economically active persons are entitled to maternity leave and to maternity benefits. Among others are, for example, students and recipients of social assistance, etc.

When 16,795 children experienced that only their mother had maternity leave, this does not always mean that the father was not at home. He might not have been economically active, or he might have spent his holiday at home.

Figure 6 Maternity and paternity leave after birth. 2007

Table 145

Child care

Day carers, day-care institutions and school-based leisure-time activities looked after a total of 545,000 children under the age of 10 in October 2009.

The proportion of children in public organized child-care institutions was greatest for children aged 3-5. In this age group, 97 per cent of all children were looked after by day carers and day-care institutions.

The proportion of children who were looked after was 66 per cent for 0-2-year-old children and 83 per cent for 6-9-year-olds.

Only a few of the small children who were looked after were less than 1-year old – about 10,000 corresponding to 15 per cent, while 87 per cent of the 1-2-year-olds were looked after at day carers and day-care institutions.

Children and young people receiving assistance

At the end of 2007, 27,000 children and young people received assistance. The assistance includes placements outside home and various kinds of preventive measures. 13,000 children and young people were recipients of preventive measures, while there were 15,000 placements outside home.

More than 80 per cent of all placements are voluntary, i.e. with consent. More than half of all preventive measures are in the form of relief stays for children and young people living at home, and the share of children and young people who have a permanent contact person is increasing noticeably.

2

Health

Danes have one of the lowest life expectancies in Western Europe

Life expectancy is often used to measure the state of a population's health. In Denmark, life expectancy has stagnated, but since the middle of the 1990's the trend is again positive.

However, life expectancy in Denmark is still among the lowest in Western Europe. In 2008-2009, life expectancy was 76.5 years for men and 80.8 years for women.

There is no simple explanation for the stagnation in the Danes' life expectancy. Researchers point to both the Danes' lifestyle with regard to smoking, alcohol, diet and physical activity, as well as general conditions of life such as size of unemployment and initiatives made by the health-care authorities.

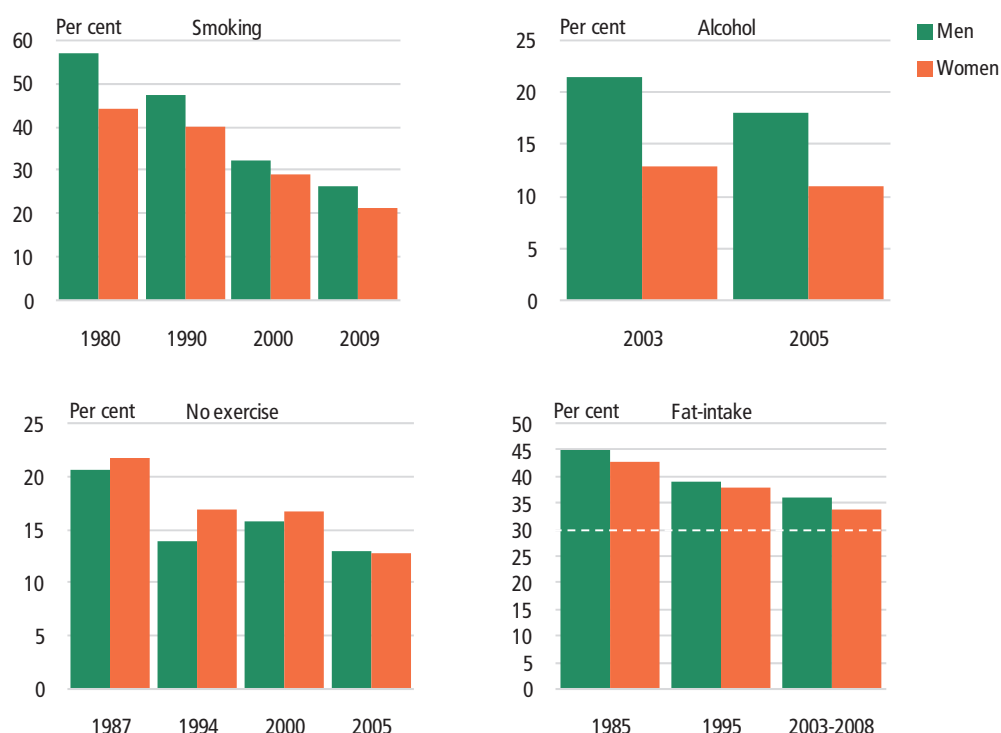

Danes' lifestyle

The proportion of the population who are smokers has fallen from about half of the Danes in 1980 to less than a fourth in 2009. During the whole period, the number of male smokers has been higher than the number of female smokers. However, this difference has fallen considerably.

It is recommended by the National Board of Health that men do not drink more than 21 alcoholic units per week and women not more than 14 units. In 2005, 18 per cent of all men and 11 per cent of all women stated that they had exceeded this limit.

In 1987, about a fifth of the population were not physically active in their leisure time. In 2005, this proportion had fallen to 13 per cent.

Experts recommend that maximum 30 per cent of total intake of energy stems from fat. In 1985, fat represented 45 per cent of the men's and 43 per cent of the women's energy intake. In 2003-2008, the shares were reduced to 36 and 34 per cent.

Figure 7 Danes' lifestyle

Note: Alcohol shows the percentage of the population who drink more alcohol than recommended by the National Health Board (21 alcoholic units for men and 14 for women).

Source: National Board of Health, Danish Heart Foundation, National Institute of Public Health, and Danish Institute for Food and Veterinary Research

Use of health services

In addition to life expectancy, health services are often used as an indirect method of measuring the health of the population. Information about the population's use of hospitals and National Health Service is stored in administrative registers in Denmark, which makes it possible to conduct statistical analyses.

Fall in the number of hospitals

In 2005, there were 49 general and 10 psychiatric hospitals in Denmark. This means that over a 10-year period the number of general hospitals dropped by 33 and psychiatric hospitals by two. A part of the fall is due to fusions of hospitals.

In 2005, there were a total of 20,100 hospital beds, of which about 1,600 were in psychiatric hospitals and about 18,500 were in general hospitals. Overall, the patients were in hospital for 5.8 million days, corresponding to 91 per cent occupancy of hospital beds. In psychiatric hospitals, occupancy of hospital beds was 91 per cent as well. There are about 1.2 million admissions a year to the hospitals. In addition, there are about 1 million visits to emergency and 6.2 million out-patient treatments.

One out of nine is hospitalized during a year

Approximately 621,000 people or 11.4 per cent of the population are hospitalized one or more times a year. The proportion of the population who have been hospitalized is lowest among 5-14-year-olds, less than 5 per cent, and increases with age. Thus, about one third of the population aged 85 and above is admitted at least once in the course of a year. The average number of days in hospital beds also in-

creases with age: approximately three days for 5-14-year-olds and approximately 13 days for 85-year-olds and above.

Little boys more frequently hospitalized than girls

Boys under the age of 10 are more frequently hospitalized than girls of the same age. Especially boys are more often admitted to a hospital because of respiratory diseases compared to girls. However, this difference is equalled out when they become teenagers.

The pattern of diagnosis

The most common cause of hospitalization for women is in connection with pregnancy, births, and abortions. When hospitalization due to birth, etc., is disregarded, diseases of the circulatory system and bodily injury and poisoning are the most common causes of hospitalization.

Approximately 84,000 persons are hospitalized annually due to diseases of the circulatory system and the equal number due to bodily injury, for each group corresponding to about 12 per cent of the hospitalized. However, there are marked differences between the different age groups: for example, 39 per cent of hospitalized 1-4-year-old boys and 34 per cent of 1-4-year-old girls are admitted because of respiratory diseases, and approximately 15 per cent of hospitalized 65-74-year-olds are admitted because of neoplasms.

Social differences determine use of hospitals

It appears that the use of hospitals is determined by social conditions. For example, adults who have completed education at third level (long-cycle higher education) use hospitals 35 per cent less than the average person, while adults without qualification from education use hospitals almost 30 per cent more than the average person.

Figure 8 Frequency of hospitalization by the dominant social benefit received by the family. 2006

Note: Children aged 0-17.

www.statbank.dk/pa10

Social conditions also affect children's use of hospitals. For example, boys and girls who live with families that have received social assistance benefits for at least six months use hospitals 19 and 18 per cent more, respectively, than the average child. As opposed to this, children who live with families that do not receive any type of social benefit use hospitals approximately 15 per cent less than the average child.

92 per cent used the National Health Service in 2007

All persons who live in Denmark are covered by the National Health Service and can therefore receive full or some compensation for all expenses related to visits to a GP, a specialist doctor, dentist, chiropractor, chiropodist, physiotherapist, etc. Approximately 5.1 million people or 92 per cent of the population made use of this in 2007, and every person had contact with a GP, a specialist doctor, dentist etc. 10 times on average. Slightly more women than men received national health benefits. About 4.7 million contacted a GP and 2.6 million persons older than 17 years contacted a dentist one or more times. Both eye and ear specialists were contacted by about 0.5 million people, and chiropractors by 300,000 people.

Figure 9
Expenditure on medication

Table 174

Source: Danish Medicines Agency.

Expenditure on medication increases

Approximately 40 per cent of the population use medicine regularly and approximately 60 per cent have used medication within a 14-day period. More women than men use medication and the use of medication increases with age. The most commonly used types of prescription medicine are analgesic medication (pain killers), medicine for lowering blood pressure and medication for the heart. The turnover of medicine has increased steadily during the last 10 years. In 1999, turnover accounted for DKK 8.7 billion and DKK 13.4 billion in 2009. This is equivalent to an increase of 54 per cent. In 2009, turnover of tranquillizers accounted for DKK 4.0 billion and drugs for the cardiovascular for DKK 1.8 billion.

Sharp increase in the number of cancer cases since the 1980s

In 2008, 33,645 new cases of cancer were registered, and by the end of 2008 there were about 213,000 persons who lived with a cancer disease. Among the new registrations, breast cancer was the most common form of cancer among women, and cancer in the neck of the bladder was the most common among men.

Figure 10 New cases of selected types of cancer among men

Note: The figures are calculated over a five-year period and have been standardised to comply with the Danish composition of population in 2000.

Source: National Health Board

In the course of the last 25 years, the annual number of new incidents of cancer, measured in relation to the size and age of the population, has increased by 19 per cent for women and 14 per cent for men.

Breast cancer was also the most common type of cancer among women 25 years ago. However, for men, lung cancer was the most common type of cancer.

Figure 11 New cases of selected types of cancer among women

Note: The figures are calculated over a five-year period and have been standardised to comply with the Danish composition of population in 2000.

Source: National Health Board

The number of AIDS patients has fallen drastically

In the period 1980-2009, a total of 2,763 people were diagnosed with AIDS. Of these, 2,028 had died by 31 December 2009. The number of diagnosed peaked in 1993 with 239 and hereafter it has generally fallen, except for an increase in 2001 and in 2004. In 2009, 32 persons were diagnosed.

Registration of HIV-positive patients did not begin until August 1990. Until the end of 2009, a total of 5,594 HIV-positive people were reported. The number of HIV-positive patients has fluctuated between 1995 and 2009.

Increase in the number of gonorrhoea cases

In 2009, the number of cases of gonorrhoea is higher than 10 years ago. The increase is primarily due to more cases among men. Men also account for by far the greater part (75 per cent in 2009) of the cases.

With regard to Chlamydia, it is just the opposite: approximately 62 per cent of all cases of Chlamydia are among women.

Figure 14
Reports under
the Penal Code by
type. 2009

www.statbank.dk/straf2 and straf22

Crime and the administration of justice

Justice includes statistics regarding crime and the administration of justice. The analyses of justice illustrate the rulings made by courts in criminal law suits and civil law suits.

Crime in Denmark is analysed as both reported crimes and criminal decisions in connection with violation of either the Penal Code, the Road Traffic Act or special acts, and the number of victims of certain offences against the Penal Code.

Crime statistics cover only reported criminal offences, whereas the so-called "hidden" crimes or underreported figures (i.e. unreported criminal offences) are not compiled.

The number of reported crimes is rising again

From 1950 to 1994, the number of reported criminal offences increased from about 110,000 to almost 550,000. Since then the number of reported criminal offences decreased until 2006 where 425,000 offences were reported. In the last few years the number of reported criminal offences has been increasing again and in 2009 the police received almost 0.5 million reports of crimes.

In 1950, the number of reported crimes corresponded to 3,500 reports per 100,000 inhabitants (older than 15 years) compared to 12,700 reports in 1994 and 10,900 in 2009.

The large increase in reported offences is mainly due to an increase in reported offences against property and misappropriations. They comprise, for example, burglaries in shops and houses, as well as car thefts and bicycle thefts, which are typically subject to insurance contracts, where a police report is a prerequisite of claiming damages from the insurance company.

The high number of burglaries and thefts should also be seen in the context of increasing wealth in society. There is a sharp increase in the possession of valuable objects, and many dwellings are left unoccupied in the daytime.

The decrease since 1994 has also occurred in the number of reported offences against property and misappropriations, where the decrease is primarily seen in the number of thefts and burglaries.

The decrease in the number of stolen cars is probably due to improved theft prevention in modern cars.

The increase since 2006 is mainly an increase in the number of burglaries, both in banks, shops, private homes and second homes. But also bag-snatching, pick pocketing, thefts of number plates and of bicycles have increased the last years.

Figure 15
Reported offences
against property

Offences against property

The number of reported offences against property each year makes up 90-95 per cent of the annual number of crimes reported.

In 2009, 465,000 offences against property were reported, which is less compared to the first half of the 1990s, when more than 500,000 offences against property were reported every year.

In 2009, there were 107,000 burglaries and 185,000 thefts, including 49,000 burglaries in houses and flats, and furthermore 17,800 car thefts and 79,300 bicycle thefts.

Violent crimes

The number of reported violent crimes (e.g. homicide, assault against the individual or public authority) has risen significantly since the Second World War, from approximately 2,400 reports in 1950 to 19,500 in 2006. In the last couple of years the number of violent crimes has decreased and amounted to 18,000 in 2009.

Almost 60 per cent of all reported acts of violence are assault against the individual, while the remainder is mainly violence, etc. against public authorities (15 per cent) and threats (20 per cent).

The dangerousness of violence against the individual is distributed to the following groups: *Simple violence*, *more serious violence* and *very serious violence*.

In total, there were 10,600 reported offences of these kinds in 2009. Simple violence is the most common (85 per cent) and has increased by 33 per cent since 1990.

In 2009, there were 264 reported homicides or attempts at homicide. In comparison the number was 234 in 1990. In 2009, 56 homicides were accomplished. Since 1990, there has been between 200 and 250 homicides or attempts at homicide on the whole.

Sexual offences

Sexual offences (e.g. rape or indecent exposure) fell in the last part of the 1960s (coinciding with the repeal of the Pornography Act), and has since then been steady at 2-3,000 reports a year with a slowly increasing tendency.

The number peaked in 2004 and has been decreasing since. 2,200 sexual offences were reported in 2009.

Figure 16
Reported violent crimes
and sexual offences

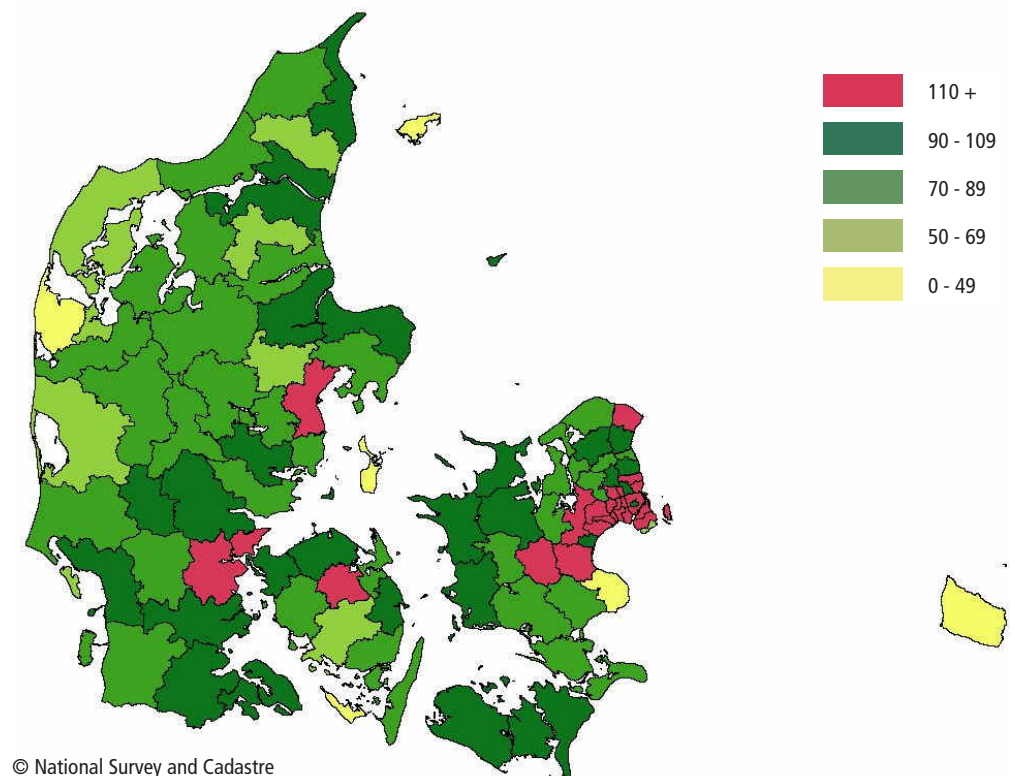

Nearly half of today's reports are of indecent exposure (48 per cent), while rape accounts for one-fifth of the sexual offences (19 per cent).

Highest number of reported crimes in cities and urban areas

There is no steady regional distribution of reported criminal offences in Denmark. Reported crimes are concentrated in cities and large towns and urban areas, whereas the number in rural municipalities is low – except for some municipalities with large summer cottage areas.

Figure 17 Reported criminal offences per 1,000 inhabitants. 2009

There are many reported offences against property and reported violent crimes in cities and urban areas, while summer cottage areas mainly account for burglaries and thefts.

Less than every five reports lead to a charge

Charges are pressed in less than every fifth of the 450-500,000 reports, either against one or several people.

In 2009, charges were pressed in 15 per cent of the reports. The charge rate typically varies according to how serious the crime is or its type.

Thus charges are normally pressed in connection with 75 per cent of violent crimes and 70 per cent of sexual offences, charges are only pressed in 11 per cent of offences against property.

Criminal decisions

Based on reports where the police have pressed charges and investigations have been closed as well as violations of the Road Traffic Act, almost 177,400 criminal decisions were made in 2008.

The accused was either fined, given a prison sentence or acquitted. The number of criminal decisions is primarily due to the number of violations of the Road Traffic Act.

In 2008, a little more than 44,800 rulings concerned the Penal Code, 108,200 concerned the Road Traffic Act and the remaining 24,400 concerned other special acts (e.g. Euphoricants Act, Police Regulations, Firearms Act or Act on Animal Welfare).

Figure 18 Criminal decisions, total, and convictions resulting in fine or prison sentence

In 2008, 177,400 decisions comprised a total of 242,300 criminal offences for charges committed by 145,000 different individuals, i.e. a number of individuals have received more than one ruling in the course of the year, just as several decisions comprise more than one charge.

Most decisions are fines

Of the 177,400 decisions in 2008, most of them were, by far (140,400), fines, of which almost three-fourths originated from violation of the Road Traffic Act.

18,500 decisions were prison sentences (lenient imprisonment or imprisonment), and the remaining 18,500 decisions include no charges, dropped charges or acquittal. 9,100 or about half of the prison sentences were unconditional in 2008.

Male offenders account for the greatest number of criminal decisions

Almost 80 per cent of all criminal decisions in 2008 involve men, but the proportion of violations by women is increasing. In 2008, 19 per cent of all criminal decisions concerned women compared to 9 per cent in 1980.

The proportion of violations against the Penal Code by women has increased during the same period from 15 to 20 per cent and against the Road Traffic Act from 6 to 21 per cent.

A minor proportion of the decisions (2 per cent) are against enterprises (such as violations of Road Traffic Act and environmental acts).

Increase in the number of women convicted of violent crimes

Since 1990, the number of women committing violent crimes has quadrupled from 329 to 1,243 in 2008. The increase is greatest for women in the age group 15-19 years, where the number has become seven times as great since 1990. Common assault and grievous assault account for the largest increase, but assault against public authority and threats have also risen.

The 15-19-year-olds also constituted a third of the decisions. 50 per cent or half of the women were below the age of 25 years.

Furthermore, the number of women sentenced to imprisonment in connection with convictions of violent crimes has quintuple since 1990 – a total of 546 in 2008. More than one fourth (28 per cent) was sentenced to prison.

Most violent crimes are committed by young men

In 2008, the average age of offenders was a little below 35 years – for men 35 years and women 38 years – but there are variations among the different criminal offences.

The lowest average age is that of violent criminals (29 years). More than one fourth of all violent crimes are committed by young men below 20 years – all in all 90 per cent of crimes of violence is committed by men.

The average age of persons committing sexual offences is somewhat higher and was 36 years in 2008. Similarly, the average age of persons committing financial crimes was higher.

The average age of persons having committed fraud against creditors, gross tax fraud, etc. or offences against legislation relating to taxation and excise duties ranged between 40 and 45 years.

Victims of criminal offences against the Penal Code

In 2009, more than 90 per cent of all victims of sexual offences were women, while nearly all sexual offences were committed by men.

In contrast, one third of all victims of violent crimes were women, but also here the overall part of the offences were committed by men.

The average age of the female victims of sexual offences was 19 years, and 13 per cent were less than 10 years. The average age of victims of violence was older.

Male victims were in average 30 years and female victims were in average 32 years. One per cent of the victims were less than 10 years, and less than one per cent were more than 70 years.

Note: Social expenditure is calculated according to a system for comparison of social expenditure between EU countries.

www.statbank.dk/udg1

¹ According to Eurostat's definition a benefit in kind is a social security benefit allotted as goods or services - a benefit in kind may be allotted directly or as cash payment, i.e. reimbursement against documentation of the actual expenses. ² Administration expenditure is separated from current expenditure as far as possible, and gathered as one item. ³ Includes state and municipality civil servant pensions and state supplementary payments to retiring civil servants. ⁴ I.e. pension funds and life insurance companies under the Danish Financial Supervisory Authority. ⁵ Including care and home help for pensioners.

¹ Includes all payments in the year, i.e. both closed cases and cases in progress at the end of the year.

www.statbank.dk/socdag

² The number of persons is calculated net, i.e. a person transferring from one type of absence to another within a group is only counted once. Persons, who have received sick-day and birth benefits, are counted twice ³ Cases where the public sector has taken over the obligations of the employer to pay sickness benefit. In other cases the employer must pay sickness benefit (the employer period) for the first 15/21 days. ⁴ Especially self-employed with a voluntary insurance.

60-64 years	113	95	94	82	90	86	76	100

Note: Hospitalization rate is the percentage of a given group in the population who have been admitted to hospital. The rates above are given as index figures where the rate for everyone in the age group is set at 100. The total hospitalization rate is standardized by age, i.e. it has been corrected for the distribution by age being unequal for the different education groups. Hospitalization rates are therefore mutually comparable.

www.statbank.dk/pa8

¹ Highest in progress or completed education as at 1.1.2007. ² Incl. persons with unknown education and persons with 1st year basic vocational education, etc. ³ Basic vocational education, part 2, apprenticeships, etc.

Note: The table covers consumption of drugs and medicines in the primary health-care sector and is based on information from the medicine statistics register kept by the Danish Medicines Agency. The amount consumed is calculated as DDD (defined daily dose) per 1,000 inhabitants per day, i.e. the thousandth parts of the population who could be treated daily by the amount of medicine consumed if the DDD was consumed. Turnover is calculated at sales price for the pharmacy including VAT and prescription charges.

Income, consumption and prices

1

Developments in income and consumption

Concepts of income

Income statistics comprise family-related as well as person-related statistics. The central concepts are *family income* and *personal income*.

Family income is the sum of the following income types: Earned income, property income, transfer income and other family income and personal income is the sum of: Earned income, property income, transfer income and other personal income.

Couples with children earn most

When considering families, couples with children had the highest average income pre-tax of DKK 788,800 in 2008. The corresponding figure for couples without children was DKK 551,300.

When making such comparisons, it should be noted that couples without children are normally older than couples with children and that children may contribute to total family income to some extent.

Figure 1 Average family income. 2008

Table 200

Men earn more than women

In 2008, the average personal income for persons aged 15 and above was DKK 278,500. Men had larger incomes than women as men's average income was DKK 319,000, while that of women was DKK 239,400.

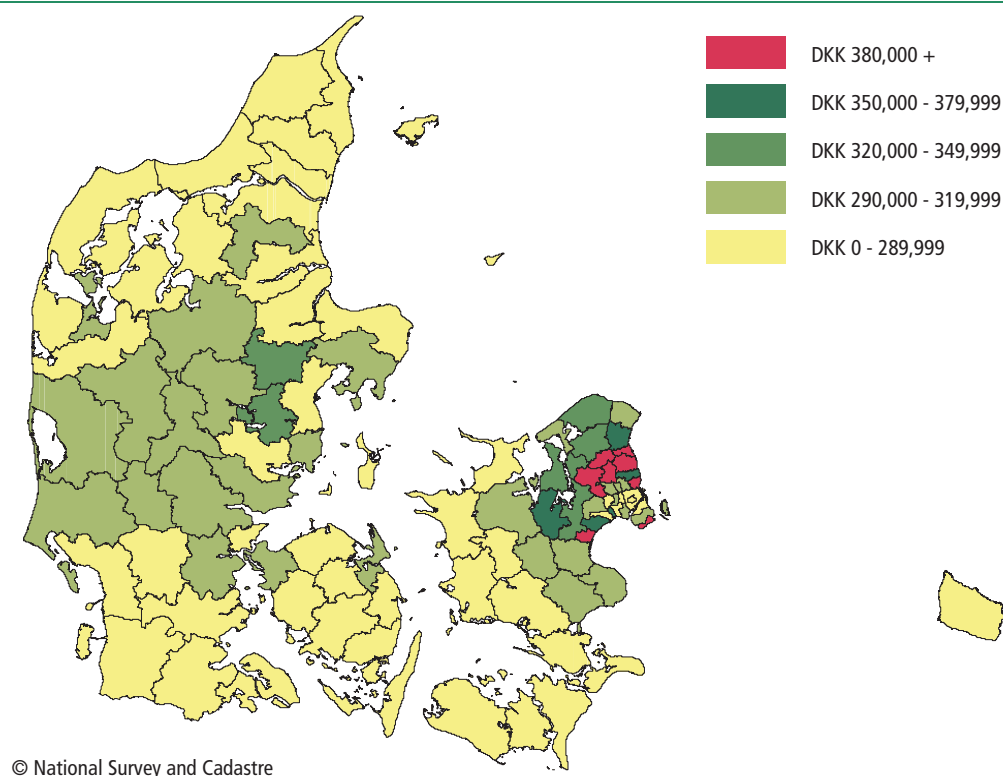

Figure 2 Average personal income by age group. 2008

Table 207

Wealthiest municipalities north of Copenhagen

Average family income after taxes, i.e. the disposable family income, was DKK 289,300 in 2007. The highest average disposable family incomes were recorded in the municipalities north of Copenhagen Municipality. Family income was DKK 462,300 in Rudersdal and DKK 454,000 in Gentofte. The lowest average family incomes were found in Copenhagen with DKK 230,400.

Figure 3 Average family income in municipalities in DKK. 2008 - correction

Personal income by socio-economic status

When considering disposable personal incomes as they relate to socio-economic status, it is seen that only 1.1 per cent of all top-level managers (salaried employees at upper levels) made less than DKK 100,000 in 2008. When considering the other end of the scale, 98.0 per cent of all students and 38.2 per cent of all recipients of cash benefits had incomes of less than DKK 100,000.

Figure 4 Distribution of disposable personal income by socio-economic groups. 2008

Denmark accounts for the greatest even income distribution

The Gini coefficient is used for measuring the way in which income in a society is distributed. The Gini coefficient shows the share of total incomes that has to be redistributed in order to achieve complete evenness. The more uneven the distribution, the greater the Gini coefficient is in the country.

Figure 5 Gini coefficients in EU. 2008

Source: Eurostat.

If the value of the Gini coefficient is 0, incomes are completely evenly distributed – i.e. everybody has exactly the same income. However, if the value is 100, incomes are completely unevenly distributed, i.e. one person accounts for all income in the country. The figures show that Denmark is among the EU27 countries with the most evenly distributed income in Europe.

2

How is income spent?

The main part is spent on consumption

The household budget survey carried out by Statistics Denmark, which involves a study of private household finances, makes it possible to see how total household income is spent. According to the somewhat wider concept of income in the household budget survey, an average household had a total income of DKK 564,369 in 2007.

However, a large part of this income was not at disposal of the household due to income tax, etc., and any interest payable on household debts (including mortgages) – DKK 215,957. The amount left to average households was DKK 348,413. The main part of this amount was spent on consumption – DKK 308,033 – while DKK 31,680 was used for savings (including pension savings and savings tied up in real property). The remaining DKK 8,700 was spent on membership fees, gifts, and charity.

Figure 6 How income is spent in selected households – per cent of total income. 2007

Employees households used half of their total income on consumption

In 2007, self-employed and employee households constituted the groups where consumption accounted for the smallest percentage of the total income.

Pensioner households and other households made up of persons not economically active (social security recipients, students, etc.) were characterized by spending a considerably greater percentage of their income on consumption than self-employed and employee households. Pensioners and other households were also characterized by having negative savings.

Great differences in households

When assessing these differences, it should be noted that households vary greatly in nature. Households in which the main breadwinner is an employee or self-employed are significantly larger than other households. These types of households are home to 2.6 and 2.3 persons per household on average, respectively, whereas the corresponding figure for pensioners' households is 1.4 persons and for other households 2.0 persons per household. Total income is significantly lower in households not economically active: The average income of pensioners' households is DKK 310,445, while that of households with other persons not economically active is DKK 255,026.

Employee households have the highest increase in consumer spending

From 2002 to 2007, employee households have accounted for the greatest increase in consumer spending (33 per cent), followed by households not economically active (29 per cent) and pensioners (26 per cent), while the consumer spending of the self-employed has increased by 20 per cent. The varying developments for the different groups can largely be attributed to the varying developments of the groups as a whole and to a lesser extent to the possible changes in the composition of each group. The statistical data are compiled at current prices, implying that inflation is not taken into account.

Figure 7 Change in consumer spending from 2002 to 2007

Most money was spent on housing

Housing constituted the largest single consumption item as housing consumption accounted for 20 per cent of total consumption in 2007, i.e. rent in rented accommodation and imputed rent in owner-occupied housing, plus maintenance, etc., not including an additional 7 per cent for heating and electricity. 18 per cent was spent on transport, etc., while food, beverages, and tobacco accounted for 13 per cent. Other goods and services, which includes expenditure on education and child care, restaurants and hotels, various services, insurance, etc. accounted for 15 per cent.

Recreational equipment and entertainment accounted for 13 per cent, while clothing and footwear accounted for only 5 per cent.

Figure 8 Consumption by goods/services. 2007

www.statbank.dk/fu5

Danes spend less on food and more on housing

The composition of consumption has undergone major changes over a long period of time. Since 1979, the consumption of food, beverages and tobacco has fallen from 24 per cent of the total consumption of private households to 14 per cent in 2009. Conversely, expenditure on housing, heating, and electricity has increased from 24 per cent in 1979 to 28 per cent in 2009. The consumption of clothing and footwear has fallen from 6 per cent in 1979 to 4.5 per cent in 2009, while expenditure on transport and communications has dropped over the last 10 years from 15 per cent to 12.7 per cent.

Figure 9 The share of selected consumption items of total consumption

www.statbank.dk/nat05

We drink more wine at the expense of beers

The Danes are drinking less beer while they drink some more wine. The consumption of beer was in 2008 with 520 million litres – 4 per cent less than the year before – a trend that repeats itself for the third consecutive year. Compared to 2003 the consumption of beer has fallen 13 per cent. The consumption of wine last year

rose with 3 per cent to 184 million litres. The consumption is only 1 per cent higher today than in 2003.

Overall alcohol consumption declined in 2008. The average consumption of pure alcohol per citizen over 14 years is reduced with 3 per cent compared to the previous year. In 2008, every inhabitant over 14 years drank in average 11.7 litre pure alcohol, equivalent to 15 drinks a week. One drink equals 1.5 cl pure alcohol. Compared to 2003, where we drank 13.1 litre pure alcohol or almost 17 drinks a week, the average alcohol consumption has been reduced by 11 per cent.

Figure 10 Total consumption of dutiable alcohol

In 2008 we smoked, on average, 43 cigarettes less than the previous year

The consumption of cigarettes, cigarillos and cigars decreased by 40 million units in 2008. This corresponds to every citizen over 14 years in average smoking 43 cigarettes less than the previous year. In the last five years the consumption of cigarettes, cigarillos and cigars has decreased by more than half a billion units which corresponds to every inhabitant over 14 years in average smoking more than 200 cigarettes, cigarillos and cigars less in 2008 than in 2003.

Figure 11 Consumption of tobacco

3

Households and the public sector

Indirect subsidies from the public sector

The household budget survey also calculates the value of the indirect public subsidies that households may be said to receive insofar as they utilize free or cost-reduced services in healthcare, education, and childcare.

On the other hand, part of all household consumption actually constitutes payments to the public sector insofar as such consumption is liable to VAT or other taxes/duties. The net result of such transfers back and forth between individual households and the public sector can be calculated as shown below.

Household transfers to and from the public sector. 2007

	Age Group					
	All	17-29	30-49	50-59	60-66	67 +
	DKK thousands					
Transfers to the public sector	252	161	318	294	276	140
Income taxes, etc.	180	107	229	214	204	94
VAT, duties, property taxes, etc.	72	54	89	80	72	46
Transfers from the public sector	146	117	153	102	161	185
Transfer income	83	53	55	68	143	138
Selected indirect transfers	63	64	98	35	18	47
Net transfers to the public sector	106	44	165	191	115	-45
Average household income	564	365	729	679	505	319

Here, households are divided into categories according to the age of the main breadwinner. When assessing these statistics, it should be noted that households in the younger as well as the older categories are relatively small, whereas households in the 30-59 age group are larger, usually comprising two economically active adults.

Income taxes, etc., also include subscriptions to unemployment insurance funds. Income transfers comprise a number of transfer incomes, including old-age pensions, cash benefits, sickness benefits, unemployment benefits, housing/rent benefits, and family allowances.

As mentioned above, *selected indirect transfers* include the most important services offered in healthcare, education, and childcare; subsidies for medical products have not, however, been included for practical reasons.

Net transfers to the public sector increase with age

It is clear that net transfers from households to the public sector increase with age until the age of 60. From this age onwards, it becomes common to receive early retirement benefits and old-age pension benefits, so for the oldest age group public transfers to households exceed the transfers made from households to the public sector in the form of taxes and duties.

4

Prices

Consumer price index and price index for domestic supply

The consumer price index shows the trend of the prices typically charged to consumers for goods and services. Real prices, including VAT and duties charged to consumers, are used for estimating price trends.

The trend in the consumer price index reflects a country's rate of inflation, whereas the price trend in the first chain of turnover is reflected by the price index for domestic supply.

Importers' real purchase prices, excluding VAT and duties, as well as producers' real sales prices, excluding VAT and duties, are used as the basis for estimating the price index for domestic supply.

Greater fluctuation in the price index for domestic supply

Generally, the price index for domestic supply fluctuates more than the consumer price index. This is mainly due to the fact that the price index for domestic supply includes a number of raw materials for which there are relatively great price fluctuations, and which are not comprised by the consumer price index.

Inflation peaked in 1974

In 1974, inflation peaked with an annual change in the consumer price index of approximately 15 per cent and a change in the price index for domestic supply of approximately 22 per cent. In 1980, the annual change in the consumer price index was approximately 12 per cent, while the corresponding figure for the price index for domestic supply was approximately 17 per cent.

The huge oil price increases during these periods affected the price index for domestic supply to a greater degree than the other indices due to the greater weight of fuels. The repeated devaluation of the Danish krone at the end of the 1970s was also instrumental in increasing import prices, which also have greater weight in the price index for domestic supply.

There was a fall in the price index for domestic supply in 1986-1987, 1992-1993 and 1998, while the consumer price index has increased during the entire period since 1970, which has resulted in higher prices charged to consumers.

Sub-indices for goods and services

Figure 13 illustrates the annual changes in the consumer price index by goods and services. Similar to the overall consumer price index, these indices reflect the high levels of inflation from the early 1970s to the early 1980s. The increases in the services index were greater than those in the goods index during the periods before and after the oil crises.

Since the end of the 1980s, the services index has been higher than the goods index in almost all years. This may be partly attributed to the fact that the services index to a greater extent than the goods index is influenced by developments in wages and salaries. In 2008 the prices on goods increases more than the prices on services, which to a great extent can be attributed to high price increases on food during the year.

Figure 12
Annual changes
in price indices

pris10

Figure 13 Annual changes in price indices

The housing index, the food index, and the transport index

Figure 14 shows the annual changes in three of the sub-indices of the consumer price index: The housing index, the food index, and the transport index. Generally, these sub-indices show the same overall trend as the consumer price index, i.e. greatest change during the period around the two oil crises.

From 2002 to 2006, the growth rate on food prices has been lower than that of housing and transport. In 2004, food prices were decreasing, while they in the following years have increased more and more.

In 2008 the food prices increased 7.6 per cent. In 2009 the food prices decreased again, while the index for housing only rose a few percentages. The index for transport decreased a few per cent in 2009 particularly as a result of lower gasoline prices.

Figure 14 Annual changes in selected sub-indices

Greatest changes in consumer prices since 2000

Figure 15 shows the commodity and service groups that account for the greatest falls or increases in prices from January 2000 to January 2010. During the period, there was a fall of 94 per cent for telephones. Especially, mobile phones have been instrumental in reducing prices.

There is also a sharp fall in computers (-71 per cent) and photographic equipment (-67 per cent). During the period, radio and TV accounts for a fall of almost 44 per cent, while there was a fall in prices for potatoes of 33 per cent.

Figure 15 Percentage change in consumer prices. January 2000 - January 2010

Education increased by 74 per cent, due to, among other things, a reduction in subsidies allocated to evening schools. Car insurance has increased by 74 per cent since 2000. During the period, water rates increased by 81 per cent, and garden work, etc. has increased by 83 per cent and home service (e.g. cleaning activities and window cleaning) has increased by 90 per cent. The increase for the last two service groups is mainly due to the abolition of subsidies allocated to home service.

Generally speaking, goods with a highly technological content account for the highest falls in prices since 2000, while services account for the highest increases.

International comparison of price trends

Until the middle of 2001, inflation in the EU and the United States ranged around 2 per cent and 4 per cent. From 2001 to 2004, inflation has ranged at a lower level, between 1 per cent and 3 per cent.

Since the beginning of 2004 and until the middle of 2006, inflation has been somewhat higher in the United States, compared to the EU, while Denmark has, on average, accounted for a considerably lower rate of inflation than in the EU.

In the second half of 2007, the inflation in the United States, the EU, Denmark and Japan rose considerably, mainly due to globally rising food and energy prices. This increase slowed down in the last months of 2008.

The increase has been modest in 2009 – USA and Japan have even experienced deflation in several months in 2009.

Figure 16 Inflation in EU, Denmark, USA and Japan

5

Price trends for sales of property

Falling prices replace sharp growth in dwellings

Prices of dwellings increased from the beginning of the 1990s until 2006, when the first indications of price falls began to appear.

From 2007 to 2008 the prices of one-family houses decreased by 9.0 per cent. During the same period, prices on weekend cottages and owner-occupied flats decreased with respectively. 3.9 per cent and 3.6 per cent.

General economic statistics

1

The Danish business structure

Continued importance of service sector

The Danish business structure has experienced comprehensive changes in recent decades. Denmark has gone from an agricultural and industrial society to a society where services are the dominant activity.

At the turn of the millennium, almost three fourths of all employed persons were working in the service sector. Services include private services in the form of trade, transport, finance, Knowledge-based services and personal services as well as public services. The growth of the service sector has continued in the new millennium.

The development can be illustrated by looking at the enterprises' turnover figures during the period 2001-2009. The total growth in the business turnover is 42 per cent until 2008, and consequently decreased to a level of 22 per cent above the 2001 level in 2009. The business turnover in all the industries shown increased until 2008 and consequently decreased, but there are great differences from one industry to another. Business services have increased by 73 per cent in the period until 2008, but have fallen to the level of 65 per cent above the 2001 level in 2009. Construction experienced a considerable growth of 50 per cent in turnover until 2007 followed by a marked slowdown in 2008. In 2009, construction saw a major fall in turnover to a level of 18 per cent above the 2001 level.

Figure 1 Development in total turnover. Selected industries

Note: The turnover figures are in current prices.

Enterprises and workplaces

Business structures are described by using two business levels: Enterprises and workplaces. The enterprise is the superior level, which is legally and financially responsible for the operation of the enterprise.

A workplace is an organizationally delimited part of an enterprise at a given address, which produces one – or mainly one – type of goods or services. Thus, workplaces are the sites where the physical production of the goods or services takes place.

Number of enterprises

There are 305,300 enterprises in Denmark engaged in a real activity. Trade and transport account for most of these enterprises (21 per cent) as well as Business services (14 per cent), while 13 per cent of the enterprises have their main activity in agriculture, forestry and fishing. 7 per cent have their main activity in manufacturing, mining and quarrying.

Figure 2 Enterprises by industry. 2007

www.statbank.dk/gf5

Figure 3 Number of full-time equivalent employees by enterprise size. 2007

www.statbank.dk/gf3

Financial and insurance sector accounts for the largest enterprises

The Danish business structure is characterized by many small enterprises with less than 10 full-time employees (92 per cent). Nevertheless nearly 1.4 million full-time employees – or 61 per cent of all full-time employees – work in the largest enterprises with 100 or more full-time employees.

The private industry with the largest concentration is financial and insurance where 82 per cent are employed in the largest enterprises, while this group accounts for only 6 per cent of the full-time employees in agriculture, forestry and fishing.

Turnover and exports

Danish enterprises had a total turnover of DKK 3,361 billion in 2007. Of this amount, exported goods and services accounted for DKK 782 billion. The remaining goods and services were sold in Denmark.

Enterprises in manufacturing account directly for 41 per cent of all sales of goods and services abroad. Processed goods from agriculture and fishing account for a considerable part of manufacturing exports.

This fact and the circumstance that unprocessed goods from these primary sectors are exported through trading enterprises is the reason why exports directly from agriculture, fishing and mining and quarrying are very limited (DKK 3,479 million).

Construction is primarily oriented towards the domestic sector, as exports account for only about 1 per cent of total turnover.

Foreign-owned enterprises in Denmark

Foreign-owned enterprises account for 19 per cent of total employment though they make up only 1 per cent of the total number of enterprises in the private sector in Denmark.

The 3,583 enterprises had 290,000 employees (given as full-time employees) and had a turnover of DKK 793 billion – corresponding to 24 per cent of the total turnover in the private sector.

The transport, post and telecommunications sector and the manufacturing sector are with 27 and 23 per cent, respectively, the industries with the largest shares of employees employed in foreign-owned enterprises.

The construction sector (7 per cent) and other services sector (9 per cent) are the sectors with the smallest shares of employees employed in foreign-owned enterprises.

Enterprises owned by foreigners are, on average, far larger than enterprises owned by Danes. On average, there were 81 employees per enterprise in foreign-owned enterprises in 2007, while there were four employees per enterprise in Danish-owned enterprises.

Figure 4 Foreign and Danish owned enterprises by share of employees. 2007

Table 235

73 per cent of the employees in the foreign-owned enterprises work in enterprises owned by other EU countries.

Sweden and United Kingdom account for the largest shares of ownership, and enterprises owned from these two countries account for 30 and 15 per cent, respectively, of the total employees in foreign-owned enterprises in Denmark.

Figure 5 Foreign-owned enterprises by share of total turnover. 2007

Small increase in the number of new enterprises

New enterprises are an important factor in a dynamic business structure as they are instrumental in creating economic growth by offering new jobs and renewing production processes and product innovation.

In 2007, more than 36,700 new enterprises were established, while the number in 2006 was just above 36,300. Of these, one third was in financial and business services, while only 4 per cent of the new enterprises were in manufacturing.

Figure 6 New enterprises by industry. 2007

www.statbank.dk/demo4

The new companies are vulnerable in their first years of existence. Slightly less than a quarter of the new established companies in 2006 were no longer active in 2007. More than 56 per cent of the new companies established in 2004 had survived to 2007.

In this period of time, the largest share of surviving enterprises is found in construction where 65 per cent of the enterprises survived the first two years in business.

In 2007 fewer enterprises closed down than were established. In total 36,157 enterprises closed down in 2007. The final total will be somewhat lower since enterprises restarting in 2008 are not yet known and hence cannot be subtracted.

2

Value added

Creation of low value added in distributive trades

It is important that enterprises have a high value added in order to maintain a welfare society. Enterprises' value added, i.e. total current revenue less consumption of goods and services, is spent on, among other things, wages and new investments.

In 2007, Danish enterprises had an average value added percentage of 27 in relative terms compared to total current revenue. Hotels and restaurants (42 per cent) and business services (44 per cent) had a high ranking, while wholesale and retail trade was below average (13 and 19 per cent, respectively).

The low percentage profit in trade is due to the fact that enterprises in these industries resell products without changing them. Consequently, the work performed per DKK earned is considerably less in trading enterprises than in enterprises in other industries, and profits are lower in relative terms compared to turnover.

Figure 7 Enterprise results. Selected industries. 2007

Table 234

This is reflected in the accounts so that the consumption of goods and services account for a very large part of the turnover in trading, while the other service industries as well as mining and quarrying have a relatively low consumption of goods and services.

On the other hand, wages account for a large part of the costs in the service sector as well as in manufacturing and in construction.

3

Workplaces

Most workplaces are small

Denmark has a little more than 300,000 permanent workplaces. Almost half of the workplaces are situated in Jutland, while about 30 per cent are found in the metropolitan area. A little more than 3.1 million jobs are being performed at these workplaces.

On average, there are about 10 jobs per workplace, but the size of the workplaces varies much. A great majority of the workplaces are small. Two thirds of the workplaces have less than five jobs, and only a little more than 9,000 workplaces in Denmark have 50 or more jobs.

The large workplaces are concentrated around the major cities. About 15 per cent of the workplaces with 100 or more jobs are situated in Copenhagen Municipality.

Figure 8 Workplaces by industry and size. 2007

Table 237

Workplaces are very small especially in agriculture and fishing as more than 90 per cent of the workplaces in these industries have fewer than five jobs. Most workplaces comprise only one job, and the person working at such workplaces is usually the owner himself.

Figure 9
Number of jobs
by sector. 2007

The largest workplaces are found in manufacturing and in services. As regards services, large workplaces are particularly common in public service activities.

One third of all jobs are public sector jobs

A little more than one third of all jobs in Denmark are found in the public sector which comprises general government as well as publicly owned companies.

General government accounts for 30 per cent of all jobs, whereas publicly owned companies account for 3 per cent of all jobs.

The private sector is almost twice the size as almost two thirds of all jobs are in private enterprises.

Social institutions account for a little more than one third of all jobs in the public sector. Almost 25 per cent of the jobs are found in the educational sector while about 15 per cent of the jobs are found in public administration.

4

Research and development (R&D) and innovation

Research and development as well as innovation activities are important factors for the development of the competitiveness of the firms and, consequently, for economic growth in society.

The creation of new knowledge and its subsequent use in the enterprises are important factors for the dynamics and innovation of the business sector by way of introducing new products and production processes.

Figure 10 R&D expenditure of the public and private sector

Source: Danish Centre for Studies in Research and Research Policy

The private sector contributes with two thirds of total R&D-expenditure

R&D activities take place both in the private and the public sector. Total Danish R&D expenditure in the public and private sector has more than doubled in the period 1998-2008 and has been estimated at DKK 52 billion in 2008.

The private sector's share of total R&D expenditure has been approximately two thirds during the period 1998-2008.

Manufacturing and business services account for the highest R&D expenditure

R&D expenditure is particularly high in manufacturing, and total expenditure on own R&D activities reached DKK 15.4 billion in 2008. This amount corresponds to 44 per cent of the private sector's expenditure on R&D. Enterprises in business services, e.g. accounting, architects, research and development and advertising, accounted for an R&D expenditure amounting to DKK 8.5 billion, which corresponds to about one fourth (25 per cent) of R&D expenditure in the private sector in 2008.

Figure 11 Percentage of innovative enterprises by industry. 2006-2008

Source: Statistics Denmark

42 per cent of all enterprises are innovative

The greater majority of Danish enterprises do not carry out research and development activities. Instead, they attempt to increase their competitiveness by introducing new products and production processes, or by introducing new organisational methods or marketing initiatives, i.e. innovation. 42 per cent of the Danish enterprises have introduced innovations during the period 2006-2008.

Innovative enterprises are found primarily among businesses in information and communication and in financial and insurance where 58 per cent and 56 percent respectively, innovated during 2006-2008.

The innovation activities of Danish enterprises are characterized by large industrial variation. Enterprises in information and communication, manufacturing and trade have more innovation in products than in processes, whereas enterprises in construction, transport and financial and insurance to a larger degree introduce new production processes.

Total innovation expenditure amounted to DKK 48.3 billion in 2008, of which 34.9 billion was used for own R&D. In addition Danish enterprises purchase of R&D-services amounted to DKK 11 billion in 2008.

Agriculture, forestry and fishing

1

Agriculture in Denmark

EU agricultural policies and their influence on statistics

Denmark and the other EU Member States lay down the EU agricultural policies, which constitute the overall framework for Danish agriculture. The collective agricultural policies exercise a direct and indirect influence on the incomes and decision-making behaviour of Danish farmers, and thus on the requirements made in relation to agricultural statistics.

Falling significance to the Danish economy

Agriculture accounts for a falling share of the national economy due to an increase in the size of other sectors. While the relative importance of agriculture in terms of employment and overall economy has declined, agricultural production has increased in both scope and value. Agricultural exports continue to constitute an important part of exports, with pork as the most important product.

The structure of Danish agriculture – fewer, but larger farms

Throughout many years, structural trends within Danish agriculture have been marked by a steady annual decline in the number of farms. In 2008, the number of farms in Denmark constitutes 47,000 with at least 5 hectares of farm area, which has almost been halved over a period of 20 years. The average farm size is currently 62 (correction) hectares, which is far above the EU average.

Figure 1 Number of farms by area

www.statbank.dk/bdf and bdf07

Nevertheless there are still many small farms in Denmark. Farms which are smaller than 30.0 hectares do in fact constitute a small majority of all farms, namely 54 per cent. This share was 61 per cent 20 years ago. Medium sized farms between 30.0 and 74.9 hectares constitute 21 per cent – 32 per cent 20 years ago. Finally the group of big farms of at least 75.0 hectares amounts to 25 per cent of all farms where the share of big farms was 8 per cent in 1988.

Agricultural area by crop type

Danish agriculture is characterized by a wide variety of activities with one dominating goal: the production of food. Naturally, this variety is reflected in the use of the arable area, which comprises the production of crops used for human consumption and production of fodder for livestock which is used for food of animal origin. Cereals are far the most important crop with 56 per cent of the total agricultural area.

Figure 2 Total arable area by crop type

www.statbank.dk/afg and afg07

The figure above shows the distribution of the arable area by different crops. Please note that the category *other* includes industrial seeds, seeds for sowing, horticultural products, and other areas, while *grass and green fodder* includes areas in rotation as well as areas that are not in rotation, including permanent grasslands and set aside area. More than half of the agricultural area is used for cereal production, whereas between 20 and 30 per cent is used for production of green fodder for livestock. During the period, there is a great fall in pulses and root crops and almost a similar increase in grass and green fodder, which is primarily due to that fodder beets have been replaced by maize for silage.

Greenhouses also account for cultivation, primarily flowers, ornamental plants, different vegetables and mushrooms. The total green house area is around 500 hectares.

Crop production

Naturally, crop production is closely connected to area use. As mentioned above, the majority of the area is used for cereal production, with the primary types of grain being barley and wheat. Thus, cereals account for the majority of total crop production, while crops for cattle feeding are the second most important activity.

Crop production can be divided into three groups: Products used as foods, either directly or after processing; products used for livestock fodder; and a third group which comprises flowers, plants, and other non-food crops.

Figure 3
Crop production

* Foreløbige tal

www.statbank.dk/hst6

The group of foods that can be used directly comprises potatoes for human consumption, fruit, berries, and vegetables grown on fields and in greenhouses, while potatoes for flour manufacturing, beets for sugar production, and parts of the production of cereals and seeds for industrial use must be processed before being used as foods. Crop production constitutes a natural basis for agricultural livestock production, as it is the primary source of fodder for livestock. In addition to cereals, of which a large part of production is used as pig fodder, a large variety of grass and green fodder crops are grown for cattle fodder. Figure 3 illustrates the development trends in recent years as regards total crop production, except fruit, vegetables and other horticultural products.

Livestock and livestock production

Figure 4 illustrates the development trends within livestock farming, as represented by the degree of specialization within the two main types of livestock farming: cattle farming and pig farming. Since the 1960s, many-sided farming has been replaced with specialised farming. More than 50 per cent has neither cattle nor pigs, while only 3 per cent of the farming has both cattle and pigs – against 70 per cent in 1968.

Figure 4 Degree of specialization

www.statbank.dk/komb and komb07

Livestock density indicates the environmental impact

Livestock density is a measurement of the number of livestock converted to livestock units (LSU) in relation to the area suitable for fertilization. Livestock units reflect the quantity of nitrogen in the slurry, while the area suitable for fertilization is the land where the slurry can be spread.

The livestock density was 0.82 LSU per hectare in 2008, when it is calculated in proportion to the total area where it can be spread. This is a decrease of 0.01 LSU compared to the level in 1990. The increase in LSU took place from primarily 1992 to 1993, and since then there has only been a minor increase in livestock density. The reason is that in order to apply for crop subsidies it was required to set-aside land, and thereby the area suitable for fertilization was considerably reduced. The fall in the livestock density from 2002 to 2003 is due both to changes in the factors for calculating the livestock units and the amount of livestock.

Figure 5 Livestock density

www.statbank.dk/brug6, brug66, brug4 and brug44

Since 1990, the contribution by cattle to livestock density has decreased slowly, while the contribution by pigs has increased. In 2008, pigs accounted for a somewhat larger contribution to live stock density than cattle.

A great majority of the fertilization production stems from cattle and pigs, as the contribution of the livestock categories together accounted for 95 per cent.

The fall in the contribution to livestock density by pigs from 2002 to 2003 is due to the above-mentioned change in the calculation of livestock units.

Figure 6 Production and exports of pork

www.statbank.dk/ani5 and kn8y

Pork production is the most significant factor in financial terms

Through many years, the number of farms with livestock has been reduced, but this does not entail a reduction in the number of farm animals.

For example, the stock of pigs increased from 10 million in 1980 to almost 13 million now, and the average number of farm animals at each farm increased from 150 to more than 2,200 during the same period.

As the number of farm animals has gone up, efficiency has increased at pig farms, and these facts combined make pork production in financial terms one of the most significant single element in Denmark's agricultural production.

In addition to the total production of pork, figure 6 also shows pork exports. Denmark is one of the world's leading exporters of pork.

Milk production

Economically, the second largest type of agricultural production is milk. Since the middle of the 1980s, the quantities of milk produced have been determined by an EU country quota, which has changed only slightly over the years. During the same period, the stock of dairy cows has fallen by one third.

However, the increase in the average milk yield means that production has remained constant at 4.5 billion kg. During recent years, part of this milk production

has come from organic farming and accounts for 9 per cent of all milk delivered to dairy plants.

Figure 7 Average milk yield per dairy cow

Note: Statistics Denmark calculates average milk yields on the basis of the total stock of dairy cows and the total milk yield. Inspectors calculate the yield from the periodic yield inspection, which covers approximately 88 per cent of the total stock of dairy cows.

Table 257

The financial position of the agricultural sector

The financial circumstances of the agricultural sector can be described by preparing sector accounts for agriculture. The sector accounts can be briefly described as a statement of the production value of the agricultural sector, less the production costs involved.

Three income concepts are used in the sector accounts: Gross value added at producers' prices, gross value added at basic prices, and gross value added at factor cost.

The difference in the three income concepts concerns incorporating the operating subsidies received by the agricultural sector and the taxes and duties paid by this sector.

It appears from figure 8 that gross value added at factor cost has varied greatly over the past 10 years with a low point in 2003. The main reason is significant changes in the price of pork, which is the most important product and export article for Danish agriculture.

The difference between value added at producer and at basic prices, respectively, is primarily due to reforms of EU agricultural policies, where an adjustment from price subsidies to direct area and livestock subsidies was initiated in 1993.

From 2005, most of the subsidies are given as general subsidies as a consequence of the latest reform of agricultural policies.

Among EU countries, France, Italy and Spain, with about 16 per cent each, account for the largest share of total gross factor income in agriculture in the EU. Denmark

accounts for almost 2 per cent of gross factor income in the EU, while the consumption of labour in order to generate this income was only 0.5 per cent of the labour force in EU's primary agriculture.

Denmark received 2.3 per cent of EU's subsidies to agriculture from the Guarantee Fund of about DKK 400 billion.

Figure 8 Gross value added at producers' prices, basic prices, and at factor cost

Capital formation, liabilities and interest payments

In 2008, agricultural gross fixed capital formation reached DKK 12.7 billion and was consequently 1.7 billion lower than the previous years. About half of it was spent on new machinery and equipment, and the remaining part was spent on buildings and soil improvements.

The depreciation was DKK 9.8 billion so there is a positive net capital formation in the agricultural industry, which is also connected with the structural development. The figures exclude holdings specialised in horticulture or in furred animals.

At the end of 2008, farmers' liabilities are estimated at DKK 263 billion, and they have been increasing for several years.

In 2008, interest payments amounted to DKK 16.2 billion which is a large increase in comparison with the previous year. Higher interest rates and the use of new types of loan are the main reasons for the general higher interest payments, while liabilities are increasing.

6 per cent of all farms are organic

There has been a substantial increase in organic farming in Denmark during the last decade, but there has for some few years been a minor decline. In 2007, organic farms made up about 6 per cent of all farms, whereas the 100 per cent re-allotted organic area accounted for almost 5 per cent of the total agricultural area. In 1997 organic farms constituted 2.6 per cent of all farms, and the organic area was only about 1.4 per cent of the total agricultural area.

2

Forestry

Forestry censuses

Denmark has a long tradition for preparing forestry statistics at regular intervals. This provides a good overview of the forestry resources. The first forestry statistics were prepared around 1800, and a total of nine forest censuses have been carried out since 1881.

These statistics illustrate the development of forests as regards area, species mix, site quality, age range, etc.

Figure 9 Forest area, broadleaf and conifers

www.statbank.dk/skov1

Figure 10 Felling

www.statbank.dk/skov6

The Forestry Act

According to the Forestry Act of 2004, the Minister for the Environment is responsible for ensuring that national statistics within the forestry area are prepared. The latest published forest census took place in 2000, the date set on 1 January 2000.

A new feature of this census is the collection of information on forest-management planning and rejuvenation and establishment methods for the latest 10-year period.

Forest & Landscape has compiled the forest area in 2006 from a sample survey based on concrete measurements conducted in a large number of sample plots.

Differences in the compilation methods between the statistics in 2006 and the previous forest surveys imply that caution should in many cases be taken when comparisons are made between the surveys.

Figure 9 shows the long-term development in the forest area from 1881 to 2000. During this period, the Danish forest area was doubled – primarily by means of an increase in the area with conifers.

As regards future developments, the 1997 Nature Protection Act lays down a set of objectives which include an additional doubling of Danish forest areas during a period which corresponds to one generation of trees (approximately 100 years).

Forest production

Forest production of timber is measured by means of the annual felling statistics. For many years, production from conifers has been dominant. Almost half of the felling in 2005 was for energy purposes.

The damage caused by the storms in 1999 and 2005 has a marked effect on the felling of conifers. For many years, there has been a decline in the production of broadleaf. However, the latest figures indicate a minor increase.

3

Fishing

Common EU fishing policies

The common fishing policies of the European Union constitute the framework for Danish fishing. This framework includes a system that aims to preserve and utilize the biological resources of the sea through regulation of catches by quotas.

The fishing fleet

The Danish fishing fleet consists of the vessels registered in Denmark as fishing vessels. In order for a vessel to be registered as a fishing vessel, the Danish Directorate of Fisheries must authorize use of such a vessel for commercial fishing.

Developments in the number of Danish vessels for commercial fishing with a length of 6 metres and more are shown in the figure below.

Figure 11

The Danish fishing fleet

Table 266

Salt-water fishing

The total catch by Danish fishermen from salt-water fishing has fallen in terms of quantities during the period 1999-2009: from 1.3 million tonnes in 1999 to 700,000 tonnes in 2009.

In 2009, the value of the catch of DKK 2.1 billion was 32 per cent lower than in 1999 when calculated at current prices.

Figure 12 Salt-water fishing – total catch by Danish fishermen by quantity and value

Table 267

Fishing vessels

Statistics on the Danish stock of fishing vessels, fish resources and fishing, catches and fish market as well as the aquaculture are compiled by the Danish Directorate of Fisheries.

Manufacturing industries

1

The significance of manufacturing industries for Danish economy

Manufacturing industries' share of the economy has been declining

The significance of manufacturing industries for the Danish economy can be described by means of central statistics from the national accounts. Manufacturing industries have a declining importance for the Danish economy, regardless of whether it is measured by share of total employment, production or value added.

A share of 13 per cent of employment and value added

Manufacturing industries' share of total employment has declined markedly from 26 per cent in 1969 to 13 per cent in 2009. The manufacturing industries' share of gross value added has also decreased from 21 per cent to 13 per cent. Finally, the share of production has fallen from 31 per cent in 1969 to 19 per cent in 2009.

Figure 1 Manufacturing shares in per cent of total activity

Note: Mining and quarrying are not included.

www.statbank.dk/nat18

2

Manufacturing industries trends

Production in the manufacturing industries

Production in the manufacturing industries can be illustrated by means of an index of production calculated at constant prices. The business cycles of the period 2000-2009 are reflected in the index of production.

2000-2004

Manufacturing production increased in 2000 due to positive international economic trends. The decline in the world economy from 2001 affected Danish manufacturing production, which experienced a very modest increase in 2002 and 2003. The tendency continued throughout 2004 – affected by the weakened US dollar.

2005-2007

From 2005, the Danish manufacturing industry again experienced increasing production. This period of growth lasted until the middle of 2008 when a sharp decline set in.

2008-2009

During the last half of 2008, production fell rapidly, reflecting the economic crisis which has affected Denmark as well as the rest of the world. The decline has continued throughout 2009 and has been historically steep.

Figure 2 Production in the manufacturing industries, seasonally adjusted values

3

Exports of the manufacturing industries

Export shares of the manufacturing industries

Export markets are of great importance to the Danish manufacturing industries. In 2009, total export turnover accounted for 62 per cent of total turnover of the manufacturing industries.

Figure 3 Export shares of the manufacturing industries by groups of industries. 2009

There are wide differences among the groups of industries in the export shares of the manufacturing industries. The industries *wood and paper products and printing* and *basic metals and fabricated metal products* have the lowest export shares with, respectively, 26 and 41 per cent in 2009. With 91 per cent, *pharmaceuticals* accounts for the highest export share. This is followed by *manufacturing of electronic components* and *manufacturing of machinery* with 82 and 80 per cent, respectively.

4

Manufacturing industries' total turnover by main sectors

Manufacturing industries' sector profile in 2009

Since 2000, manufacturing industries' total turnover (at current prices) for enterprises with 10 employees or more have increased from DKK 476 billion to DKK 608 billion in 2009. *Manufacturing of food, beverages and tobacco* accounted for 25 per cent of the total turnover and had the largest turnover of all the industries. This was followed by *manufacturing of machinery* with 19 per cent and *manufacture of chemicals and oil refineries etc.* with 9 per cent. *Mining and quarrying* accounted for 8 per cent of manufacturing industries' total turnover.

Growth in manufacturing of machinery

Compared to 2000, *manufacturing of food, beverages and tobacco* is unchanged the dominant industry within Danish manufacturing. Two industries have, however, seen marked increases in their relative significance. These are *manufacturing of machinery*, especially production of windmills contribute to the growth of this industry group, and *mining and quarrying*. Industries that have less significance compared to 2000 are, among others, *transport equipment* and *textiles and leather products*.

Figure 4 Manufacturers' total turnover by groups of industries

www.statbank.dk/oms2

Concentration ratio of enterprises and commodity groups

Concentration of industrial enterprises

The three largest enterprises in the manufacturing industries account for 9.8 per cent of total turnover of the manufacturing industries, while the 10 largest enterprises account for 24.9 cent. The concentration ratio, i.e. the share of total turnover accounted for by a limited number of enterprises, differs widely among the groups of industries. Turnover is concentrated in a few large enterprises in particular within *pharmaceuticals* (the three largest enterprises accounted for 85.3 per cent of total turnover in 2009). *Manufacture of tobacco products, extraction of oil and gas, manufacture of leather and footwear and manufacture of dairy products* are other industries with high concentration ratios. Industries with low concentration ratios include *manufacture of other machinery* and *manufacture of fabricated metal products* where the 10 largest enterprises accounted for, respectively, 19.8 per cent and 21.9 per cent of total turnover in 2009.

Production in the manufacturing industries by commodity

The production of industrial products can be divided into about 100 main commodity groups, where the 10 commodity groups accounting for the highest output in Denmark in 2009 appear from figure 5. *Mineral fuel, etc.* accounted for almost 14 per cent of industrial turnover, while *boilers, machinery and mechanical apparatus* constituted more than 10 per cent.

Figure 5 The 10 commodity groups accounting for the highest output as a percentage of total turnover of the manufacturing industries. 2009

Table 270

10,000 different groups of commodities

The manufacturing of industrial products can be divided into more detailed commodity groups, of which there are a total of about 10,000. An overview of the 25 most commonly manufactured detailed commodity groups in Danish manufacturing industry is given in the tables section. Petroleum oil, windmills and medicines have prominent positions, but also natural gas, gas oils and structures of iron and steel feature near the top of the list.

Construction and housing

1

Housing conditions

The majority of dwellings are one-family houses

On 1 January 2009, there were 2.735.486 dwellings in Denmark. That is 25.189 more than the previous year. 58 per cent of the dwellings are one-family houses, 38 per cent are dwellings in multi-family buildings, while the remaining dwellings are other types of dwellings. Dwellings occupied by the owners make up just over half of the dwellings, while rented dwellings and dwellings owned by non-profit housing associations make up 47 per cent of the occupied dwellings. The remaining dwellings are not stated.

Fewer young people live in a privately owned dwelling

When looking at the way in which the Danish population live, it can be seen that 60 per cent of all persons live in a privately owned dwelling. Since 1981, this proportion has been relatively stable. The proportion of 20-39-year-olds living in a privately owned dwelling declined from 62 to 48 per cent during the same period. However, the proportion of persons aged 64 or older living in a privately owned dwelling has increased from 47 per cent to 54 per cent.

Figure 1 Persons aged 20 and over living in a privately owned dwelling

More space for each occupant

The average number of square metres per occupant was 52.1m² in 2009. However, there are differences as to the number of square metres available to an occupant of an owner-occupied dwelling and a rented dwelling where the figures made up 54.6 and 46.5 m², respectively.

The reason why there is more space for each occupant is that the size of households has decreased, while at the same time the size of dwellings has increased. The average household size has decreased from 2.5 persons in 1981 to 2.1 persons, and the average dwelling size has increased from 106.4 m² to 111.7 m² during the same period.

2

Heating of dwellings

District heating is most frequently used

Since 1981, the proportion of dwellings with district heating has increased from 34 to 61 per cent, while the proportion of oil-heated dwellings has decreased from 53 to 15 per cent. Natural gas, which was introduced in the beginning of the 1980s, is used in about 15 per cent of the dwellings. District heating is the most frequent type of heating in detached one-family houses and in multi-family buildings, where it is used in 42 and 88 per cent, respectively, of the dwellings.

Figure 2 Dwellings by type of heating

Note: 1 January.

www.statbank.dk/bol1 and [bol11](http://www.statbank.dk/bol11)

3

Residential construction

9 out of 10 dwellings are built after 1900

Of the total 2.7 million dwellings in Denmark, 9 out of 10 are built after 1900. 5 per cent of one-family houses, 14 per cent of the semi-detached or terraced houses and 6 per cent of the multi-family buildings are built after 2000.

Figure 3 Dwelling stock by year of construction. 1 January 2009

www.statbank.dk/bol33

4

Construction**Residential construction peaked in the 1970s**

In the late 1960s and 1970s, changed family patterns and increased welfare led to a great demand for dwellings – primarily one-family houses.

Consequently, the number of dwellings completed culminated from 1969 to 1974 and reached its peak in 1973 with more than 55,000 completed dwellings.

The economic growth in mid-2000s has again implied an increase in the number of dwellings completed from 2003 to 2007, where it peaked with 31.000 dwellings completed. It was primarily one-family houses, which account for the growth.

Since 2008, the crisis has resulted in a strong slowing down of the construction of dwellings, which in 2009 reached under 17.000 dwellings completed – same level as before 2003.

Figure 4 Dwellings completed

**Most square-metres for business purposes since 1980**

The decrease in construction from the mid-1970s is also evident if construction is calculated as total floor space completed. Until 1980, more square-metres were completed for residence each year than for business purposes.

Since then, the trend has changed and more square-metres have been completed each year for business purposes than for residence.

However, the increase in residential construction since 2003 years has implied that the number of square-metres completed for residence is close to the total floor space built for business purpose – and was higher in 2007.

The slowing down in construction of dwellings since 2008 has resulted in construction for business purposes once again being higher than the construction of dwellings, in spite of the fact that construction for business fall by 15 per cent from 2008 to 2009.

Figure 5 Construction in relation to floor space

5

Stock of buildings**Since 1990, the total area of buildings has increased by 19 per cent**

On 1 January 2009, the total area of buildings made up 709.3 million m² – of which 50 per cent is used for habitation, 40 per cent for industry and 10 per cent for cultural and recreational purposes.

Total number of buildings has increased by 5 per cent since 1990

Since 1990, the total number of buildings used for residential purposes has increased by 11 per cent.

The number of weekend cottages has increased by 13 per cent and semi-detached or terraced houses have increased by 34 per cent.

6

Construction's share of the Danish economy**Value added**

The significance of the construction sector in the overall Danish economy (measured by its proportion of the total gross value added) has fallen since the start of 1970s.

Since the mid-1990s, it has been stabilizing – the total gross value added has been about 5 per cent on an annual basis.

Construction employment

Since the end of the 1960s, the proportion of the construction sector with regard to total employment has constituted a continuously smaller part of total employment in Denmark.

Since the employment rate peaked in 1970 at 9.5 per cent of total employment, this proportion has declined to 6.5 per cent in 2008.

7

Construction employment by activity**Decrease in the total construction employment**

From 2004 until 2007 there has been an increase in the number of persons employed within construction. However, in 2008 this development changed as there were 174,000 employed in the construction industry compared to 181,000 in 2007 which is a decrease of 4 per cent.

In 2009, the decrease in the employment in the construction industry has been even larger. From 2008 to 2009 the employment has dropped from 174,000 employed to 151,000 – a decrease of 23,000 employees, corresponding to a decrease in 13 per cent in only one year.

The distribution of employment by activity

In 2009, the number of employed persons working on new buildings and extensions was 32,000 which is equivalent to 21 per cent. 54,000 or 36 per cent were engaged in repairs and maintenance, while 25,000 or 16 per cent worked on civil engineering projects.

An additional 5,000 were engaged in other types of work such as transport, stock maintenance and sales, while 23,000 were engaged in clerical work.

Figure 6**Construction employment by activity**

Note: The annual figures are a simple average of the quarterly surveys, where employment is calculated in the middle of the quarter.

www.statbank.dk/byg

8

Building costs**Increase and fall in total building costs**

In 2003, the previous regulating price indices for residential buildings were replaced by the present construction cost indices for residential buildings.

Besides the general indices for residential building, indices are now calculated for one-family houses and multi-family houses as well.

Total construction costs have increased by 100 per cent from 1987 to 2009, i.e. has doubled. During this period, the costs of materials have increased by 93 per cent and the costs of labour by 123 per cent.

Since 1987, the total construction cost had increased constant, but for the first time it fall by 0.5 per cent from 2008 to 2009. The cost of materials fall by 2 per cent, while the cost of labour increase by 4 per cent.

Figure 7 Regulating index for residential construction

Note: The figures from 1987 up to and including 2002 have been drawn from the *regulating price index for residential construction, total*, while the figures from 2003 onwards have been drawn from *construction cost index for residential construction*.

Note: Information is based on a combination of the construction and housing register (BBR) and the central person register (CPR). A household comprises the persons registered at the same address on the CPR. The table only includes households with known housing conditions. Known housing conditions for households and persons means that the same address is on both the BBR and CPR, while housing not known means that the address for households and people on the CPR is not on the BBR, or that there is no dwelling at the address on the BBR. Children are defined as unmarried, childless persons under 18 years of age who live at the same address as their parents.

Services sector and the information society

1

Structure of the services sector

Services sector continues to grow

The services sector comprises a number of different businesses with one thing in common: the production of services. These businesses include the wholesale and retail trade, hotels and restaurants, transport, telecommunication and postal services, financial services and business services, comprising ICT services, research and development, auditing and book-keeping, cleaning, leasing of machinery and equipment, temporary employment agencies, etc.

The services sector has experienced a 20 per cent increase in employment during the period 1992-1999, followed by a growth of 17 per cent from 1999 to 2007. In comparison, the number of persons employed in manufacturing declined by 3 per cent from 1992-1999. From 1999 to 2007 the number declined by 10 per cent.

Wholesale and retail trade account for the highest turnover and number of employees

The structure of the private services sector is illustrated in figure 1. In 2007, the greatest number of persons employed was found within the wholesale and retail trade which accounted for 326,000 full-time employees. Next was business services with 322,000 persons employed. In 2007, the wholesale and retail trade accounted for the greatest part of the services sector's overall turnover with 57 per cent, followed by transport which generated 20 per cent, and business services with 18 per cent. Business services accounted for 47 per cent, or nearly half, of the total number of business enterprises within the services sector. Wholesale and retail trade accounted for 28 per cent.

Figure 1 Employment, turnover and number of enterprises in the services sector. 2007

2

Retail trade**Steadying of retail sales in 2009**

Retail sales are divided into three categories: Food and other everyday commodities, clothing etc., and other consumer goods (equipment for accommodation and leisure). Food and other everyday commodities and other consumer goods each represent around 45 pct. of total retail sales. Clothing, etc. represents the remaining 10 per cent.

Retail sales were steadying in 2009. Following the dramatic decrease of 2008, the trend of 2009 was relatively flat. The index ended in December 2009 close to the level of December 2008, and the fluctuations of the intervening months were relatively small.

Comparing the total retail sales of 2009 with 2008 we see a total decrease of 4.6 pct. The category of other consumer goods saw the biggest drop with 6.1 pct., and clothing etc. dropped by 5.9 pct. The sales of food and other everyday commodities dropped by 2.6 pct. from 2008 to 2009.

Figure 2 Seasonally adjusted quantity index for retail sales

www.statbank.dk/deta21x

3

Tourism**Decrease in nights spent in 2009**

In 2009, the total number of nights spent in hotels etc., camping sites, hostels, marinas and holiday cottages was 41.4 million. This is a decrease of 3.3 million or 7 percent fewer nights spent compared to the previous year. Compared to 2008, there were 5 percent fewer nights spent by Danes and 10 percent fewer nights spent by foreigners.

The development in nights spent in 2009 showed a decrease in all areas. Holiday cottages leased by Danish rental agencies decreased with 11 percent. Hotels etc. went down 7 percent and hostels decreased 10 percent. Marinas had a decrease of

5 percent, while the camping sites experienced the smallest decrease with 3 per-cent fewer nights spent.

Figure 3

Overnight stays by type

* The statistics for holiday cottages 2008 is preliminary.

Note: Data is not comparable for marinas between 2006 and 2007 due to a change in crew size.

www.statbank.dk/turist

Danes on holiday and business trips

Adult Danes made 6,1 million holiday trips with at least four nights in 2008. Hereof, 64 percent were holiday trips abroad. Planes were the preferred means of transportation for travelling abroad, as 60 percent of the holiday trips were by plane. The Danes preferred the car on four out of five holiday trips in Denmark. For 43 percent of the trips in Denmark, the type of accommodation was family/friends, 20 percent were in own holiday dwellings, and 17 per cent were in rented holiday dwellings. Camping was also a popular way of going on holiday in Denmark with 11 per cent of all trips. The most popular type of accommodation abroad was hotels with 53 per cent, while 18 per cent stayed with family/friends.

4

The information society

About the information society

An analysis of the information society can be made partly via the supply side in the form of enterprises and employment in the ICT sector and partly via the demand side in the form of the use of information technology by enterprises, the public sector and by individuals. Statistics Denmark's publications on the information society are available at www.dst.dk/it.

The ICT sector

The ICT sector comprises enterprises that produce products and services within electronics, ICT, computer software, telecommunications, and other areas primarily based on information technologies.

The ICT sector can be divided into ICT manufacturing, ICT wholesale, telecommunications, and ICT consultancy services.

Small growth in employment in ICT manufacturing

In 2007, the Danish ICT sector employed a total of 96,707 full-time employees, which is a growth rate of 1,3 per cent compared to 2006. Consultancy services accounted for 48 per cent of the total employment of the sector and ICT wholesale for 19 per cent, while ICT manufacturing and telecommunications accounted for, respectively, 16 per cent and 17 per cent.

ICT manufacturing have experienced a growth rate of 2,3 per cent. ICT services have experienced a growth rate of 1,5 per cent.

Figure 5 Full-time employees in the ICT sector

Use of ICT by enterprises

At the beginning of 2009, nearly all enterprises had access to the Internet and almost nine out of ten enterprises had their own website. Eight out of ten enterprises also had a broadband connection to the Internet (i.e. ADSL or another wire-based connection).

Every third enterprise used e-learning e.g. by use of cd-rom or internet. More than one out of four enterprises used ERP software and about one in ten used open source operating systems.

Figure 6 Use of ICT by enterprises. 2009

Note 1: Based on data reported by more than 4,000 enterprises with ten or more persons employed.

Note 2: A broadband connection comprises ADSL and similar connections or another cable-based Internet connection.

www.statbank.dk/vita

Danes own more and more ICT goods

An increasing number of Danish families have personal computers, access to the Internet and mobile phones at home. In 2009, 86 per cent of families had access to a computer at home, compared to 60 per cent in 1999, ten years earlier.

Since 2000, penetration of mobile phones has passed penetration of PC's. In 2009, 98 per cent of Danish families had a mobile phone, compared to 68 per cent in 2000.

Figure 7 Families' access to ICT goods

Note: 1 January.

www.statbank.dk/varforbr

Access to the Internet at home

The number of devices that can provide access to Internet is increasing. Today, it is possible to access the Internet from a PC, a mobile phone, a game console or a TV set.

In 2008, 85 per cent of Danes had access to Internet from home. 62 per cent accessed the Internet from a desktop computer and 55 per cent had access from a portable computer.

In 2009, portable computers were for the first time the most popular devices to be used in the home for internet access. The proportion of Danes accessing the internet in their homes via a portable computer increased to 63 per cent in 2009. At the same time, the proportion of those, who access the internet via desktop computer decreased to 58 per cent.

In total, 86 per cent of Danes had access to internet from their home in 2009. 92 per cent of those with internet access in the home or 79 per cent of Danish citizens had access to broadband.

14 per cent of individuals in Denmark did not have access to Internet from their home in 2009. 7 per cent had access to internet but not to broadband.

Transport

1

Infrastructure

Extension of motorways and dual-carriageways

There are 73,331 km of public roads in Denmark on 1 January 2009. After the restructuring of the administrative regions as from 2007 the new municipalities have taken over the responsibilities for the earlier locally oriented county roads, while the state has taken over the administration of the other primary roads of the former counties.

The state road network now comprises 5 per cent of the public road network. The other 95 per cent are administered by the new municipalities.

The majority of the public road network (64 per cent) is in Jutland, while the rest is distributed between the Region Hovedstaden (9 per cent) and the residual part of the islands (27 per cent).

The public road network has increased by more than 1,800 km over the past ten years, mainly because of more municipal roads. Simultaneously the principal road network has been enlarged.

Since 1999, the motorway network has been extended by 25 per cent to 1,128 km in 2009, and the length of the dual-carriageways has increased by 17 per cent to 379 km in 2009.

Figure 1

Distribution of road network and of road traffic

www.statbank.dk/vej11 and vej20

Almost a quarter of the rail network is electrified

The length of the total rail network was 2,667 km on 1 January 2009, the same as the previous year. Viewed in relation to the total area of Denmark, there is 62 km of railway per 1,000 km². The greatest part of the rail network is operated by the state-owned Rail Net Denmark.

The regional railways are responsible for operating 514 km of rail network and Copenhagen Metro for 21 km. Since 1990, the rail network has decreased by nearly 200 km, mainly because of closures of sections of the goods railways of Rail Net Denmark.

Compared to Sweden and Norway, the railway density for the Danish state-owned rail network is two and four times greater, respectively, but compared to most other European countries, the density of the Danish rail network is slightly smaller.

At the beginning of 2009, almost a quarter of the rail network was electrified. This is three times more than in 1990.

Goods transport by ship is concentrated at 26 sea ports

In 2008, there were 115 Danish ports handling freight. The 26 major sea ports each handled more than 1 million tonnes of goods annually, and accounted for almost nine tenths of the total goods transport by sea.

In terms of throughput of goods, the sea ports of Fredericia and Århus are the greatest Danish sea ports handling, respectively, 14 per cent and 11 per cent of total throughput of goods in sea.

Ferry and passenger ship traffic is concentrated at 40 sea ports

74 sea ports are engaged in transport of passengers, of which half of them have more than 200,000 arriving and departing passengers every year and account for more than 90 per cent of passengers in Danish sea ports.

The greatest Danish ferry port is Helsingør accounting for 24 per cent of all sea passengers, followed by Rødby Færgehavn with 15 per cent of all passengers in 2008.

2

Means of transport

Three out of four motor vehicles are passenger cars

On 1 January 2010, there were a total of 2,849,000 motor vehicles in Denmark. 74 per cent of motor vehicles were passenger cars, 16 per cent were delivery vans, 7 per cent were motorbikes and 45-mopeds, and the rest were buses and lorries.

The increase of 227,000 or 9 per cent in the stock of motor vehicles from 2006 to 2010 was mainly dominated by passenger cars and delivery vans. Furthermore, there has been a sharp increase in the number of motorbikes.

The number of busses and lorries has remained unchanged over the period. The number of vans has decreased by 20.000 in the past year.

More cars available

In 2009, there were 383 passenger cars per 1,000 inhabitants. The largest stock of passenger cars is in Nordsjælland with 425 passenger cars per 1,000 inhabitants, while Copenhagen City score lowest with 244 passenger cars per 1,000 inhabitants.

Figure 2
Stock of passenger cars

www.statbank.dk/bil10

Figure 3 Stock of passenger cars per 1,000 inhabitants by province. 1 January 2010

www.statbank.dk/folk1 and bil707

Minor decrease in the number of new private cars registered

The number of new private cars registered in 2009 was 27 percent less than the period 2005-2008 in average where the car sales were very high. However, the part registered by industries has been stabile on 36-38 percentages the latest eight to nine years.

Figure 4 New private cars registered by industries and by private households

www.statbank.dk/bil5

Increase in energy efficiency

The energy efficiency for petrol- and diesel-powered passenger cars registered in 2008-2009 was on average 18.5 km/l compared to 13.1 km/l for cars registered in 1997-1998. This is equivalent to an increase of 42.1 per cent. For cars purchased by private households, the corresponding figures are 19.0 km/l and 13.4 km/l, while for cars purchased by the industries figures are 17.8 km/l and 12.4 km/l.

Figure 5 Energy efficiency for new private cars registered

www.statbank.dk/ee1

Fewer locomotives, more train sets and a considerable reduction of the number of goods wagons

While there are a falling number of locomotives, the number of train sets has increased. At the beginning of 2009, the number of train sets was 548, corresponding to 19 per cent more than in 1999, while the number of section locomotives has been reduced by 40 per cent.

There were 125,000 seats in trains which is 22 per cent more than ten years ago. One third of the seats are in S-trains.

Foreign goods wagons now handle most of the transportation of goods by train as most of the rail transport is in transit traffic. At the beginning of 2008, the Danish railway companies owned only 153 goods wagons, compared to 3,100 ten years ago.

Container ships now account for almost six tenths of the gross tonnage of Danish cargo vessels

On 1 January 2010, there were 1,773 Danish ships of at least 20 gross tonnage (GT), which is 2 per cent more than the previous year. 36 per cent of the ships were fishing vessels and 30 per cent were cargo vessels.

The total gross tonnage was 11.1 million. This is an increase of 0.8 million compared to the previous year, and the highest ever. Especially, tankers have seen an increase.

At the beginning of 2010 the gross tonnage of container ships was 6.0 million. This corresponds to 59 per cent of the gross tonnage of all Danish cargo vessels and more than twice the figure of 2000.

Figure 6 Danish ships by type of use. 1 January 2010

www.statbank.dk/skib11

Young ships represent the greatest part of the total gross tonnage

At the beginning of 2010, 76 per cent of the total gross tonnage was represented by ships younger than 10 years. 14 per cent of the gross tonnage was between 10 and 14 years old. For tankers, 92 per cent of the GT was represented by ships less than 10 years old, and less than 0.3 per cent of the GT by ships more than 25 years old.

Danish flagged merchant navy is the 17th largest in the world

The Danish merchant navy is made up by cargo and passenger ships of at least 100 GT. At the beginning of 2010, the number of ships was 462, representing 10.7 million GT. In July 2009 the Danish flagged merchant navy accounted for 1 per cent of the total world GT, and was the 7th largest in the EU and the 17th largest in the world.

3

Traffic

Increase in traffic by motor road vehicles and fall in bicycle traffic

Danish vehicles drove more than 49 billion kilometres on Danish roads in 2008, including traffic by bicycles/mopeds, and about 2.5 billion km abroad. Assuming that the traffic of Danish road vehicles abroad corresponds to the traffic of foreign vehicles in Denmark, the total traffic of Danish and foreign vehicles in Denmark is estimated to 52 billion km, of which motor road vehicles accounted for nearly 50 billion km.

Since 1990, traffic by bicycles has largely been decreasing. However, 2008 showed an increase. On the other hand traffic by motor vehicles has had an average annual increase of 1.7 per cent, which corresponds almost to the growth in the number of motor vehicles. Passenger cars accounted for three fourth of the total traffic performance.

Increase in traffic by cars and trains across the Great Belt

Between 70,000 and 105,000 cars drive every day on the most trafficked roads into Copenhagen, while the less trafficked motorways on Lolland and north of Limfjorden carried less than 10,000 cars every day.

In 2008, more than 30,000 cars crossed the Great Belt every day; this is an increase of 64 per cent compared to the first year when the bridge was opened, while the

ferries between east and west Denmark carried 2,400 cars every day, compared to 12,700 in the year before the bridge was opened for road traffic.

Train traffic between east and west Denmark has also increased considerably after the opening of the bridge across the Great Belt.

Nine sections of railway lines carry over 200 trains every day

In 2008, nine sections of railway lines carried over 200 trains every day, of which seven of the sections were located in the Copenhagen region. The most trafficked section is København H – Østerport with 445 trains every day from Monday to Friday, while the section Nykøbing Falster-Gedser is still the least trafficked with only two trains every day.

For almost all other sections, there were more than 20 trains every day. 124 passenger trains and 50 goods trains crossed the Great Belt every working day.

4

Passenger transport

Every Dane travels 40 km a day

On average, every Dane covered a distance of almost 15,000 km in 2008, corresponding to 40 kilometres a day. In recent years, there has primarily been a considerable increase in transport by passenger cars, including vans, but also in transport by train. Possible explanations are the increase in the number of cars, the extension of especially the motorways and increased distances between the home and work/education.

Figure 7 Passenger transport performance

www.statbank.dk/pkm1

Most passenger km's are accounted for by car

The majority of passenger transport performance is by car (77 per cent), 9 per cent by bus and 8 per cent by train. Transport by bicycles/mopeds has markedly fallen in recent years, but increased in 2008 where every person on average cycled 420 km.

Increase in national transport by train and in journeys across the Sound

The recent years, there has been a considerable increase in national transport by train. In 2008, there was on average 182,000 train journeys every day, of which 104,000 east of the Great Belt, 55,000 west of the Great Belt and 23,000 across the Great Belt. In addition, there were more than 28,000 train journeys across the Sound, 13 per cent more than in the previous year.

Decline in domestic air traffic after the opening of the Great Belt Link

The number of passengers in domestic flights has fallen since the opening of the Great Belt Link. From 1996 to 2003, the number of domestic passengers has almost been halved. However, since 2004 there has been an increase in the number of domestic passengers until 2008 where the general economic crisis led to a smaller decline.

Increase in the number of passengers on international flights

The number of departing passengers on international flights has increased, except for a temporary slowdown in 2003 caused by the war in Iraq etc. The economic crises also here led to a slowing down in 2008. Three out of four departing flight passengers from Danish airports now travel on international flights.

5

Goods transport

National transport of goods is mainly by lorries – international transport of goods is predominantly by ships

In the national transport of goods, i.e. the places of loading and unloading are both situated in Denmark, 196 million tonnes of goods were carried in 2008. Lorries are by far the most commonly used means of transport accounting for 93 per cent of all goods transport. 7 per cent were carried by cargo vessels and less than 1 per cent by trains.

However, in the international transport of goods, i.e. transport between Denmark and abroad, ships are the most dominant means of transport. In 2008, international goods transport accounted for 90 million tonnes of goods, of which 62 per cent were carried by cargo vessels, 14 per cent by Danish lorries and 21 per cent by foreign lorries. The rest was carried mainly by trains.

Figure 8 Volume of goods in national and international traffic. 2008

www.statbank.dk/uvlg1, nvg1, ivg41, bane1, bane401, skib41 and flyv41

Increase in the share of national road goods transport carried out by haulage contractors

During the past ten years, the total transport performance by road vehicles has remained above 11 billion tonne-km. In 2008, however, the transport performance decreased to 10.7 billion tonne-km as a consequence of the general recession. The decline has notably taken place within road haulage for hire or reward, but haulage contractors still account for most of the transport performance.

The share of the transport performance by haulage contractors has increased at the expense of the businesses' own transport of goods from 73 per cent in 1990 to 82 per cent in 2008 due to more businesses' outsourcing service activities, including transport services.

Increase in volume of goods transported in connection with construction works

In 2008, more 41 per cent of the volume of goods was construction materials, stone, gravel, sand, cement and soil, but as transport in connection with construction work typically covers short distances, this type of transport only accounted for 26 per cent of the total transport performance.

Agricultural products, forestry products and fishery products and general cargo also represented 13 per cent of the volume goods transported and 15 per cent of the transport performance.

Food products, animal fodder and other manufactured products apart from oil and chemical products accounted for 32 per cent of the volume of goods transported and 46 per cent of the transport performance. 6 per cent of the goods were classified as hazardous goods, notable as flammable liquefied goods like gasoline.

Figure 9

National goods transport performance by commodity groups. 2008

www.statbank.dk/nvg23

Figure 10
International transport
by Danish lorries

www.statbank.dk/ivg4 and ivg41

Goods by lorries are mainly transported local

A majority of all goods is transported locally within the same sub-region, and the majority of the goods transported between sub-regions are carried to a neighbouring sub-region.

At regional level four fifths of the volume of goods was moved within the same region. In 2008, the length of a journey was on average 77 km against 83 km in the previous year.

International goods transport by Danish lorries is carried out by haulage contractors

International transport of goods by Danish lorries is predominantly carried out by road haulage contractors. Since the beginning of the 1990s, international road transport of goods carried out by Danish lorries has fluctuated between 10 and 13 billion tonne-km.

With the extension of EU in the middle of 2004 a downward trend began. From 2004 to 2008 the transport performance went down by 30 per cent to 8.8 billion tonne-km.

In the same period, however, total road transport between Denmark and abroad increased by 3 per cent thus further underlining the reduced market share of Danish haulage contractors.

The market share of Danish lorries reduced to 38 per cent

Foreign lorries accounted for 62 per cent of all goods carried by lorries between Denmark and abroad in 2008, compared to 60 per cent of the transport performance in 2007 and 36 per cent in 2000.

Among the foreign lorries there was a majority of German and Polish vehicles. The development is, among other things, due to Danish business' moving to other countries plus the expanded common market in EU.

Germany and Sweden are the greatest consignees and consignors of goods

Goods transport between Denmark and abroad mainly have Germany and Sweden as partner countries. The average journey involving transport of goods was 579 km in 2008. Half of the loaded journeys were shorter than 500 km while just one sixth exceeded 1,000 km.

Figure 11
Throughput of
containers in the five
largest sea ports

Note: TEU, container unit of 20 feet
www.statbank.dk/skib49

Majority of goods carried by sea is in international traffic

Despite a decline in the volume of goods loaded and unloaded, Danish sea ports handled 91 million tonnes of goods in 2008, and this is among the highest levels in the past ten years.

The volume of goods in maritime transport via Danish sea ports fluctuates with the import of coal and the redistribution of coal from the coal depots.

The greater part of the throughput of goods in Danish sea ports is goods carried by sea to and from foreign countries. Just a fifth of the goods could be attributed to domestic transport between Danish sea ports or between the sea and Danish ports.

Transport by sea is mainly concentrated at the largest sea ports, as half of the goods carried can be attributed to the six largest sea ports. Almost two thirds of the goods are either solid bulk, especially coal, stone, sand, gravel, chalk, cement, foodstuffs, or liquid bulk such as crude oil and mineral oil products. A fourth is ferry goods, especially goods transported by road vehicles.

Steady growth in goods carried by containers

Containerized goods in maritime transport have doubled since 1998. In 2008, Danish sea ports handled 451,000 containers, corresponding to 747,000 20-foot units (TEU), notably at the sea port of Århus which handled more than 60 per cent of all seaborne containers.

Figure 12 Transport performance of goods transported by rail

www.statbank.dk/bane1

Increase in goods transport by trains in transit through Denmark

During the latest ten years, goods transports by rail has accounted for about 2 billion tonne-km. However, there are major disparities within the different types of rail transport. National and international goods transport has steadily fallen, whereas goods transport in transit through Denmark has risen markedly, and now amounts for almost three fourths of all rail transport in Denmark.

Decline in transport of oil and natural gas via pipelines

If transport of oil and gas via pipelines in connection with domestic transport is included, transport via pipelines covers 29 per cent of total domestic transport.

Transport via pipelines has grown considerably up to 2005, but has been declining since. In 2008, the pipeline transport performance was 6.6 billion tonne-km, 2 per cent less than in the previous year. More than third of the transport was accounted for by natural gas and the rest by oil from the North Sea.

Figure 13 Goods transport via pipelines

6

Road traffic accidents

Fall in the number of persons killed in road traffic accidents

From 1998 to 2008, the number of traffic accidents leading to personal injury has decreased by 34 per cent. In 1998, the number of traffic accidents leading to personal injury was 7,556, and this had fallen to 5,020 in 2008.

In the same period, the number of people killed in traffic accidents fell from 499 to 406, corresponding to a fall of 19 per cent. The number of serious and minor injuries has fallen by 35 per cent.

Figure 14 Persons killed in road traffic accidents

www.statbank.dk/uheld1 and uheld8

From 2007 to 2008, the number of road traffic accidents fell by 10 per cent, while the number of persons killed was unchanged. In 2008, alcohol accidents accounted for 16 per cent of all traffic accidents and for 23 per cent of all people killed in traffic accidents.

Figure 15 Persons injured in traffic accidents

www.statbank.dk/uheld1 and uheld8

Significant underreported figures in the statistics on road traffic accidents

It is generally known that the official statistics on road traffic accidents based on data reported by the police only cover a limited proportion of the total number of personal injuries in traffic.

Surveys conducted by Statistics Denmark have shown that the total number of personal injuries in traffic is seven times higher than the number registered by the police. What are known as underreported figures – i.e. traffic accidents not recorded by the police – especially appear among one-man accidents, cyclists, children and young people. For these groups, only about 10 per cent of the personal injuries are recorded by the police.

Environment and energy

1

Agriculture

Figure 1
Nitrogen in manure
and commercial
fertilizers

www.statbank.dk/kvael2 and
kvael3

Declining use of fertilizers in agriculture

Agricultural production of animal and vegetable products involves the use of manure and commercial fertilizers. This causes large quantities of nitrogen and small quantities of phosphorus to be discharged into the soil. Some nitrogen and phosphorus are not received by plants and as a consequence is leached from the soil, leading to a discharge of these substances into the ocean via water run-offs.

The adverse effects include undesirable algae growth, resulting in an undesirable environmental state. As a result of restrictions in the total supply of nitrogen plus a better utilization of manure, the use of commercial fertilizer has been declining.

Action Plan for the Aquatic Environment II and III

The aim of the Action Plan for the Aquatic Environment II was to reduce emissions of nitrogen from agriculture. In order to minimize nitrogen leaching, it is intended to increase areas of wetlands, organic agriculture and agriculture and re-sowing of crops and to tighten up the requirements of harmonization, i.e. to ensure a better balance between the quantity of animal manure produced and the related area suited for manure at each individual farm. The reduction of emissions of phosphorus is included as the main theme in the Action Plan for the Aquatic Environment III.

Figure 2 Total area extent of organic farms

www.statbank.dk/oeko1

More organic farmland

The proportion of organic farmland has increased significantly since 1996. In recent years, the growth in organic farmland has been both decreasing and increasing and accounted for 136,000 hectares in 2008, corresponding to 5 per cent of all Danish farmland.

Combat of weeds, pests, and fungi is harmful for the environment

Pesticides are chemical products mainly used within agriculture to combat weeds, fungi, and insects. Effective control of pests, weeds, and fungi in fields has had an indirect effect on the number of animals that feed on insects.

The effect might be fatal or entail a reduction in the reproductive abilities of the relevant animals. Pesticides are divided into products that protect crops against weeds (herbicides), against fungus infection (fungicides), and against insects (insecticides).

There are also products that shorten crops (growth regulators). For a number of years, the use of pesticides has been declining, but since 2000 an increase can be seen.

Figure 3 Pesticide sales to agriculture

2

Greenhouse Gas Emissions

Greenhouse gases

89 per cent of the global warming potential from Danish greenhouse gases came from CO₂ in 2007. Methane accounted for 4 per cent, while nitrous oxide contributed 6 per cent. The emissions of halocarbons constituted less than 1 per cent of the total Danish global warming potential. By converting the emissions into CO₂-equivalents account have been taken for the fact that the effects of the substances on the atmosphere, and, thus, their global warming potentials, are different.

Figure 4 Greenhouse Gas Emissions from Danish Economic Activities

Note: The halocarbons (at the top of the figure) constitute less than 1 million tonnes CO₂-equivalents and are hardly visible.

www.statbank.dk/term2

Greenhouse Gas Emissions from Industries and Households

When CO₂, methane and nitrous oxide emissions are taken as a whole and assessed in relation to their global warming potential, between 1990 and 2007, the industries have contributed 90 per cent of all Danish man-made emissions, with households making up the remaining 10 per cent.

Agriculture, fishing and quarrying contributed 12 per cent of the global warming potential. It is largely due to emissions of methane and nitrous oxide from agriculture, while emissions of CO₂ played a minor role.

Figure 5 Greenhouse Gas Emissions from Industries and Households. 2007*

Note: Emissions are calculated as CO₂-equivalents (GWP).

In 2007, *Electricity, gas and water supply* contributed almost 23 per cent of the global warming potential from greenhouse gases. This includes all Danish production of electricity and district heating.

All emissions in connection with production of electricity and district heating come from this industry, while the use of electricity and district heating in the industries and households cause no direct emissions.

Transport, post and telecommunication caused 43 per cent of the global warming potential from CO₂, methane and nitrous oxide. Included are all emissions from businesses that carry out transport as a service to other businesses and households.

On the other hand, it does not include transport activities carried out by businesses and households on their own behalf, using their own cars and lorries, etc.

Greenhouse Gas Emissions from transport

Greenhouse Gas Emissions from transport activities in industries and the households made up 56 per cent of the total greenhouse gas emissions. Emissions from Danish operated ships abroad contributed 42 per cent of total emissions and 74 per cent of emissions from all transport activities.

Emissions from the households' use of cars contributed 40 per cent of greenhouse gas emissions when that part of the emissions related to Danish operated ships and planes bunkering of fuel abroad is excluded.

3

Public sector response

Environmental taxes

Denmark's environmental policy involves an increasing use of environmental taxes or more precise environmentally related taxes. Environmental taxes comprise of pollution, energy, resource, and transport related taxes.

In 2008, the total revenue generated from these taxes was DKK 99.4 billion, corresponding to around 11 per cent of total revenues from taxes and duties. Energy related taxes accounted for the greatest share.

Total revenue generated from energy related taxes amounted to DKK 36.8 billion in 2008, corresponding to 37.0 per cent of total revenue from environmental related taxes.

In 2008, transport related taxes accounted for 32.4 per cent of environmental related taxes while resource related taxes accounted for 27.2 per cent and pollution related taxes accounted for 3.4 per cent.

Figure 6 Environmental taxes

Compared to Statistical Yearbook 2009 the relationship between "pollution taxes" and "resource taxes" has changed. The change is caused by the hydrocarbon tax and corporation tax on hydrocarbon manufacturing as these taxes are now classified as resource taxes instead of pollution taxes. The change has been implemented back in time.

www.statbank.dk/mreg2s

4

Energy consumption**Denmark self-sufficient as regards energy**

Since 1997, Denmark has been energy self-sufficient thanks to the extraction of crude oil and natural gas from the North Sea and the production of renewable energy. The total production has increased until 2005.

In 2006 there was a significant decrease in the production of energy, primarily due to a decrease in the production of oil and natural gases. The decrease has continued into 2007 and 2008, but still the production of energy remains significantly higher than the total consumption of energy in Denmark.

Changed composition of the energy consumption

Gross energy consumption is made up as the consumption of oil, natural gas, coal and renewable energy, etc. When calculating gross energy consumption, adjustments are made to take into account imports and exports of electricity. Total gross energy consumption fell by 1.6 per cent between 2007 and 2008.

Since 1990, the composition of fuel use has changed significantly as there has been an increase in the consumption of natural gas and renewable energy and a decrease particularly in the coal consumption.

More renewable energy sources

The consumption of renewable energy has increased over a number of years and now accounts for 18 per cent of total gross energy consumption.

Renewable energy plays a particularly important part with regard to environmental issues like emissions of greenhouse gases and global warming, as an increase in the use of such energy causes a reduction in greenhouse gas emissions by replacing the use of fossil fuels, e.g. coal and oil.

Renewable energy sources include the greenhouse gas emission free types of energy, e.g. wind power and solar power as well as carbon-dioxide neutral fuels, e.g. hay and wood, which absorb carbon dioxide from the atmosphere during growth, only to release it again when they are incinerated.

Figure 7 Gross energy consumption

Table 324 Extraction of raw materials

External trade

1

Denmark's external trade in goods

External trade surplus for 23 years in a row

After the Second World War, Denmark's foreign trade can be characterised by two distinct periods. In the early period, Denmark had a permanent deficit on the annual balance of trade.

The recent period has been an era of constant surplus, starting with the year 1987. The balance of trade is the difference between exports and imports of goods.

Figure 1 Balance of trade

Between 1949 and 1986, the annual deficit on the balance of trade averaged 4.4 per cent of gross domestic product (GDP). The average surplus in the recent period (including 2009) is 3.0 per cent of GDP.

From the early 1950s, imports and exports each accounted for roughly one-fourth of GDP. In recent years this share has risen to nearly one-third.

Among the factors affecting developments in the post-war period was the increase in raw material prices resulting from the Korean War in the early 1950s. This implied that imports and exports rose sharply as a percentage of GDP. The two oil crises in the 1970s also resulted in soaring import prices.

Exports as a percentage of GDP rose steeply from the late 1970s until the mid-1980s. Since 1987, exports have had a larger share of GDP than imports – a development that has made a positive contribution to GDP growth.

Figure 2 Imports and exports

2

Denmark's trading partners**Geography is a major factor**

Denmark's largest trading partners are geographically close to Denmark. In 2009, the other 26 EU countries accounted for 65 per cent of the total Danish external trade and Norway another 6 per cent.

Countries of export and import

Danish external trade is concentrated on a few dominant trading partners. The 10 largest export markets accounted for 64 per cent of total Danish exports in 2009, while 10 countries supplied 72 per cent of total imports into Denmark.

Germany is Denmark's largest trading partner, but in recent years exports to Germany have been declining relatively. In 2009, Germany accounted for 21 per cent of Denmark's imports and 16 per cent of Denmark's exports. 10 years earlier (1999) the corresponding figures were 21 per cent and 18 per cent.

In recent years, China has been the fastest climber on the list of major trading partners. In 2009, China was the fourth largest supplier of goods to Denmark, accounting for 6 per cent of all Danish imports.

Trade is not so brisk in the opposite direction. Roughly 2 per cent of Danish exports go to China, a fact which puts China in the 12th place among Denmark's export markets.

Figure 3 Top 10 export and import countries

www.statbank.dk/sitc5r3y and sitc5r4y

3

External trade analysed by commodity categories

Finished goods account for half of total imports

Since 1960, finished goods have made up an ever larger share of Danish imports, now accounting for half of total imports. During the same period, imports of semi-manufactured products have declined from one-half to one-third of total imports.

Figure 4 Imports analysed by commodity categories

Denmark is a net exporter of oil

Until the first oil crisis in 1973, imports of crude oil and oil-based products were stable at around 10 per cent of total imports. Then an increase in oil prices pushed the value ratio up to around 20 per cent until the mid-1980s.

Subsequently, the value of imports of crude oil and oil-based products has fallen, so that these goods now account for about 6 per cent of total imports. Oil exports,

on the other hand, increased sharply from 1997 to 2004, after which they have dropped substantially.

In 2009, exports of crude oil and oil-based products accounted for just under 7 per cent of total exports. Still, in volume terms, oil exports are two and a half times as large as oil imports. These developments reflect the scale of energy production in the North Sea, which has made Denmark a net exporter of oil since 1997.

Figure 5 Exports and imports of oil

Semi-manufactured and finished goods dominate exports

Since the beginning of the 1960s, the relative importance of agricultural exports has declined. Sales of agricultural products now account for only 17 per cent of total exports.

Figure 6 Exports analysed by commodity categories

Conversely, over the same period, finished goods have doubled to 40 per cent of total exports, and semi-manufactures have risen from around 20 per cent in 1960 to 30 per cent of total exports of goods most recently.

4

Quantities, unit values and the terms of trade

Import and export quantities on the rise

In terms of volume, both Danish imports and exports have increased quite steeply until 2007 – the only exception being a slight decline in 2003. In 2008, both imports and exports, in terms of volume, experienced a slight decline, while 2009 was affected by a strong decline of historical dimensions. Based on the quantity index there was a decrease in imports on 18 per cent in 2009 compared with 11 per cent for exports.

Figure 7 Quantity index of imports and exports

www.statbank.dk/konj42 and bec42

Similar fluctuations in prices for imports and exports

Since 1995 prices of imported and exported goods have shown an almost parallel development – a development illustrated by the unit value index. Until 2008 prices of import as well as exports followed the same increase, where after they both decreased steeply in 2009.

These similar fluctuations in prices for imports and exports cause Denmark's terms of trade (i.e., the ratio of the export unit value index to the import unit value index) to remain fairly constant.

An increase in Denmark's terms of trade means that either prices for exports increase more than prices for imports or prices for imports decrease more than prices for exports.

Danish economy 1999 to 2009

Economic downturn continues in 2009

The economic growth was significantly negative in 2009, which was the second year in a row with negative growth. After three years with high growth rates in 2004-2006 a more subdued growth rate in 2007 and negative growth in 2008 the Danish Economy experienced a historic negative growth of -4,9 per cent in 2009.

In comparison the real growth in GDP averaged 2.4 per cent from 2003 to 2007 which is the latest period with an economic upturn, while the growth rate from 2007 to 2009 was -2.9 per cent annually on average.

Decrease in employment

Four years of increasing employment was followed in 2009 by a drop in employment of 107,000 persons (3.6 per cent) so that the average number of persons employed was approximately 2,842,000. Of these, 41,000 persons were on leave in 2008.

Changes in employment are often seen with some delay in relation to the economic growth. This was seen clearly with the slowdown of economic growth in 2001 and again in 2004, when the economic conditions changed. In the period 1997-2002, employment rose by 102,000 persons.

During 2003 and 2004, the total fall in employment was 47,700 persons. From 2004 to 2008 the employment increased by 210,700 persons.

Figure 1
Real growth in GDP

www.statbank.dk/nat02

Figure 2
Annual growth in employment

Note: Including leave.

www.statbank.dk/nat18

The share of the workforce employed in goods-producing industries (agriculture, etc., manufacturing, energy, and construction) has been continuously declining for several years. In 1999, 26.8 per cent were employed in the goods-producing industries, while in 2009 the proportion was 22.1 per cent. During the same period, employment increased, in particular in the private service industries (from 37.9

per cent in 1998 to 42.0 per cent in 2009). The percentage of persons employed in public and personal services was 35.3 per cent in 1999 and 35.9 per cent in 2009.

2

Domestic demand and foreign trade

Domestic demand has been the driving force in the economic development

In 2009, the domestic demand contributed negatively to the significantly negative growth in GDP. In the previous 10 years, the domestic demand was an important driving force behind the economic growth.

In this period, except for 1999, the domestic demand has contributed positively to the growth in GDP, while the net exports on several occasions have contributed negatively to the growth in GDP.

Among other things, this is due to changes in the economic growth abroad that affects the Danish exports. At the same time, increasing domestic demand is known to give rise to increased import of, e.g. consumer goods.

Figure 3 Contribution to real annual growth in GDP

Decreasing foreign trade in 2009

From 1998 to 2008, Denmark's foreign trade has seen a relatively large increase, both when measured as a percentage of GDP and in current prices. In 2009 however the foreign trade declined considerably.

Particularly, trade in services has increased steeply when calculated in current prices. The import of services almost tripled from 1998 to 2008, and the export of services increased almost at the same rate.

In the same period, the import of goods was doubled, and the export of goods increased approximately 80 per cent.

Figure 4 Imports and exports as percentage of GDP, current prices

www.statbank.dk/nat01

Among other things, the increase in trade in services is due to a higher growth of prices, compared to trade in goods. Mergers and acquisitions in the sea transport industries are other factors that have had an impact on trade in services.

Figure 5 Final uses as a percentage of GDP, current prices

www.statbank.dk/nat01

Increase in capital stocks

The share of the national wealth that is held in the form of fixed assets (net capital stock) grew in 2009 by 1.2 per cent and increased by 14.0 per cent from 1999 to 2009. The net capital stock has been continuously increasing over the period 1999-2009. The change in the capital stock (net capital stock) at current prices between two dates of compilation reflects net investment (the gross fixed capital formation less consumption of fixed capital), and the nominal valuations during the period.

Figure 6 Net capital stock

www.statbank.dk/nat08

Decreasing productivity

Based on the figures from the Danish working time account, it is possible to calculate the productivity per hour as the market gross value added per working hour.

The productivity dropped 0.2 per cent in 2009. In 2007 and 2008 it dropped 0.8 per cent and 3.0 per cent respectively. The productivity increased by an annual average of 1.4 per cent from 1998 to 2006. This results in an average annual growth rate of 0.6 per cent from 1999 to 2009, compared to an average growth of 0.4 per cent if the estimate is based on employed persons.

Figure 7 Gross value added at 2000 prices (chained) per hour. Annual growth rate

www.statbank.dk/nat02 and [nat18](http://www.statbank.dk/nat18)

Increasing wage share in 2009

Total income from production comprises compensation of employees and enterprises' profits (gross operating surplus and mixed income). There was a general

increase in the share of wages and salaries of total incomes during the period up to 2000, but in 2000, there was a strong decline.

From 2001 to 2003, the wage share rose again followed by a moderate decline in the period from 2004-2006. The last three years the wage share has increased and reached a peak level of 68.6 per cent in 2009.

The figure below shows changes in compensation of employees as a proportion of GDP at factor prices.

Figure 8 The wage share

3

Balance of payments

Figure 9 Balance of current accounts

Table 372

Savings, the balance of payments and debt

The share of savings of the whole economy (i.e. savings as a percentage of gross national disposable income) increased from 21.3 per cent in 1998 to 24.3 per cent in 2001.

After 2001 the share of savings has been stable reaching its highest level in 2005 and 2006 where it was more than 25 per cent. In 2009 the share of savings went down to the level from 1998 at 21.5 per cent.

Since 1999, net lending has been positive. Net lending decreased in 2006 and 2007 but has been growing since. In 2009 the net lending was DKK 66.7 billion.

Denmark has positive net assets again

Danish net lending is contributing to a reduction of Denmark's foreign debt. In 2005, Denmark had positive net assets for the first time since the 1950s.

Net assets decreased between 2005 and 2008, despite a large surplus on the balance of payments. This is because the debt balance is also influenced by exchange rate fluctuations. In 2009, the net assets again was positive at 100 billion.

4

Financial claims

Fall in financial net equity of households

After a period from 1998 to 2006 where the financial net equity of households almost doubled, the financial net equity of financial households fell in 2007 and especially in 2008. In all years during this period households had a negative net lending.

Consequently, the explanation must be found in the development of *other changes in status, net*, where developments in the financial markets in 2007 and 2008 lead to large negative revaluations. Especially adjustments of share prices have affected the households' net equity both directly and indirectly through their pension scheme savings in life insurance companies and pensions funds.

In addition to the household sector, the national accounts include financial accounts for another three main sectors: corporate sector (non-financial and financial corporations), general government sector and the rest of the world. The financial claims consist of a number of financial assets and liabilities comprising, e.g., shares, bonds and loans. The difference between the total financial assets and the total financial liabilities constitute the financial net worth.

Figure 10 Development in the net equity of households

5

Inflation

Low inflation in 2009

After the inflation (measured as the annual increase in the GDP deflator) in Denmark reached 3.6 per cent in 2008 which was the highest level since 1989 the inflation in 2009 was just 0.4 per cent. The average increase in annual prices in the period from 1989 to 2007 was 2.0 per cent.

Between 1989 and 2007 the inflation has been both low and stable compared to the past, only in 2000 and 2005 did the inflation reach 3 per cent.

Figure 11 Inflation measured as the annual increase in the GDP deflator

6

International comparisons**Declining international economy in 2009**

Among the countries with the greatest significance for Danish economic development, the United States and the United Kingdom in particular have had an economic downturn in 2008. Growth in Germany has been robust in 2008 compared to the rest of the EU while in Japan and Sweden there has been an actual reduction in economic activity in 2008 like Denmark. Since 1995, Denmark has experienced economic growth slightly below the EU average.

Figure 12**GDP in selected countries, constant prices**

Source: Eurostat, New Cronos.

In 2009 the economic decline became global with a massive economic decline in every country that has significant importance for the economic development in Denmark.

Public finance

1

Public sector

Composition of the public sector

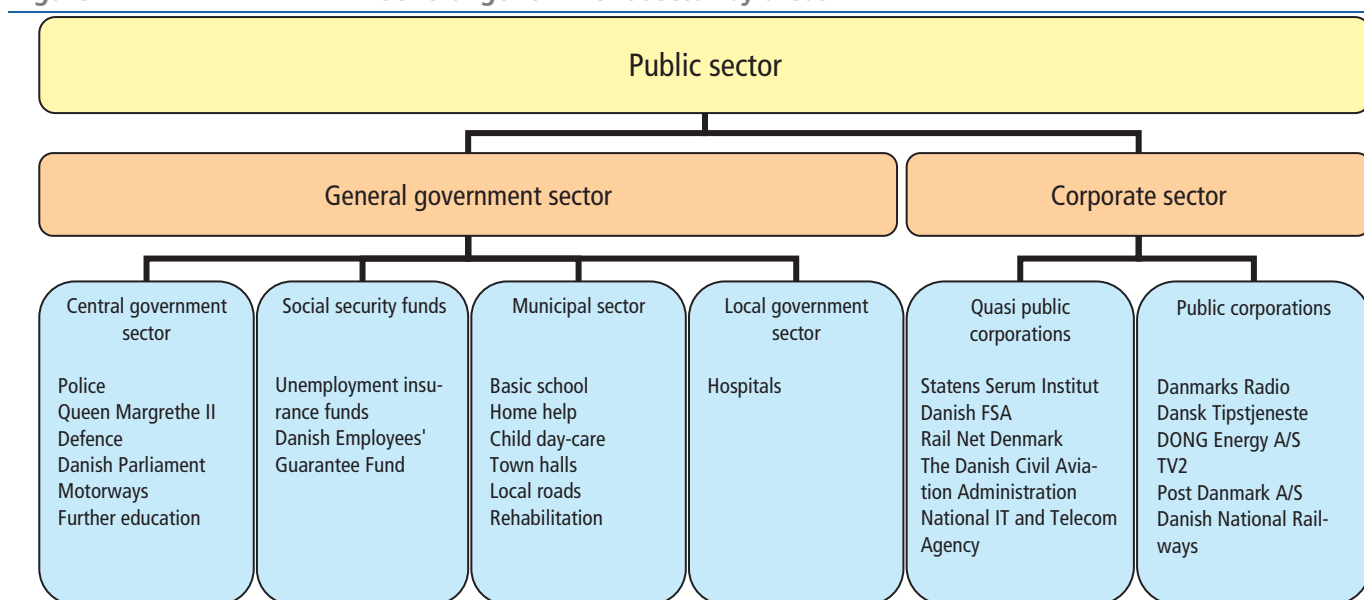

The public sector comprises the general government sector and public enterprises and quasi public corporations (corporate sector).

The general government sector produces non-market services that are primarily funded through taxes. These services are wholly or partially available to private households and enterprises (e.g. day-care institutions, education and hospitals).

The corporate sector is composed of institutions that are run commercially. The difference between public enterprises and quasi public corporations is that they are part of the public system of accounting whose accounts are integrated into state or regional accounts (e.g. municipal utility enterprises), while public corporations are organised as a company or similar according to civil law and are owned or controlled by public authorities (e.g. DONG Energy A/S and the Danish National Railways). This implies that the quasi corporations are 100 per cent controlled by the general government sector, while the public enterprises are controlled to a lesser extent.

In the following, a number of designations are used in describing the public area. It will be explicitly stated if the description also comprises the public corporate sector. Otherwise, figures only relate to the general government sector.

Figure 1 General government sector by areas

The structural reform of Danish municipalities 2007

The structural reform of Danish municipalities came into force on 1 January 2007 and gave rise to major changes in the public sector. The reform consists of three

main elements: A new municipal map of Denmark, a new distribution of tasks and a reform of financing and monetary equalization.

The changes in the municipal structure implied that the number of municipalities was reduced from 271 to 98. In addition to this, the counties were abolished and 5 regions were established.

There was at the same time a change in the distribution of tasks between the central government, region and local government. For example, the responsibility of most tasks related to nature and the environment was transferred from the counties to the municipalities, while the general government sector became responsible for, among other tasks, further education, which was transferred from the counties.

Similarly, the redistribution of tasks among the sectors has resulted in an adjustment of the municipal system of monetary equalization reflecting the distribution of the new tasks. Hospitals are to be co-funded by the municipalities.

2

Developments in the public sector

The size of the public sector has remained constant since 1995

Since 1995, compared with the total Danish economy, the size of the public sector has remained constant between 27 and 30 per cent of gross domestic product at factor cost, GDP.

Figure 2 GDP at factor cost for the public sector as a percentage of GDP at total factor cost for the total Danish economy

www.statbank.dk/nat01 and off14

Compensation of employees in the public sector accounts for about 1/3 of total wages and salaries paid to employees in the Danish economy, while investments have ranged around 13-18 per cent of total investments in the Danish economy during recent years. 90 per cent of expenditure on wages and salaries in the public sector can be ascribed to institutions under the general government sector, while investments are more evenly distributed between market units and the general government sector.

In recent years a number of privatisations within the public corporate sector have been implemented. This has reduced the size of the public sector.

TDC A/S is an example of a company that has shifted status from public corporation to private enterprise, and consequently the company is no longer part of the public sector.

One fifth of the public sector's GDP were created by private corporations

18 per cent of the public sector's GDP at factor costs were created by public corporations in 2008, but only 10 per cent of total wage and salary costs were paid by the public corporations. At the same time, the public corporations account for 38 per cent of total gross capital formation of the public sector.

Figure 3

The public sector divided into general gov. sector and public enterprises. 2008

www.statbank.dk/off14

Figure 4
Public sector surplus (net lending) as a percentage of GDP

www.statbank.dk/nat01 and off3

Deficit on public finances in 2009

2009 showed a deficit on public finances. Between 1999 and 2008, there has been a surplus on public finances, except for a small deficit in 2003.

The years between 1975 and 1998 were primarily influenced by a deficit on public finances, except for the period between 1986 and 1987 which saw a short period of economic recovery.

Changes in the economic business cycle have a significant influence on public finances. Periods of economic recovery reduce the costs of unemployment benefits and simultaneously increase revenue from taxes and duties. The opposite applies in periods of recession.

Fall in net debt of the public sector since 1999

A surplus or a deficit on public finances gives rise to a surplus or a deficit on the public balance. The size of net debt is significant to the future economic development by having an impact on the fiscal-policy scope in the future.

The municipal and regional sectors are not entitled to incur any debt by themselves. Consequently, the large fluctuations in net debt are primarily due to debt incurred by the central government sector.

Since its peak in 1998, public net debt has declined from 35.1 per cent of GDP to a surplus of 5.1 per cent of GDP in 2009.

3

General government sector, public expenditure

Figure 5
Current and capital expenditure as a percentage of GDP

www.statbank.dk/nat01 and off3

Figure 6
Employment in the general government sector as a percentage of total employment

www.statbank.dk/nat18 and nat18x

Increase in public expenditure in 2009

The size of the general government sector is decided politically and depends on economic and social structure conditions. The expansion of, e.g. education, social conditions and hospitals in the 1970s gave rise to a sharp growth of the public sector. Furthermore, women's participation in the labour market resulted in an increasing demand for child care.

The increase in the proportion of current and capital expenditure of GDP peaked in 1994. Between 1994 and 2008, there has been a tendency towards a fall in the proportion of current and capital expenditure of GDP. In 2009 the proportion of current and capital expenditure of GDP increased and now accounts for 58.4 per cent of GDP.

Stagnation in the number employed by the public sector since 1993

The most important factor of production in connection with public production is labour (e.g. teachers, doctors and employees in public administration). About 2/3 of general government consumption comprise wages and salaries. In 1970, the number employed by the general government sector amounted to 21.2 per cent of the total number employed. In 1993, this proportion had increased to about 30.8 per cent, but has since then remained largely constant.

Expenditure by type of transaction

Expenditure by type of transaction shows general government expenditure divided by activities. The distribution of expenditure by type of transaction distinguishes between consumption, current transfers and capital expenditure. Consequently, expenditure by type of transaction shows whether expenditure covers intermediate consumption, reallocation, or capital formation. General government consumption mainly comprises salaries and purchases of goods used in the production of services, which are made available to the public. Current transfers are primarily transfers to households, including pensions and unemployment benefits. Capital expenditure covers, e.g. investments in schools, hospitals, and roads.

Figure 7 Public expenditure¹ by type of transaction

¹ General government current and capital expenditure, including consumption of fixed capital plus sales of goods and services.

www.statbank.dk/off14 and off3

From 1975 until the mid-1990s, public expenditure accounted for a falling share of total public expenditure, while current transfers accounted for an increasing share. From the mid-1990s until 2008, there was a slight increase in the share of public consumption expenditure, while current transfers accounted for a minor fall. The percentage of capital expenditure has fallen until the mid-1980s, but has since then showed a relatively constant share of public expenditure.

Public expenditure by function

The distribution of expenditure by function distinguishes public expenditure by function. Public expenditure by function provides an overview of the mutual size distribution of expenditure among the individual categories, e.g. health, defence, education, etc.

The distribution of expenditure by function has been more or less stable since 1970. However, there has been a slight increase in expenditure on social conditions, which has been compensated for by a reduction in the proportion of expenditure on overall general government services and economic services.

Figure 8

Current and capital expenditure by function. 2009

www.statbank.dk/off23

Expenditure on overall public services along with defence, public order and safety, are categories for which expenditure has historically been the basis for the general government sector. Expenditure on general public services amounts to 14 per cent of total public expenditure and comprises general government administration, etc. Defence, public order and safety both respectively accounted for 2.0 per of the resources.

Education, health and social security are functions which are considered core services in a modern welfare state. 71.5 per cent of expenditure in 2009 was spent on these important functions. Expenditure on social security accounts for the largest amount of resources (43.3 per cent). This includes expenditure on, e.g. old-age pension, unemployment benefits, and cash benefits. Expenditure on education and health amounts to 13.5 per cent and 14.7 per cent of total expenditure, respectively. 5.4 per cent of expenditure was spent on economic services, which include especially expenditure on economic, trade, labour market plus transport, communication, and other business services. 1.0 per cent and 2.9 per cent, respectively, are spent on housing and public facilities and on religion, leisure and culture.

4

Funding general government expenditure

Figure 9
Taxes and duties as a percentage of GDP

www.statbank.dk/nat01 and off12

Taxes as per cent of GDP relatively stable since 1988

General government expenditure is reflected in a similar need for funding where taxes and duties in particular play a decisive role.

In the years from 1975 to 1988, the share of taxes and duties of GDP increased from 38.4 per cent to 49.4 per cent. Since 1988, this proportion has remained almost constant and was 48.3 per cent in 2008.

No changes in the tax structure for 30 years

Total taxes can be divided into four main types: Income and property taxes, production and import taxes, capital taxes and compulsory contributions to social security schemes.

Income and property taxes account for the largest share of total taxes. Income and property taxes are taxes on incomes earned by individuals and enterprises (e.g. personal taxes, corporation tax, real interest tax), and taxes linked to the possession of property (e.g. vehicle excise duty).

Production and import taxes are other large items, which primarily comprise VAT and various selective excise duties. Some production and import taxes are used to influence the behaviour of people and companies (e.g. “green” taxes and duties).

The last two items, capital taxes and compulsory contributions to social schemes, are not significant in terms of revenue. The latter is important in other countries where many welfare benefits are funded by compulsory contributions and where social benefits are granted with reference to people's attachment to the labour market.

Figure 10 National accounts distribution of total taxes and duties

Distribution of tasks and burden between the sub-sectors**Division of responsibilities between the sub-sectors**

The general government sector can be divided into the following sub-sectors: municipalities, regions, the state and social security funds. In Denmark, there is a high degree of division of responsibilities between the individual sub-sectors. This division of responsibilities can be described by distributing expenditure according to tasks and burden. The distribution of tasks shows expenditure according to the sector that is responsible for such tasks in relation to the public. The sector funding the expenditure is shown by the distribution of burden.

The state covers more of the expenditure than the division of responsibilities dictates. Regions (from 2007), social security funds, and especially municipalities cover less expenditure than is dictated by the division of responsibilities. This is because the state refunds the other sub-sectors for a number of costs, particularly statutory costs in the social area.

Figure 11 Distribution of tasks and burden between sub-sectors. 2008

6

International comparisons in EU27 in 2008

On 1 January 2007, the EU was enlarged by two Eastern and Central European Countries: Bulgaria and Romania. EU was founded with European Coal and Steel Community in 1952 by the countries: France, West Germany, Italy, Belgium, Luxembourg and the Netherlands. EU has since then been expanded in 1973, were Denmark joined, 1981, 1986, 1995, 2004 and latest in 2007. The biggest enlargement was in 2004 where EU was expanded with ten Eastern and Central European Countries.

Size of the public sector

There are in the EU great variations in the size of the public sector measured in terms of total public expenditure as a per cent of GDP, from 34.8 per cent (Slovakia) to 53.0 per cent (Sweden). These variations may reflect either a political choice or the stage of development of the country.

There is a tendency for the size of the public sector to increase concurrently with the development of a country. Consequently, the size of the public sector is greater in industrialized countries, compared to developing countries.

Figure 12 Public expenditure as a percentage of GDP in EU. 2008

Source: Eurostat, table tex00023

Comparison of taxes

There are in the EU great variations tax burden (taxes and duties as a per cent of GDP), from 28.1 per cent (Romania) to 48.2 per cent (Denmark). Comparisons between countries should be made with caution, as the tax burden depends, for example, on whether income transfers (old-age pension, etc.) take place as net transfers, gross transfers or allowances. Net transfers are transfers that are tax free for the recipient, while gross transfers are subject to tax. In Denmark, gross transfers are most prevalent, which means that tax revenues are greater.

Figure 13 Taxes and duties as a percentage of GDP. 2008

Public EMU deficits/surpluses and EMU debt in the EU

In the European Economic and Monetary Union (EMU) great importance is attached to sound public finances. The EMU criteria are a guideline for the fiscal-policy situation in the EU and cover the public EMU deficits/surpluses and EMU

debt. The EMU criteria prescribe that the deficit of the EU Member States must not exceed 3 per cent of GDP and EMU debt must not exceed 60 per cent of GDP.

Figure 14

EMU surplus and EMU debt as a percentage of GDP in EU. 2008

Source: Eurostat, table teina200 and tsieb090

The total deficit for EU was 2.3 per cent. In 2008, the public EMU surplus was high in, e.g. Denmark, with 3.4 per cent of GDP and in Finland with 4.5 per cent of GDP.

There are eleven countries whose deficit is above the threshold of 3 per cent. Two of these countries are Latvia and Greece with EMU deficit of 3.2 per cent and 7.7 per cent, respectively.

The total EMU debt of EU was 61.5 per cent of GDP in 2008. In other words, the average of EU is above the fixed limit of 60 per cent. The EMU debt of Italy and Germany was high with 105.8 per cent and 65.9 per cent of GDP, respectively, while the EMU debt of Estonia and Luxembourg was low with 4.6 per cent and 13.5 per cent of GDP, respectively. In 2008, Denmark's EMU debt was 33.5 per cent of GDP.

The money and capital markets

1

Capital intermediation

Capital transfers from lenders to borrowers

A capital market is a market where financial products are traded, such as loans, shares, bonds and credit. The market makes it possible to transfer capital from persons with a savings surplus to persons with a savings shortage. This allows the individual to time his investments and consumption in relation to his earnings.

The purpose of the money market is to ensure a smooth payment mechanism so that transactions can be completed against payment without any major costs or difficulty.

Thus, the money market concerns the liquidity applied for transfer of payments in connection with financial transactions. There is no clear dividing line between the money market and the capital market.

Increased internationalization

Since the early 1980s, the Danish financial markets have seen a distinct development towards deregulation, internationalization and increasing competition. Danish citizens can make foreign investments or raise loans abroad without major difficulty or costs.

The free movement of capital has together with a credible exchange rate policy led to equalization of the prices (interest rates) of the financial products between the countries.

In 1980, the difference between the Danish and German long-term bond interest rate was 10.6 percentage points; in 2007 it was down to 0, but in 2008 and 2009 it increased a little.

Figure 1 Interest rate on 10-year government bonds

www.statbank.dk/dnrenta

Long-term interest rate reached 21 per cent in 1982

The interest on a financial claim reflects the lender's compensation for the postponement of the opportunities of consumption. A distinction is made between short-term and long-term interest rates, i.e. the interest rates on short-term and long-term claims.

Usually, the banks' three-month interest rate is applied as an indicator of the short-term interest rate, while the interest rate on ten-year government bonds is the indicator of the long-term interest rate.

The short-term interest rate can be controlled centrally. The central bank of Denmark (Danmarks Nationalbank) can adjust the volume and price of liquidity in relation to the banks. The interest that the banks receive from or pay to Danmarks Nationalbank influences the interest rates fixed by the banks vis-à-vis their customers.

The long-term interest rate reflects other market-driven factors, first of all inflation and risk expectations. The longer the term of the claim, the greater influence will these factors have on the fixing of the interest rate. The long-term interest rate will usually be higher than the short-term interest rate.

In 1981, the short-term interest rate was as high as 21 per cent per annum, partly because of high inflation expectations.

Government purchased foreign currency to keep the krone rate down

The rate of the Danish krone depends on the supply and demand for foreign currencies. The demand for foreign currency increases at import payments and capital exports (e.g. when Danes purchase foreign securities or make investments abroad).

Conversely, export payments and capital imports will increase the demand for Danish kroner. An increased demand for foreign currency will force the exchange rate upwards and the rate of Danish kroner will decrease.

Danmarks Nationalbank trades in the foreign exchange market with a view to stabilise the krone rate through purchases and sales of foreign currency against Danish kroner. Thus, the primary purpose of foreign exchange reserves is to enable Danmarks Nationalbank to use intervention as a tool to maintain a stable exchange rate between the krone and the euro.

Purchases of Danish kroner thus tend to strengthen the krone rate, while sales of Danish kroner, i.e. purchases of foreign currency, tend to weaken the krone rate.

The volume of the Danish foreign exchange reserves has increased substantially since the early 1990s to 2003. This indicates that in the past decade Danmarks Nationalbank has made more purchases than sales of foreign currency in net terms to keep the krone rate down.

Since 2003 the Danish foreign exchange reserves has decreased once again, and especially in 2006 the foreign exchange reserves has fallen substantially. However, in 2008 and 2009 the reserves increased once again.

Figure 2 Foreign exchange reserve

www.statbank.dk/dnivl

Denmark participating in ERM II

Since 1 January 1999, Denmark has participated in an exchange-rate co-operation with the European Central Bank (ECB) for the EU member states, which do not participate in the European Monetary Union. Since June 2004 Denmark, which at the time was the only member, has been accompanied by Estonia, Lithuania, Latvia, Cyprus, Malta and Slovakia. The agreement is called ERM II (Exchange Rate Mechanism II) and is very similar to the former co-operation under the European Monetary System.

The purpose of ERM II is to retain the exchange rates within the agreed fluctuation band on ± 15 per cent in relation to the central rate. Denmark has a narrower fluctuation band on ± 2.25 per cent in relation to the central rate. In case of extraordinary pressure on the krone, in addition to selling some of its foreign exchange reserve Denmark may draw on an intervention credit/euro account with the ECB. Thus, the ERM contributes to stabilizing the krone rate in relation to the European currencies and the euro, but not in relation to other major currencies such as the US-dollar or the yen.

2

Financial claims

Money as a means of payment

Today, the function of money as a means of payment is based exclusively on trust. If a seller is to accept money as payment for his product, he must be able to trust that others will also accept money as the means of payment. In case of high inflation, the value of money as a means of payment will drop.

Until 1931, the value of notes and coins could be converted into gold at Danmarks Nationalbank. Although the gold convertibility was subsequently abolished, the gold standard existed formally until 1971. This implied that Danmarks Nationalbank had a duty to maintain gold reserves corresponding to the value of notes and coins in circulation. Today, money is still claims against Danmarks Nationalbank, but these claims are no longer covered by the gold reserves of Danmarks Nationalbank.

Figure 3 Dankort (debit card) sales and notes and coins in circulation

Table 407 and 412

Difficult to estimate the money stock

It is increasingly difficult to estimate the amount of liquidity available in the Danish society. Because of the use of Dankort (debit card), various types of accounts related to the Dankort have become just as liquid as notes and coins.

At the same time, certain credit facilities may be connected to the Dankort, just as foreign banks may provide credit facilities to Danish citizens.

Because of Denmark's position as a small, open economy with free capital movements, the role of the money stock as a monetary policy target figure is no longer as important as before.

Danish mortgage bonds are internationally unique

Bonds are liquid, standardized debt instruments with low risk and a fixed repayment profile. Before the introduction of the euro, the Danish bond market was among the largest in Europe¹. The market is dominated by government bonds and mortgage bonds.

Mortgage bonds are secured by real property and have long maturity (up to 30 years). The Danish mortgage bonds are unique to the Danish market in terms of their role in relation to home financing.

In addition to the security in real property, the relatively high degree of security relates to the terms and conditions associated with the loan assessment by the mortgage credit institutes concerning lending limits, maturity and accumulation of reserve funds.

At the end of 2009, about 11 per cent of the total bond volume was owned by foreign investors. In recent years, foreign investors have shown an increasing interest in mortgage bonds. Thus, 8 percent of mortgage bonds were held by foreigners at the end of 2009 compared to about 5 per cent in 1996.

¹ Following the introduction of the euro on 1 January 1999, the euro markets are no longer divided into regions, but constitute a single market.

Figure 4 Shares and bonds traded on the Copenhagen Stock Exchange

www.statbank.dk/dnvpdkb

Shares are risky investments

A share is a certificate of ownership of a company. The value of the share depends above all on the future earnings of the company. Since future earnings are connected with great uncertainty, investing in shares may lead to both large losses and large gains.

In addition to specific expectations of the company in question, the share price also reflects more general expectations of the particular industry and the economy at large. Minor changes in market information may create substantial fluctuations in the market.

The Danish stock market is not as large as the bond market. It reflects the Danish corporate structure, which is characterised by many small and medium-sized enterprises without the tradition found abroad of entering the stock market to finance their need for capital.

In 2008, 203 companies were listed on the Stock Exchange, of which the 20 largest accounted for 64 per cent of the total volume of listed shares.

Various indices are used as indicators of the development in the stock market. The most commonly used are the all-share index OMXC shown above, which shows the market value of all listed shares, and OMXC20, which is a weighted market value index of the 20 largest and most traded shares.

There has been a trend of increasing prices reflecting the trends in the international markets. In 1998, 2001, 2002, 2007 and 2008, price decreases were widespread and in line with the share price development in the foreign markets. In 2009 the prices raised again.

Enterprises in the financial sector**Banking, mortgage lending and insurance activities still separate**

Since the early 1980s, the business areas in the financial sector have overlapped. Today, banks offer their customers pension schemes that are very similar to the schemes offered by life insurance companies. However, it is still prohibited to carry on banking, mortgage lending and insurance activities in one and the same company.

New legislation made it possible to set up holding companies and intercompany ownership among the financial companies. This implies that a mortgage credit institute may own a bank and vice versa. As a result, the capital market has seen a number of mergers and group formations.

In that connection financial supermarkets have emerged where consumers can handle all their financial commitments through the same provider.

Few large and many small banks

The banking sector handles functions in connection with payment and credit transfers, securities trading and related services. Despite the mergers among the major banks in recent years, a large number of small banks remain.

At the end of 2008, 138 banks were registered, of which the two largest account for 71 per cent of the balance sheet total in the sector.

The lending activity in the banking sector is often in focus because it is highly sensitive to market fluctuations and may be seen as an indicator of growth in for example consumption and investing activities.

The interest margin, i.e. the difference between lending and deposit interest rates, also attracts attention. However, an increasing proportion of the banks' earnings derive from charges and fees.

Figure 6

The banks' earnings by type

www.statbank.dk/mpk39

Lending activity of mortgage credit institutes depends on interest changes

In Denmark, only mortgage credit institutes may carry on mortgage credit activities. Mortgage credit activities mean lending against registered security in real property based on the issue of mortgage bonds.

Presently, there are eight players in the market. The lending activity is primarily influenced by the development in interest rates. Upward or downward fluctuations will trigger waves of re-mortgaging, where borrowers seek to convert their loans to obtain more favourable terms of repayment.

Increasing share of personal savings with insurance companies and pension funds

Distinction is made between non-life insurance and life and pension insurance. The different types of insurance may not be offered by the same company, but may be connected through inter-company ownership. Particularly the life and pension insurance business has increased in recent years.

Due to the development of labour market pension schemes and various forms of tax privileges in connection with pension contributions, an ever-increasing share of personal savings are managed by the pension funds and life insurance companies, which have thereby become important players in the financial markets.

Vigorous expansion in investment associations

An investment association is an association that invests the funds received as contributions from its members. The members are often small savers, but may also be life insurance companies, pension funds and foundations. The advantages of acting jointly are lower administrative costs and enhanced possibilities for risk diversification.

The investment associations have expanded vigorously over the past few years. The balance sheet total has increased from DKK 290 billion at the end of 2002 to DKK 569 billion at the end of 2008. In 2008, there were 132 investment associations issuing investment fund shares.

Faroe Islands and Greenland

1

Population of the Danish Kingdom

If you want more information ...

Since the first issue of the *Statistical Yearbook* in 1896, Statistics Denmark has published figures for the Faroe Islands and Greenland.

Today, the Faroe Islands and Greenland have their own statistical institutes, which can offer a far greater amount of figures and data than those presented in this yearbook.

The statistical institutes of the two countries can be found at the websites: www.hagstova.fo for the Faroe Islands and www.stat.gl for Greenland. A yearbook containing detailed statistics is also published by Greenland.

The reports prepared by the Chief Administrative Officer in the Faroe Islands and Greenland are also useful sources for your information.

Figure 1 Population trends in Denmark, the Faroe Islands and Greenland

One kingdom – three different communities

The Faroe Islands and Greenland are both part of the Kingdom of Denmark, going back as far as the Early Middle Ages.

During the 20th century, the two countries have gradually liberated themselves from Denmark and have today independent home rule.

Home rule was established in the Faroe Islands in 1948 and in Greenland in 1979. The home rule authorities in the Faroe Islands and Greenland make legislation governing their own social and economic conditions, e.g. fishing, housing, schools, trade and industry, municipal matters, etc., whereas issues regarding foreign, security and legal policies are joint responsibilities governed in accordance with Danish legislation.

Over the years, the Faroe Islands and Greenland have become financially less dependent on Denmark, but still receive financial means from the Danish state.

In 2008, the Faroe Islands received general grants of DKK 616 million, while Greenland received DKK 3,301 million. In addition to this, the Danish state pays the expenditure on operating, e.g. the legal system and defence.

Small population in relation to the Danish population

The size of the Danish population is far greater than the population size of the Faroe Islands and Greenland.

Denmark has a population of about 5.5 million people, while the populations of the Faroe Islands and Greenland are 49,000 and 56,000 people, respectively. A medium-sized Danish provincial town has, for comparison, a population of about 50,000.

The economic crisis in the Faroe Islands in the middle of the 1990s

While Denmark and Greenland have seen a small increase in the size of their populations since 1990, the Faroe Islands experienced a sharp decline in the population size in the middle of the 1990s.

The main reason for this was an economic crisis involving negative growth and a steadily increasing unemployment rate.

Furthermore, the foreign debt of the Faroe Islands was nearly 150 per cent of GDP. Not until 2003 was the population size the same in the Faroe Islands as in 1990.

Figure 2 Unemployment in Denmark, the Faroe Islands and Greenland

More children born in the Faroe Islands...

In all three communities of the Kingdom of Denmark, women give birth to fewer children today, compared to almost 40 years ago. In 1970, women in the Faroe Islands gave birth, on average, to 3.4 children, compared to 2.5 children today.

Figure 3
Fertility rates

Note: Figures from Denmark are from 2009, Faroe Islands from 2007 and Greenland from 2008.

In Greenland, women on average gave birth to 2.7 children, compared to 2.2 today, and in Denmark women gave birth to almost two children in 1970, compared to 1.8 today.

Consequently, there has been a greater fall in fertility in the Faroe Islands compared to the other communities, but women in the Faroe Islands still account for the highest number of births.

... and people in the Faroe Islands live longer

The Faroe Islands also account for the highest life expectancy. The average life expectancy of men in the Faroe Islands is 77 years, while that of Danish men is 76 years, and that of men in Greenland is 67 years.

Similarly, women in the Faroe Islands live, on average, until the age of 82, while Danish women live until the age of 81, and women in Greenland until the age of 72.

2

Economy of the Kingdom of Denmark

Small economies in relation to the Danish economy

The economies of the Faroe Islands and Greenland are very small compared to the Danish economy. The Danish gross domestic product (GDP) amounted to DKK 1,660 billion in 2009 and GDP of Greenland was about DKK 11 billion in 2006. In 2006, GDP of the Faroe Islands almost reached DKK 12 billion.

Figure 4 Trends in GDP at current prices

www.statbank.dk/nat01

Fishing is of great importance for Faroe Islands and Greenland

In addition to the general economic development, developments in the economy in the Faroe Islands and Greenland have been influenced by the fishing industry. The economy of Greenland is especially vulnerable to prices for prawns.

Figure 5
GDP per capita at
current prices

www.statbank.dk/nat01, bef1a, bef1a07 and folk1

The economy of the Faroe Islands is also highly dependent on the fishing industry, including number of fishing days, developments in farmed salmon and prices for, e.g. prawns and cods.

Despite reasonably good growth rates at the end of the 1990s, the Faroe Islands saw negative growth in GDP in 2003, but this tendency changed to a high growth rate in 2006.

It is a general feature of the economies of the Faroe Islands and Greenland that they are vulnerable to fluctuations in a single industry, i.e. the fishing industry, and consequently experience greater fluctuations in growth rates than Denmark.

The Faroe Islands accounts for the highest rate of inflation

In recent years, the Faroe Islands have experienced the highest increase in consumer prices. While Denmark and Greenland have had an average rate of inflation of, respectively, 2.6 per cent and 2.7 per cent since 1995, the rate of inflation in the Faroe Islands has on average ranged at 3.4 per cent in the same period.

International statistics

1

Trends in the world population

World population is growing

The world's population almost quadrupled during the 20th century. In 1900, the world population was 1.65 billion and in 2010, the world population is estimated at 6.9 billion.

This trend gained momentum in the 1960s until the 1990s, with a growth rate around 20 per cent every decade. In 2050, the world population is assumed to be about 9.2 billion.

Figure 1 World population

Source: UN's population forecast

We are also getting older

Simultaneously with the growing world population, we also live longer. In 1960, the average life expectancy for all new-born children in the world was 50 years. In 2009, average life expectancy increased to more than 67 years. In 2050, average life expectancy is assumed to have increased to 76 years.

The figures reflect major differences among countries and continents. A Japanese child born in 2009 can expect to reach the age of 82, while a child born in Swaziland in Africa can only expect to live until the age of 40.

Figure 2 Average life expectancy for the world's new-born children

Source: UN's population forecast

Most people live in Asia

There has been an increase in the world's population in all continents. As women in Asia and Africa give birth to a greater number of children, the share of the world's population has changed in the continents.

In 1950, the European population accounted for 22 per cent of the world's total population, while this share had decreased to 11 per cent in 2008.

Conversely, the Asian population has grown from 56 per cent of the world's population in 1950 to 60 per cent in 2008.

Figure 3 World population by continents

Source: UN's population forecast

2

World economy

Steady growth and increase in world trade

During the last 39 years, the world economy has steadily grown by an average real growth of 3.5 per cent per year of the world's total GDP.

The most marked recession during the period was in 2009, with a negative growth. Similarly, there has been a general increase in world trade since 1970, but the financial crises caused an extremely negative growth rate in 2009.

During recent years, consumer prices (inflation) have been historically low despite a spike in 2008.

Figure 4

Key indicators for the world economy

3

International statistics

International statistics since 1898

Ever since 1898, Statistical Yearbook has included a chapter on international statistics. Several of the statistics from back then are still shown today. This goes for instance for *area and populations in states and territories*.

Since then, some statistics have gone i.e. *the emigration to the USA*, while others have come such as *the EMU debt*. The selection of tables is meant to represent continuity as well as timeliness.

Harmonization

The development within the last 100 years has furthermore increased the need for international statistics regarding each country and therefore also comparisons between these countries.

Direct use of national statistics, i.e. each country's own statistics, for comparison between these countries, is not always possible as calculation methods often vary from country to country.

To ensure such comparability, international organizations go to great lengths to harmonize statistical terms (including establishing common nomenclatures) and calculation methods.

Harmonization can be anything from a set of guidelines (recommendations) to more direct requirements made of the statistical analyses which member countries submit to the relevant organization.

Organizations that publish statistics

The most central organizations that publish statistics (which are also included as sources in the section 'International tables' in the Statistical Yearbook) are:

Eurostat (Statistical Office of the European Union)

OECD (Organisation for Economic Co-operation and Development)

UN (United Nations) – *including:*

- **ECE** (Economic Commission for Europe)
- **FAO** (Food and Agriculture Organization of the United Nations)
- **ILO** (International Labour Organisation)
- **IMF** (International Monetary Fund)
- **UNESCO** (United Nations Educational, Scientific and Cultural Organization)
- **WHO** (World Health Organization).
- **World Bank**

International comparable statistics are published as printed statistical publications, as CD-ROMs, and in databases, which can be accessed via links from the website of the organizations publishing statistics.

Statistics Denmark's Library and Information

Statistics Denmark's Library and Information, which is the central reference library for descriptive statistics, houses Denmark's largest collection of international statistics.

The collection is constantly expanding and supplemented with the most recent material from the organizations that publish statistics.

In addition to the large number of printed publications and CD-ROMs, the Library also provides access to a great many international databases as well as the Internet. The Library is open to the public.

Note: Figures for EU countries cover 15-64 year-olds, while the age limit for other countries mostly is 15+. The figures are based on national Labour Force Surveys. For countries outside the EU the figures can be calculated slightly different in individual countries. This affects comparability. The different methods of calculation can also mean that the labour force for an individual country can vary from the sum of employed and unemployed persons.

Danish Industrial Classification and Standard Industrial Groupings

Danish Industrial Classification (DB) is a 6-digit classification of industries describing the economic activity. It was primarily prepared for statistical purposes. Danish Industrial Classification is directly based on the EU classification of industries NACE, and NACE is a sub-grouping of UN's industrial classification ISIC. The first two digits in Danish Industrial classification correspond to ISIC, while the first four digits correspond to NACE. Subsequently, there is a direct relationship between DB and international classifications, where DB contains a further sub-grouping of the industries that are relevant to analyse in greater detail in relation to the Danish industrial structure.

On 1 January 2008 Danish Industrial Classification 2007 (DB07) and new standard groupings came into force. From 1 January 2008 all enterprises are registered with a DB07 industry code. DB07 comprises 726 industry codes, thus the number of 6-digit industries is reduced, compared to the 825 industry codes used in DB03. Further information about DB07 is available at www.dst.dk/downloadDB.

Below, four standard groupings are shown with 10, 19, 36 and 127 groups, respectively. These groups form the basis of using DB07 in statistics published by Statistics Denmark. The four standard groupings reflect an increasing aggregation of detail in the classifications. The code structure is linked to the codes in DB07 and indicates where you are in DB07. The 10-digit grouping uses 1-digit serial numbers, whereas the 19-grouping comprises one letter. The 36-grouping comprises one to two letters and the 127-grouping uses five digits. The relationship between the standard groupings and the 6-digit industry codes can be found on Statistics Denmark's website at: www.dst.dk/downloadDB. The standard industrial groupings of DB03 are available at www.dst.dk/db03-en.

Grouping			Title	Grouping				Title
10	36			10	19	36	127	
1	A	A	Agriculture, forestry and fishing			CH		Basic metals, fabricated metal prod.

Definitions and glossary

Abortion	Legal: Induced abortion permitted by Danish law.
Abortion rate, general	The number of legal abortions that would be performed on 1,000 women during the reproductive period of their lives (ages 15-49), if <ol style="list-style-type: none"> 1) all 1,000 women lived to be 50 years old, and 2) each age group experienced the given year's age-specific abortion rates.
Acquisition of buildings, net	Denotes acquisition of properties where the existing buildings constitute the main element, less similar sales.
Acquisition of land and intangible assets, net	Comprises acquisition of properties where land constitutes the main element, less similar sales. This concept also includes the costs of permanent acquisition of various intangible assets (copyrights, etc.).
Active substances	Denotes the contents of active substances in individual pesticides, herbicides, or fungicides, i.e. without fillers, water, etc. The quantities of active substances vary with each product (from approximately 10 per cent to approximately 80 per cent of the marketed product).
Actual hours	Actual hours are the actual hours of work per week, including possibly actual over-time.
Added value	The added value is calculated as net turnover less consumption of goods.
Adult education and supplementary education	Comprises adult education and supplementary education after completion of basic school. The objective of such activity is to obtain or maintain competencies.
Age-specific fertility rate	Annual number of live births to women in a specified age group, per 1,000 women in the age group.
Agricultural holding	Farms or horticultural holdings. A technical economic unit comprising an area with buildings, machinery and livestock which is regarded by the owner of the agricultural holding as belonging to the same farm. Leased areas are included under the holding, while areas leased out are included under the holding which has leased the area.
Agricultural sector	Comprises agriculture, horticulture, fur farming, hunting, and bee keeping.
AIDS	Acquired Immuno-Deficiency Syndrome is the end stage of the HIV infection. At this stage, the human immune systems will operate so poorly that a large number of diseases may afflict the patient. International criteria on diseases which define AIDS. Cf. HIV.
Air quality	A measurement for the concentrations of various contaminants in air. Pure air contains 78 per cent nitrogen, 21 per cent oxygen, and 1 per cent inert gases, etc.
Alcohol licence	An enterprise with an alcohol licence is licensed to sell alcoholic beverages to its customers.

All income, total including net interest recieved	All income, total including net interest recieved is Income, total added rental value of home ownership and the net interest income
All-year assessment	Calculated assessment of the total number of taxable days, divided by 365.
Annual adjustments	Annual adjustments to the latest general valuation of real property which take into account price trends during the intervening period.
Appeals and complaints	A ruling made at the first instance may be brought before a higher court, i.e. the High Court or the Supreme Court, for a new ruling.
Area	In housing statistics, "area" comprises the total floor area of all floors of a building, measured to the outer surface of the outer wall, as well as habitable attic areas. Basement areas are not included.
Assets	Accounting term used to designate application of capital in accounts, i.e. the value of property, operating resources, and amounts receivable. The opposite of liabilities
Assistance under the Act on active social policies	Comprises assistance in accordance with the Act on active social policies and the Danish Social Assistance Act in the form of cash benefits, e.g. maintenance assistance or education assistance (rehabilitation benefits) for families or individuals who, due to social circumstances, find themselves in financial need without any opportunities for assistance under other legislation.
ATP - labour-market supplementary pension scheme	ATP is a compulsory pension scheme for employees within the 16-64 (before 2006: 16-66) year age bracket with at least 10 hours of work a week.
Auxiliary unit	A separately located local unit which produces ancillary materials or services to the enterprises serviced by this unit.
Average number of participants	For AMFORA, the average number of participants for any given period is calculated as the sum of the degrees of participation within the group.
Average number of unemployed	<p>This concept is frequently used within unemployment statistics (CRAM). The average number of unemployed persons illustrates the number of full-time unemployed persons in a given period.</p> <p>This is calculated by adding up the degrees of unemployment of all unemployed persons.</p>
Average turnover	Is defined as the total taxable turnover per registered unit for units which have been operational throughout the entire year.
Bachelor education	Comprises courses of 3 years of education. The courses were introduced in 1993 in connection with the structural reform of bachelor education, which is built on general upper secondary education as well as vocational education and training, and are a prerequisite of passing master degrees and PhD degrees.
Banks	Comprise Danish banks with a working capital (equity capital, capital base, and deposits) of DKK 250 million or more.
Basic prices	Are defined for domestic production as the price ex works excluding product taxes, net. For imports, basic prices are defined as the CIF value plus customs duties. Value added may also be defined at basic prices. (cf. Value added).

Basic school	Comprises grades 1 to 10. Grades 1-9 are compulsory. Grades 8-10 may also be completed at continuation schools.
BEC	Classification by Broad Economic Categories, prepared by the UN.
Benefits during sickness or in connection with childbirth	<p>Benefits which provide security in the event of loss of income due to sickness, injury, childbirth, or adoption.</p> <p>This scheme comprises all employed persons who reside in Denmark and are subject to Danish taxation.</p> <p>The scheme provides statutory security for employees as of the first day of absence as well as voluntary security for self-employed persons after two weeks of absence.</p> <p>The statistics only address the cases where local authorities pay benefits. In the event of sickness, private employers are normally required to pay benefits to employees during the first two weeks of absence, whereas public-sector employees are required to pay benefits during the entire period of absence.</p>
Births	Live births + stillborn.
Bonds	<p>Since the Danish Securities Centre was established in 1979, bonds no longer exist as physical entities.</p> <p>Market prices of bonds are set every day on the Copenhagen Stock Exchange and are issued in series by the central government, mortgage-credit institutions, other bond-issuing institutions, or enterprises.</p>
Books and pamphlets	Non-periodical printed publications which are made accessible to the public; books are defined as publications which comprise 49 pages or more, whereas pamphlets comprise 5-48 pages (excluding covers).
Building permits issued	Authorisation to commence building, issued by municipal building authorities.
Building, concept of	A "building" means a cohesive structure, mainly constructed from uniform materials and usually comprising the same number of floors throughout.
Building, main use of	This corresponds to the actual use of the building. Where several types of use apply, the usage which occupies the greatest floor area is registered.
Buildings started	<p>Physical initiation of construction.</p> <p>For commercial buildings for agriculture, etc., "buildings started" denotes the time of notification of construction work.</p>
Business unit	A legal entity which carries out one or more types of financial activity at one or more local units (enterprises).
Business unit	A local financial unit.
Business units registered for VAT settlement	Enterprises which are registered in the Danish custom authorities' register of units which are liable to pay value-added tax (VAT).
Capacity utilisation, hotels, etc.	Beds, i.e. the number of occupied beds compared to the total number of beds.

Capital accumulation	<p>Within public-finance statistics, capital accumulation comprises actual capital activities in the general government sector. Capital accumulation is calculated as follows:</p> <p>Fixed new assets</p> <p>+ Acquisition of existing buildings, net</p> <p>= Gross fixed capital formation</p> <p>+ Increase in stocks, net</p> <p>+ Acquisition of land and intangible assets, net</p> <p>= Non-financial capital accumulation</p> <p><i>Fixed new assets + acquisition of buildings (net)</i></p> <p><i>= Gross fixed capital formation</i></p> <p><i>Gross fixed capital formation + increase in stock (net) + acquisition of land and intangible assets (net)</i></p> <p>= Capital accumulation</p>
Capital formation	Acquisitions less sales of real property, operating machinery, and stock-in-trade.
Capital formation, net	<p>Additions less disposals of capital (fixed) assets, i.e. real property (land, buildings, etc.) and means of operation (machines, vehicles, furniture, equipment, etc.).</p> <p>Additions are calculated at purchase prices before depreciation and other adjustments and comprise bought as well as leased assets. Disposals are calculated at sales prices.</p>
Capital income	<p>Comprises interest, yield on securities, and calculated rental value of owner-occupied dwellings.</p> <p>Capital income includes interest on loans granted to non-residents, yields on shares in foreign companies, and profits made by Danish enterprises abroad. Costs include interest on loans raised abroad, yields on Danish shares owned by non-residents, and profits made by foreign companies at branches, etc., in Denmark.</p> <p>Within income statistics, capital income comprises net income from interest, including income from interest generated by self-employment, yields on shares, profits from sales of certain capital goods, and calculated rental value of owner-occupied dwellings.</p>
Capital income to and from abroad	<p>Primarily comprises interest on all loans taken out abroad by Danish individuals, companies, and public-sector institutions, as well as yields from Danish companies to foreign parent companies, shareholders, etc.</p> <p>Similarly, interest receivable and yields from abroad constitute income to Danish lenders, parent companies, etc.</p>
Capital transfers	Affect the capital of either the granter or recipient. Examples include plant and investment subsidies, certain damages, writedowns of loans, and similar payments. Such capital transfers are normally non-recurrent in nature.

Capital transfers to and from abroad	Comprises non-recurrent unilateral transactions between countries other than Denmark and the Danish public sector, Danish private enterprises, or Danish residents. Such transfers may be investment subsidies to or from EU institutions, inheritances, etc.
Car at disposal	A family has a car at its disposal when one or more family members own one or more passenger cars, and/or one or more family members own one or more vans without being associated with a commercial enterprise, and/or one or more family members has a company car at their disposal.
Cash price	Comprises the cash down payment on a property plus the market (bond) price of the mortgages.
Cash value	At the 17 th general valuation on 1 April 1981, the principle of cash value was introduced as the valuation method. At the instigation of the Danish tax authorities, the mortgage values were converted to cash values. At the 20 th general valuation on 1 January 1996, these valuations have been carried out directly at cash levels. (Construction and dwellings)
Charges	Suspicion of a criminal offence, laid down by the police.
Charges withdrawn	To refrain from bringing a charge against a person, e.g. where the case is considered negligible, brought against young persons, etc.
Chattels	Also known as "movables": Movable possessions, e.g. furniture and machines.
Child and youth allowance	<p>Subsidy paid regardless of income as ordinary and extra child and youth allowance to single breadwinners with children under the age of 18. Special child and youth allowances are paid to orphans, children of pensioners, children of widows/widowers, and children born out of wedlock where no-one has been designated as contributor.</p> <p>As of 1 April 2000, special child allowance to pensioners is earnings-related. Since 1 January 2001, special child allowance is also paid to families where at least one parent is enrolled for an education that entitles him/her to receive state education grants and loans. In such cases, the allowance is earnings-related.</p>
Child benefits	Under certain circumstances (i.e. according to agreement between the parents or when benefits are not paid on time), the municipality of residence pays advance child benefits (normal benefits) to children born out of wedlock or to children of separated or divorced spouses when the person entitled to benefits does not live together with the child's other parent. Advance payment of child benefits does not include benefits paid on time by the person obliged to pay them without the collaboration of the social committee.
Child living at home	A person under the age of 25 years, who lives at the same address as one or both of his/her parents who has never been married and do not have children by him/herself.
Civil administration of justice	Comprises legal action in cases which do not involve violations of the Danish Penal Code or special legislation, i.e. civil action in connection with e.g. enforcement proceedings, matrimonial proceedings, and paternity proceedings.
Commuting to and from work	A person is considered to be a commuter when s/he does not work and live in the same municipality.

Confirming	Confirming means that a financing company pays the debtor's (i.e. their client's) bills.
Consumer price index	The consumer price index is calculated on the basis of the actual retail prices paid by consumers for goods and services which form part of private consumption. The weights are compiled on the basis of the grouping of private consumption in Denmark used in national accounts in conjunction with information from the Household Budget Survey (HBS). From January 2001 the classification of household goods and services is based on the international classification COICOP (Classification of Individual Consumption by Purpose).
Consumer price index 1900 = 100	Until 1963, these indices have been based on statistics from the calculation of the retail price indices, less direct taxes, membership fees, etc. When these expense items are left out, the price basis for the indices from before 1964 is close to the principles applied to the consumer price index from 1964 onwards. The weights used for calculation of the retail price indices were based on living expenditure for wage-earning and salaried employee families according to the periodic HBS, while the weights used in the consumer price index from 1964 onwards have been based on total private consumption. These discrepancies of index construction have been ignored in the linking of indices in 1964, as experience shows that such variations are not significant.
Consumer-paid magazines	Periodical publications with informative and entertaining contents, published once a week or less, which are primarily aimed at families/family members. Funded by sales and advertising.
Consumption	<p>The consumption survey calculates consumption as the total expenditure of private households on goods and services which are purchased to satisfy needs. Calculation of expenditure on owner-occupied housing presents certain problems. For the purposes of the consumption survey, attempts have been made to solve this problem by calculating an approximate rent. This calculation is based on available statistics on rent in a corresponding rented dwelling, i.e. of a rented dwelling of the same size and age, situated in the same area and with the same amenities.</p> <p>The grouping of consumption is mainly in accordance with the principles used in the national accounts and is based on the European national-accounts system - ENS95. This system groups goods and services by their purpose.</p> <p>In its most detailed form, the consumption survey comprises approximately 1,200 individual types of consumption, each of which is identified by an eight-digit code. This code system facilitates immediate aggregation at various levels by eliminating the last digits. The Statistical Yearbook publishes these statistics at two- or four-digit levels, while the Statistiske Efterretninger publish more detailed statistics on foods. Even more detailed statistics are available as special services.</p>
Consumption of fixed capital	Is a measurement (at re-purchase prices) of the physical and technical deterioration of fixed assets.
Co-operative bank	A local bank which receives deposits from and grants credit/loans to its members.
Co-operative society	Also known as co-operative company, this is an association which has been established with the purpose of providing its members with goods or other necessities or of processing and selling members' products. Profits are usually distributed in equal shares corresponding to the participants' turnover with the society.

Copenhagen metropolitan area, the	Greater Copenhagen and, for the period 1 January 1970-1979, the following 18 municipalities: Albertslund, Ballerup, Brøndby, Dragør, Gladsaxe, Glostrup, Herlev, Hvidovre, Høje Taastrup, Lyngby-Taarbæk, Rødovre, Søllerød, Taastrup, Vallensbæk, Værløse, Birkerød, Farum, and Hørsholm. As of 1 January 1980, this area comprised another 7 municipalities: Ledøje-Smørum, Ishøj, Allerød, Fredensborg-Humlebæk, Karlebo, Greve, and Solrød. As of 1 January 1999, the following municipalities are no longer included in the Copenhagen metropolitan area: Ballerup, Dragør, Høje Taastrup, Ishøj, Ledøje Smørum, Søllerød, Værløse, Allerød, Birkerød, Farum, Fredensborg-Humlebæk, Hørsholm, Karlebo, Greve, and Solrød. These municipalities are now designated as urban/rural areas in accordance with the same principles which are applied to other Danish municipalities.
Couples	In family statistics, two adult persons living at the same address form a couple if they are either married to one another or have entered into a registered partnership, or if they have children together without being married to one another. The statistics also include couples living together who are unmarried and have no children together, if there are no other adult persons at the same address living with them, the two persons are of opposite sex and are not siblings and they have an age difference of 15 years or less. Young persons down to the age of 16 may be part of a cohabiting couple.
Court of First Instance	Comprises the first ruling in cases brought before the district court and High Court, including the Maritime and Commercial Court.
Crime rates	<p>In the survey of crimes and national origin, the age-related crime rates of various ancestry groups (immigrants, descendants or Danish) are compiled as index numbers, where 100 indicates the national average (i.e. numeric values over 100 indicate that the rate is above average).</p> <p>Furthermore, the crime rates are age-standardised implying that adjustments have been made so that the age distribution is not similar for the various ancestry groups.</p>
Criminal offences against the Penal Code	Comprises sexual offences, crimes of violence, offences against property, and other offences, including crimes against the State, perjury, selling narcotics, etc.
Crude birth rate	Annual number of live births per 1,000 population.
Current assets	Stocks, liquid holdings, outstanding amounts from sales, and easily realisable securities which are not intended for permanent ownership.
Current transfers	This category is used in statistics of public finances. They affect current disposable incomes. Current transfers mainly comprise transfers to households, which are divided into social transfers such as old-age pensions, early-retirement pensions, civil-servant pensions, unemployment benefits, cash benefits, sickness benefits, child allowances, etc., as well as rent subsidies. They also include other transfer incomes such as student grants, etc.
Current transfers to and from abroad	Include private cross-border donations and gifts as well as aid to developing countries. They also include transfers between Denmark and the institutions of the EU; i.e. income includes subsidies for Danish agriculture, while expenditure includes Denmark's contribution to the EU budget.
Custody	Deprivation of liberty in accordance with an order of court with a view to ensuring the presence of a person charged with a criminal offence.

Danish Broadcasting Corporation, the	An independent public institution with »public service« obligations. Its finances are based on license fees.
Danish Mortgage Bank, the	State institution which takes out state-backed loans abroad, etc.
Degree of participation	A degree of participation is calculated for all measures within labour-market policies. This is done on the basis of a registered start date, a known or scheduled end date, and information on the number of hours per weeks involved in the relevant measure. The degree of participation is calculated as the ratio between the number of days in which a person participates in the relevant scheme and the total number of days multiplied by the ratio between the weekly number of hours involved in the scheme and the potential number of hours per week.
Degree of unemployment and average degree of unemployment	<p>Within the unemployment statistics (CRAM), a degree of unemployment is calculated for each person who has experienced unemployment during the period. For <i>insured</i> persons, the degree of unemployment is calculated by comparing the number of hours of unemployment to the number of insured hours during the week. If a person is insured (against unemployment) for 37 hours a week and that person is unemployed for 19 hours, s/he will have a degree of unemployment of 0.514; if the same person had been insured for 26 hours a week, the degree of unemployment would be 0.731. A person with a degree of unemployment of 1 is fully unemployed, i.e. that person has been unemployed for the number of hours for which s/he is insured during a given period. For <i>non-insured persons</i>, the degree of unemployment is calculated on the bases of whether they were unemployed at the middle of the week. If they are unemployed at this time, their degree of unemployment will be set at 1, otherwise it will be set at 0.</p> <p>An average degree of unemployment is calculated on the basis of individual degrees of unemployment. The average degree of unemployment illustrates the average duration of a period of unemployment. The average degree of unemployment is calculated by adding up the degrees of unemployment for the relevant period and dividing this sum by the number of persons who have experienced unemployment during this period.</p>
Descendant	A descendant was born in Denmark. None of the parents are both Danish citizens and born in Denmark. If there is no information on one of the parents and the person is a foreign national, the person is also regarded as a descendant. If one or either parents, who were born in Denmark, are granted Danish nationality, their children will not be classified as descendants. However, if parents born in Denmark maintain their foreign nationality, their children are classified as descendants.
Detached one-family house	Known as a "parcelhus" in Danish, this denotes a detached one-family house with is mainly or exclusively used as a dwelling, and which usually comprises only one dwelling.
Discount rate	Rate of interest which is calculated as a deduction in per cent upon sale or redemption of a claim. Danmarks Nationalbank's official discount rate: the basic rate of interest of the DN, which serves as the basis for stipulating interest rates for all outstanding accounts with banks.
Disposable income	Disposable income is the amount left for consumption and savings when direct taxes etc., maintenance payments and interests have been paid.

District papers	Periodical publications with limited, yet varied contents which are distributed to households free of charge. Their revenues are based on advertising.
Dwelling	One or more rooms mainly used for habitation which have their own access point and are situated in a permanent building.
Distribution of task/burden	<p>On the basis of the distribution of general government administration and services between central government, municipalities, and social funds, shows how tasks and the financial burden are distributed between sub sectors.</p> <p>Distribution of tasks within the public sector examines which sector or authority is directly responsible for carrying out a task, whether this is a service or a transfer to citizens. In many cases, the costs of the task may be fully or partly refunded by other public authorities.</p> <p>The distribution of burden shows how the final financial burden is distributed between the various sub sectors.</p>
Early-retirement pension	<p>Social pension benefit which may be granted to persons aged 18-64 years (before 2006: 16-66) upon application.</p> <p>This type of pension may be granted in cases of permanent reduction in the ability to work due to physical or mental disability (health-specific early retirement) or in cases where it is necessary to permanently secure the livelihood of a person for social and financial reasons (needs-specific early retirement).</p> <p>The criteria used in awarding such benefits and the monthly amounts paid vary with the various types of benefit: high, medium, standard, and increased standard early-retirement pension or disability benefit.</p>
Earnings	Earnings, when used as a collective term for wages and salaries, comprise all employee income pertaining to their employment, including wages/salaries, sickness benefits paid by the employer, holiday payments, and contributions to pension schemes made by both employers and employees. See also <i>Compensation</i> .
Effective krone rate	The index for the effective krone rate is a geometric weighting of the changes in the currencies of 25 of Denmark's most important trading partners.
Effective rate of interest	Comprises direct interest and the average drawing bonus. Direct interest is calculated by multiplying the nominal interest by 100 and dividing this figure by the bid price of the relevant security.
Elections	Elections to the European Parliament are held once every five years. Elections to the Folketing are held at least once every four years. Elections to county councils and municipality councils are held once every four years in November. Elections to local church councils are held once every four years amongst members of the Danish National Church.
Electronic commerce	Sales or purchases based on orders submitted through the Internet. In certain contexts, electronic commerce also includes orders submitted via other computer-based networks, e.g. by means of EDI (Electronic Data Interchange).
EMEP area, the	The EMEP area covers Europe and its marine areas.
Emission	Emission or discharge of contaminants in solid, liquid, or gaseous state.

Employed	Employed persons comprise employees, self-employed persons, and assisting spouses. In order to be classified as employed, a person must work, i.e. carry out work against some form of payment for at least one hour during the reference period. Moreover, persons who are temporarily absent during the reference period (due to sickness, holiday, leave, etc.) will be considered to be employed. Employees must be permanently associated with an employer in order for them to be considered temporarily absent.
Employee	A person with employment who receives wages or salaries.
Employees' Wage Guarantee Fund, the	This constitutes a statutory guarantee for employee claims as regards wages, holiday benefits, etc., in the event that their employer becomes bankrupt, their workplace ceases operations, etc.
Employment exchange	Labour exchange under the auspices of the Danish State is carried out by the Public Employment Service offices. The employment exchange carried out by Public Employment Service offices comprises part of the total employment exchange within the labour market. No statistics are available on the local-authority employment exchange, which was introduced in 1990.
Energy and resource taxes	Taxes, duties, etc., on electricity, gas, petrol, natural gas, and certain oil products. Also taxes on coal, coke, etc.
Environmental taxes	Comprises taxes and duties on waste, CO ₂ , SO ₂ , packaging, disposable cutlery, CFC, pesticides, herbicides, fungicides, raw materials, water supplies, NiCd batteries, and chlorinated solvents.
Equity capital	Owner's share of the capital. Calculated as total assets less total provisions and debt.
Expectation of life	The average number of years that a person of a given age can expect to live, assuming that age-specific mortality levels remain constant (i.e. the rates observed for the period under review). Thus, there are figures for mean life expectancy for each age.
Export value	Value FOB Danish port or free delivered border station.
Exports of goods and services	Comprises all goods (new and used) which, against payment or for free, take permanent leave of Danish financial territory for destinations outside Denmark, as well as all services supplied by Danish units to foreign units.
Factor prices	Factor prices are basic prices less other taxes on production, for example, motor vehicle weight duty and property taxes, plus other subsidies on production. This is the price level at which gross factor income (GFI) is estimated. Gross factor income is also called gross domestic product (GDP) at factor cost.
Factoring	"Factoring" denotes that a financing company offers loans secured on the debtors of the loan taker.
Family	One or more persons who live at the same address and who have specific relations to each other. A family may consist of a single person, a couple, or of a child under 18 years of age not living at home. Children under 18 living at home are regarded as part of their parent's families. See also "Singles" and "Child living at home".

Family allowance	Benefit paid regardless of income to all families with children under the age of 18 as a fixed amount per child. The amount paid depends on the child's age group (0-3 years, 4-6 years, 7-17 years).
Feed unit (FU)	A calculation unit based on the feed value. For example, one feed unit equals the feed value of 0.97 kg wheat, 1.00 kg rye, 0.98 kg Triticale, 1.05 kg barley, 1.26 kg oats, 0.92 kg pulses, or 0.61 kg rape. 1 FU for straw is 5.5 kg for wheat, oats and triticale, 5 kg for barley or 7.5 kg for rye. The calculation for green fodder and root crops is based on the dry-matter content.
Fertility	Total: The number of children that would be born alive to 1,000 women during the reproductive period of their lives (the 15-49 age bracket) if 1) all of the 1,000 women lived to be 50 years old, and 2) all these women gave birth to the exact number of children specified in a given year's fertility rates within each age group.
Films	Films shown in cinemas (long films) have a length of more than 1,600 metres of 35 mm. film (approximately one hour of film). Films of less than 1,600 metres in length are normally defined as short films (often documentaries).
Finance loans	Loans raised abroad, normally in a foreign currency, with a maturity of at least one year.
Financial intermediation services indirectly measured (FISIM)	Are calculated as the difference between bank interest receipts, etc., and bank interest payments (i.e. the interest margin). In accordance with international recommendations, this amount is subtracted from the sum of the gross value added by activity, with a view to incorporating the interest margin in production values within financial activities without having to carry out an estimated breakdown of the amount by intermediate consumption (raw materials and auxiliary materials) within corporations.
Financial transactions	Financial transactions within the balance of payments occur when e.g. the Danish central government, municipalities, or private enterprises take out loans abroad or when Danish securities are sold abroad. In both cases, this entails a deterioration of the external balance and a corresponding increase in foreign-currency reserves. This also applies when loans raised in Denmark by non-residents are repaid. Conversely, the granting of loans to non-residents and instalments paid on loans obtained abroad will improve the external balance while effecting a corresponding reduction in foreign-currency reserves.
First-time registrations of road motor vehicles	New motor vehicles which are registered for the first time. This does not include imported used motor vehicles which are registered for the first time in Denmark
Fixed assets	The part of total assets which are designated for permanent ownership or use by the company.
Fixed capital formation	Comprises expenditure on construction of new buildings (including dwellings) and civil engineering projects, purchases of transport equipment, machines, software, furnishings, etc. Also included are increases in farm stocks.
Foreign exchange reserves	Denmark's foreign-exchange reserves are Danmarks Nationalbank's holdings of liquid assets which can be used for foreign payments. The foreign-exchange reserves comprise the Danmarks Nationalbank gold reserves, claims against the IMF (SDR), claims against the European Central Bank, reserve position in the IMF, and net claims against other countries.

Freight service	Ships calling at Danish ports to discharge or load cargoes, including rock-fishing vessels. Rocks, etc., collected in the ocean are included in domestic cargo discharges.
Full-time employed persons	Shows the total amount of work measured as full work years. Employed persons who work part-time or who have only had employment for a part of the year are included at the relevant fraction. This is calculated on the basis of contributions made to the labour-market supplementary pension scheme (ATP), as these contributions vary according to the working hours put in.
Functional distribution of expenditure	The functional distribution of expenditure elucidates the purpose and objectives of public expenditure, i.e. how the public purse is spent. The statistics on general government utilise three main groups: principal public services, social and health services, and economic services. Expenditure which is not distributed according to function includes interest expenditure and other expenditure pertaining to debts within general government.
Fungicides	Chemicals used to combat fungal infections.
General fertility rate	Annual number of live births per 1,000 women of reproductive age (15-49 years old).
General government	General government comprises those authorities and institutions whose main function is to produce non-market public services and/or to carry out redistribution of the income of society. The demarcation of general government must be seen in relation to publicly-owned enterprises; these two in conjunction constitute the total public sector.
General social statistics	<p>Total annual calculations regarding recipients of transfer payments. This may involve <i>temporary benefits</i>, i.e. unemployment benefits, sickness benefits, maternity benefits, cash benefits, rehabilitation, leave benefits, activation, etc., or <i>permanent benefits</i>, i.e. old-age pension, early retirement pension/pay, etc.</p> <p>Calculations distinguish between <i>benefits experienced</i>, which are the types of benefits received by a single person during a year, and <i>principal benefits</i>, which constitute the dominant type of benefit (in terms of duration) received during a year</p>
General trade	Account which, in principle, comprises all imported and exported goods.
General upper secondary school	Provides students with qualifications for further education and comprises upper secondary school leaving examination (mathematics and languages), higher preparatory examination course (hf) and adult upper secondary level course (mathematics and languages).
Gold reserves	Danmarks Nationalbank's gold reserves are valued on the basis of the latest official quotation in London (»gold fixing«).
Goods	Within balance-of-payments statistics, both imports and exports of goods are calculated FOB, which means that deductions are made to the import statistics CIF given on foreign trade in order to adjust these statistics for added freight costs from sea transport. Foreign-trade statistics are also adjusted for items involving the Faeroe islands and Greenland, as well as for a number of minor items.
Goods loaded	Cargoes which have been loaded onto a ship at a port.

Goods transport performance	One tonne carried one kilometre - measured in ton-kilometres.
Goods unloaded	Cargoes unloaded from a ship at a port.
Government bonds	Bonds issued in Denmark by the Danish central government.
Greater Copenhagen Region	The municipalities of Copenhagen, Frederiksberg, and Gentofte.
Gross domestic income at market prices	Is calculated by deducting capital income and expenses for compensation of employees (net) outside of Denmark from the gross domestic product at market prices.
Gross domestic product at market prices	On the basis of production is production at market price less production consumption at purchase price. It can also be calculated on the basis of income as compensation to employees plus profit from production and miscellaneous income plus production taxes, net. Finally, it can be calculated on the basis of utilisation as the sum of all utilisation at purchase price less imports of goods CIF and services.
Gross domestic product in selected countries	The gross domestic product per capita is calculated as indices in relation to the average of EU27=100. If the index of a country is higher than 100, it implies that the GDP per capita of the country in question is higher than the EU average and conversely. The GDP per capita converted on the basis of purchasing power parities reflects volume differences among the countries, as the conversion takes into account differences in the price level among the countries. However, the conversion conducted on the basis of exchange rate does not take complete account of differences in the price level in the countries that are compared. This implies that the GDP could be overstated in countries with a high price level and understated in countries with a low price level.
Gross energy consumption	The quantity of energy products left after conversion at refineries and prior to conversion at utility works (electricity, gas, and district heating plants).
Gross freight	Income from freight generated by own or chartered ships.
Gross margin	Gross profit as a percentage of turnover.
Gross national disposable income at market prices	Is calculated by subtracting current transfers, etc. (net) to EU institutions and other countries from the gross domestic income at market prices.
Gross operating surplus and mixed income	Is calculated as gross value added at basic prices less other production taxes, net, and compensation of employees. Deduction of consumption of fixed real capital, will give the net production surplus and mixed income which is used as compensation for the self-employed in their own enterprise, and as interest payments on foreign capital, etc.
Gross operating surplus, general government	Is the part of the gross factor income which falls to the public sector itself. As the output of the public sector is calculated on the basis of costs, the gross operating surplus will correspond to consumption of fixed real capital, also known as provisions or reinvestment.
Gross profit	Is calculated as turnover less intermediate consumption less expenditure on wages, salaries and subcontractors.

Gross reproduction rate	Number of daughters that would be born alive to 1,000 women during the reproductive period of their lives (ages 15 through 49), if the 1,000 women lived to be 50 years old, and if at each age they experienced the given year's age-specific fertility rates.
Gross saving	Corresponds to gross national disposable income at market prices less private and government consumption. Gross saving is thus equal to gross capital formation + capital transfers, net, and net lending.
Gross tonnage	GT: is an abstract measurement which expresses the capacity of all the covered spaces of a ship This measurement has now replaced the Gross Registered Tonnage (GRT).
Gross value added at basic prices	Is equal to the gross domestic product at basic prices and is measured for each industry as output at basic prices less intermediate consumption at purchase prices and thus also equals the sum of other taxes on production, net, compensation of employees and gross operating surplus and mixed income. For society as a whole, gross value added can also be measured as gross domestic product at market prices less taxes on products, net.
Hectare	1 hectare equals 10,000 m ² , i.e. 100 hectares equal 1 km ² .
Herbicides	Weed killers, used to combat unwanted plant growth in crop farming.
HIV	Human immunodeficiency virus is a virus which attacks the body's immune system. A person infected with HIV will form antibodies against this virus and is designated as "HIV positive". See <i>AIDS</i> .
Holiday and business trips	Danes' holiday and business trips with at least one night spent away from home. This describes Danish travel patterns, age distribution, size of travel parties, organisation of the trip, and total expenditure on the trip.
Hotel	Enterprises which offer additional services, such as food for overnight guests. This group includes hotels, motels, inns, holiday centres, etc., which offer overnight accommodation to travellers.
Household consumption	Comprises Danish households' expenditure on goods and services in Denmark and abroad. When subtracting consumption by Danish residents abroad (expenditure on tourism, etc.) and adding consumption by non-residents in Denmark (income from tourism, etc.), the figure arrived at is "final consumption of households on Danish territory".
Households	Within the consumption study, "households" comprises persons who live together and who share financial arrangements. Lodgers, etc., constitute their own households.
IMF	The International Monetary Fund. The IMF reserves are calculated as the difference between the assets and liabilities of Danmarks Nationalbank as regards the IMF, i.e. the difference between the amounts paid by Denmark to the IMF and the IMF's holdings in DKK.
Immigrant	An immigrant is a person born abroad to parents (or a parent, where no information is available on both) who are foreign nationals or were born outside Denmark. Where no information is available on either parent, and the person in question is born abroad, said person will also be regarded as an immigrant.

Import value	CIF value at Danish port or border.
Imports of goods and services	Comprises all goods (new and used) which, against payment or for free, gain permanent access to Danish financial territory from destinations outside Denmark, as well as all services supplied by foreign units to Danish units.
Imprisonment	Deprivation of liberty, for life or for a period of time, ranging from 30 days to 16 years.
Imputed contributions to social security schemes	Are estimated contributions paid by civil servants, etc. These contributions correspond to the value of earned entitlement to retirement pensions which is added to their salaries. In practice, this contribution is calculated as the pensions paid by current pension schemes.
Income	In the national accounts, income equals the gross domestic product at factor prices. This is calculated by subtracting other production taxes (net) from the gross value added at basic prices.
Income, total	In income statistics, Income, total comprises the sum of primary income, transfer income, capital income (cf. these) and certain foreign types of income which cannot immediately be included in the scope of these types of income. In tables, describing family income, Income, total is the sum of Income, total for all individuals in the family.
Income at market prices	In the national accounts, this is obtained by subtracting capital income and expenditure on compensation of employees (net) abroad from the gross domestic product at market prices.
Income from land and intangible assets	Includes rent/leasehold fees, concession fees, etc.
Increase (new students admitted)	Within educational statistics, "increase" denotes the number of persons who, during a given period (1 October to 30 September of the following year) enrol for education. A student who changes from one type of education to another type within the same group of education is not included in increase statistics.
Increases / reductions in stocks	In public-finance statistics, this concept primarily denotes purchases of goods for intervention stocks and strategic stocks, less sales of such stocks.
Increases in stocks	In the national-accounts statistics, this comprises increases in stocks of raw materials and finished goods at production enterprises, wholesale and retail stocks, and increases in the stock of a number of goods on which special information is available, especially stocks, etc., within agriculture and EU intervention stocks in Denmark.
Index adjustment	For mortgage bonds/mortgage-credit bonds, this is carried out by adjusting the outstanding debt on the basis of the semi-annual changes in prices (in per cent) calculated on the basis of the net retail price index published by Statistics Denmark.
Industry	Grouping of employed persons by industry is carried out in accordance with Dansk Branchekode 1993 (DB93), which is based on definitions and groupings used in the 1990 EU industry-grouping code (NACE, rev. 1).
Industry grouping	Is based on DB07, which is the classification generally used by Statistics Denmark.

Industry unit	A group of enterprises within the same industry, owned by a single business unit.
Infant mortality	Number of deaths amongst the 0-1 age group per 1,000 live births.
Input-output	<p>An input-output table describes in detail the production structure in society and the use of goods and services.</p> <p>Subsequently, the table can be seen as a further specification of the three main accounts of the national accounts, namely accounts for goods and services, production and income formation, respectively.</p> <p>Consequently, the input-output tables are an integrated part of the national accounts statistics and are consistent with the national accounts data over each year as well as over time.</p>
Insecticides	Chemicals used to combat insects; used in crop farming.
Installation deficiencies	A dwelling has installation deficiencies if it lacks a toilet, a bath and/or central heating.
Interest and dividends, etc.	In public-finances statistics, this concept comprises actual nominal rate of interest as well as dividends, etc., less any losses.
Interest income	Within income statistics, "interest income" comprises both private and commercial interest income. The consumption survey includes private interest income only.
Interest payments, etc.	<p>In public-finances statistics, this concept comprises actual, nominal, or face interest, e.g. distributed losses on issue prices and expenditure on rental of land and intangible assets.</p> <p>Losses on issue prices are entered (depreciated) as loans are serviced.</p>
Intermediate consumption	<p>Is calculated as the value of goods and services used in production. Within general government statistics, intermediate consumption is defined as purchase of goods and services for current consumption.</p> <p>This includes expenditure on rent of premises, etc., insurance premiums, and indirect taxes and duties paid by the public sector itself.</p> <p>Moreover, part of the purchases of durable goods for the armed forces (weapon systems) is still considered to be intermediate consumption.</p>
Intermediate consumption	Consumption pertaining to turnover in the form of raw materials, energy products, etc., as well as direct costs pertaining to such purchases, e.g. customs and freight.
Intermediate consumption, etc.	Consumption of goods as well as expenditure on wages/salaries and subcontractors.
IT businesses	<p>IT businesses comprise enterprises/business units which supply products and services within electronics, IT, software, telecommunications, and other areas which are primarily based on information technologies.</p> <p>IT businesses can be divided into four sub-groups, i.e. IT manufacturing, IT wholesale, telecommunications, and IT consultancy services.</p>
Joule	Energy unit (GJ=10 ⁹ joule).

Labour-market status	Labour-market associations are calculated in accordance with ILO definitions. More detailed descriptions of this method are available in Arbejdsmarked 1998:21 (Statistiske Efterretninger). The survey of labour-market associations is carried out in week 48 prior to the population survey of 1 January. The labour-market status is determined by initially separating the group of unemployed persons, then separating persons who receive education, early-retirement benefits, pension benefits, transitional-benefit claimants, and persons on leave. All of these persons are classified as being outside the workforce. The remaining group are those who are employed. This method has been modified, so that persons who are receiving education are separated first and placed in the "student" group, regardless of their labour-market status.
Land value	Valuation of land pertaining to a property.
Leasing	"Leasing" means that a leasing company buys a leasing asset upon agreement with the future user of that asset. This asset is then leased - or rented - to the user.
Less developed countries	Less developed countries comprise all countries which are not defined as more developed countries.
Liabilities	Accounting concept which illustrates how the total capital (assets) is financed. The liability known as "equity capital" constitutes a residual between the other liabilities and assets.
Limited company (A/S)	Is a commercial company where all capital investors (shareholders) are liable for their investment only.
Limited partnership	An enterprise in which one or more general partners are liable for all debts and obligations of the enterprise as in a normal partnership, while the other participants (limited partners) are only liable for a specific amount.
Line service traffic	Denotes maritime traffic carried out by means of fixed routes and regular, scheduled round trips.
Listed bonds in circulation	The value of outstanding bonds (including Treasury notes, Treasury bills, and CMO bonds) which are listed on the Copenhagen Stock Exchange and registered with the Danish Securities Centre.
Live birth	A child delivered with clear signs of life (i.e. breathing, screaming, or crying) regardless of the duration of pregnancy.
Long-cycle higher education	Comprises both master's programmes and graduate studies as well as PhD degrees. MA education is of 1 to 2 years of education, master's programmes of 2 years and PhD degrees of 3-4 years of education.
Market activity	Is carried out by units with the objective of producing goods and services to be sold in the market or for own use or consumption, usually with a view to achieving profits.
Market prices	Correspond to buyers' prices. In the Danish National Accounts, this concept is only used for total figures (e.g. the gross domestic product at market prices).
Market value	For the net addition of listed bonds, market value is calculated as the gross addition at market price less drawings at par (nominal value) and other disposals at market prices.

Marriage quotient	Number of marriages per 1,000 residents.
Maximum equalisation percentage	Denotes the percentage of total incomes which must be transferred from income recipients with incomes greater than average to income recipients with incomes lower than average in order to achieve completely even distribution.
Mean population	The average number of persons within a specific group (e.g. married women aged 20–24 years) present within the Danish population during a specific period. As of 1989, this equals the population on 1 July (for Denmark and Greenland). For the Faeroe Islands, the previous calculation method is used, i.e. the average of the population numbers at the beginning and end of the year.
Median, the	Within income distribution statistics, the median is the income amount which constitutes the middle value, so that half of all those receiving income have incomes which are less than this amount, while the other half have incomes greater than this amount.
Medium-cycle higher education	Comprises courses of 2 to 4 years of education after upper secondary school education or vocational upper secondary school. Since 2000 it has been possible to pass a professional bachelor's degree following a medium-cycle higher course, which opens up the possibility of attending further education in connection with master's programmes and special graduate studies. Examples of medium-cycle higher education are nurses, school teachers and BSc engineering.
Migration surplus	Net immigration: Immigration less emigration.
Money stock	The money stock comprises notes and coins in circulation outside the banking sector plus demand deposits, deposits subject to notice of withdrawal, and time deposits made in banks by private households, local authorities, and non-financial enterprises.
More developed countries	More developed countries comprise all European countries excluding Turkey, Cyprus, Azerbaijan, Uzbekistan, Kazakhstan, Turkmenistan, Kyrgyzstan, Tajikistan, Georgia, and Armenia. This group also includes the USA, Canada, Japan, Australia, and New Sjøælland.
Mortality	Signifies the frequency (out of 100,000) of deaths during one year from one birthday to the next. Used in life tables.
Mortality rates	Summary: Number of deaths per 1,000 inhabitants. By age: Number of deaths within a given age bracket per 1,000 persons within the relevant age bracket.
Mortgage	Loan on mortgage/security on real property.
Mortgage deed	A document which stipulates the size and terms of loans against a mortgage in real property.
Mortgage deed registered to the mortgagor	Is a mortgage deed issued by the mortgage holder to himself with a view to pledging it as security for a loan.
Mortgage deed registered to the seller	A mortgage deed with the seller as creditor and the buyer of real property as debtor.

Mortgage-credit bonds	Bonds issued by the mortgage-credit institutions: BRF-Kredit A/S (BRF), Danske Kredit Realkreditaktieselskab (DK), Landsbankernes Reallånefond (LRF), Nykredit A/S (N), Realkredit Danmark A/S (D), TOTALKREDIT Realkreditfond (TK), Unikredit Realkreditaktieselskab (UK), FIH Realkredit (FIH), and Dansk Landbrugs Realkreditfond (DLR).
Multi-family building/ multi-storey building	Normally a building with two or more flats (rented or owner-occupied) which serve as dwellings.
Municipalities, counties and regions	<p>Until 1 January 2007, Denmark was divided into 271 municipalities; 268 of these constituting 13 separate counties. Bornholm, Copenhagen and Frederiksberg are not included in the normal division by county. Christiansø is not included in the general division of municipalities and is administered by the Ministry of Defence instead.</p> <p>From 1 January 2007, Denmark is divided into 98 municipalities and 5 regions.</p>
Mutual insurance companies	Associations of the insured.
National Church, the	According to the Danish constitution, the National Church is the evangelical-Lutheran protestant church. Membership is achieved through baptism.
National health insurance schemes	<p>Schemes which ensure that all Danish residents have access to treatment and health-services, regardless of health, age, and income.</p> <p>Regardless of income, those insured can choose between Group 1, which features free treatment by specified doctors, and Group 2, which offers treatment by doctors outside of the group specified in Group 1 at reduced fees.</p>
Naturalisation	Acquisition of Danish citizenship.
Net price index	The net price index is calculated on the basis of the prices paid by consumers for goods and services which form part of private consumption, less indirect taxes and duties and including price subsidies. The weights used are based on the classification of private consumption in Denmark used in the national accounts, used in conjunction with information from the Household Budget Survey (HBS). From January 2001 the classification of household goods and services is based on the international classification COICOP (Classification of Individual Consumption by Purpose).
Net reproduction rate	Number of daughters that would be born alive to 1,000 women during the reproductive period of their lives (ages 15 through 49), if the 1,000 women were annually reduced in number from age 0 according to the given year's age-specific mortality levels, and if at each age they experienced the given year's age-specific fertility rates.
New buildings completed	Buildings which have been authorised for use, temporarily authorised for use, or where the completion of the building has been ascertained regardless of any authorisation for use.
NH₄	NH ₄ is the chemical designation for ammonium. Ammonium is created in various ways, e.g. when farmers spread liquid manure, which contains ammonia, on their land. Ammonium is dispersed and transported by the wind, and the nitrogen contents of ammonium contribute to acidification processes.

Nitrate	Nitrate is a type of nutritive salt which contributes to algae growth and acidification in the aquatic environment.
Nitric oxides	Compounds of nitrogen and oxygen (NO and NO ₂) created through incineration processes. Nitric oxides are dangerous to health at high concentrations, and in the atmosphere may be converted into nitric acid, which increases the acidity of precipitation and contributes to algae growth.
Non-market activity	Such activity is characterised by being carried out by the public sector, by organisations and associations, or by private households with a view to »own« consumption.
Non-western countries	Non-western countries comprise all countries which are not defined as western countries.
Normal working hours	Normal working hours denote the usual weekly working hours, including any normal overtime.
NOx	NOx is a designation for nitric oxides, which are chemical compounds between a nitrogen atom and one or more oxygen atoms. Nitric oxides are spread by the wind and contribute to acidification of the environment.
Nuisance bonuses	Overtime bonuses, shift-work bonuses and various forms of bonus for dirty work.
Occupational accident	A sudden incident or case of poisoning at the workplace which causes the person involved in the accident to be unable to work for at least one more day than the day of the accident.
Occupational disorder	Any disease which is, or is assumed to be, caused by impacts from the working environment.
Official prices for regulation of farm rents	Called "kapitelstakster" in Danish, this concept denotes average producer prices generated from sales of barley and wheat from the onset of harvesting to the end of December of the harvest year. These official prices are calculated by Statistics Denmark and are mainly used in connection with tenancy contracts.
Old-age pension	A social-security pension for all persons over the age of 64 (before 2006: 66) who meet specific requirements on Danish citizenship and period of residence.
Ordinary free trade	Property sales except from family sales, forced sales, etc.
Other current transfers	Come from other domestic sectors, the EU, and other countries.
Other current transfers to and from abroad	Comprise unilateral transactions between other countries and general government institutions, companies, or individuals with Denmark as their country of residence. A few items which are treated as exports/imports of services in balance-of-payments statistics are also included in this group.
Other owner	Comprises state institutions, local-authority institutions, and associations.
Other services	Within the balance of payments, this denotes a series of transactions which involve a duration of time, such as transport by land and air, insurance, and licenses.

Owner	Within business statistics, "owners" comprise liable owners whose main activity/employment concerns the enterprise owned by them. This category includes assisting spouses.
Partnership	A firm with two or more participants who have entered into an agreement on operating a business together. The participants - partners - are fully liable to the company's creditors.
Passenger kilometre	Unit of transport, i.e. one person carried one kilometre.
Passenger-transport work	Is measured in passenger kilometres.
Persons without employment	See <i>Unemployed</i> .
Pesticides	Chemical products used to combat undesirable biological activity, such as insects, weeds, and fungi.
Population growth increase	Live births and immigration less deaths and emigration.
Population increase	Birth surplus or natural growth (number of live births less the number of deaths) + net migration (immigration less emigration).
Price adjustments, securities	Changes in the value of shares, mortgage-credit bonds, and mortgage bonds due to changes in interest rates since the last adjustments.
Price level indices	Price level indices are ratios of PPPs (purchasing power parities) to exchange rates. They provide a measure of real differences in price levels between countries. The EU price surveys indicate price level index in each country relative to the average of the EU. If a country has a price index higher than 100, it means that prices in that country are higher than the EU average and vice versa.
Price relationship	The relationship between two prices. This is used to elucidate changes in the relationship between the price of a product and means of production which are important to the production of this product.
Primary income	<p>Comprises salaries, wages, etc., including contributions to pension schemes administered by employers and net profits from self-employment.</p> <p>Business interest payable and interest expenditure is not included in the calculation of profits from enterprises, which is one of the reasons why it is not possible to carry out direct comparisons between the primary incomes of self-employed persons and employees.</p>
Principal public services	In principle, this main group consists of activities which are public by nature, i.e. activities which cannot be carried out by private individuals or enterprises. It includes the legislative branch, local authorities, local and general enforcement agencies, general financial policies and agencies pertaining thereto, general public personnel policies, centralised purchasing and sales, international relations, police activity, and defence activity. All of these activities must be considered indispensable to any organised society.
Private course organisers	Comprises course activity within the private sector, e.g. private training enterprises, employee and employer organisations, administration schools and a number of independent institutions.

Private consumption expenditure	Comprises the sum of final consumption expenditure of households and consumption within the group "Associations, organisations, etc." which comprises the final use of non-market production in private consumption-oriented, non-profit institutions.
Private limited company (ApS)	Is a commercial company where all capital investors (shareholders) are liable for their investment only.
Probation and prisons	The Department for Prisons and Probation is in charge of operating open and closed institutions, prisons, etc.
Production taxes	Comprises taxes/duties on products and other production taxes. The main elements of the latter group are property taxes and weight duties on motor vehicles which are used in production.
Property value	<p>Up until 1996, the value of real property (land and buildings) was normally determined by means of valuations carried out every four years and annual adjustments.</p> <p>As of 1998, values are determined by means of annual adjustments. The property value comprises land value and building value.</p>
Provisions	Liabilities, the size or date of maturity are not known with certainty, e.g. deferred taxes and pension liabilities.
Public consumption expenditure	<p>Within public finances, this constitutes an expenditure item and is obtained in the following way:</p> $\text{Compensation of employees} + \text{consumption of fixed capital}$ $= \text{Gross domestic product at factor cost}$ $\text{Gross domestic product at factor cost} + \text{intermediate consumption} = \text{production}$ $\text{Production} + \text{social benefits in kind} - \text{sales of goods and services}$ $= \text{Public consumption expenditure}$ <p>Public consumption expenditure (or consumption) comprises actual operating activities carried out within the general-government sector.</p> <p>More than half of total public consumption expenditure can be broken down by specific recipients: persons or households.</p> <p>The remainder constitutes collective public consumption.</p>
Public course organisers	Comprise state-subsidised public institutions for adult and supplementary education.
Public expenditure on culture	Public expenditure on culture comprises net current expenditure under the Ministry of Cultural Affairs and the allocation of funds generated by the Danish Football Pools Company for cultural purposes. This concept also comprises net current expenditure on culture at local authorities and counties.
Public libraries	According to the Library Act, all municipalities are under an obligation to maintain - alone or jointly - a public library where books and other materials are made available to adults and children free of charge.

Public quasi corporations	<p>Public quasi corporations have their accounts incorporated into central or local government accounts. The general government sector fully controls these companies, including all legal obligations and covers the operating deficits of the company or receives the operating profits of the company. This implies that these companies are only included in the statistics for the general government with regard to their profits or deficits. However, the general government's coverage of capital expenditure on, e.g. acquisition of new fixed assets does not appear from the statistics as the general government acquires in a statistical sense ownership certificates. Examples of quasi corporations are the Danish national railroads, municipal utility enterprises and part of the refuse-collection sector.</p> <p>The following preconditions apply to a public quasi corporation:</p> <ul style="list-style-type: none"> – The accounts are integrated into central or local government accounts. – Production is determined by the market, is manufactured on a large scale and is primarily sold to the private sector, i.e. revenue from sales constitutes 50 per cent or more of the current expenditure. – The corporations are run commercially.
Public roads	Roads which fall within the auspices of local authorities, county authorities, or the Danish Road Directorate.
Purchasing power parities	<p>Purchasing power parities – (also called PPP) are price relatives that show the ratio of the prices in national currencies of the same goods or service in different countries.</p> <p>Purchasing power parities are primarily applied for converting the GDP and other national accounts aggregates into internationally comparable aggregates. When purchasing power parities are applied for conversions into a common currency, differences in price levels are taken into account.</p> <p>However, when conversions are made on the basis of exchange rates, differences in price levels are not taken fully into account. In addition to this, purchasing power parities are also applied for calculation of the price levels in countries that are compared.</p>
Pure nutrients	Fertiliser consumption: contents of nitrogen (N), phosphorus (P), and potassium (K) in various types of fertiliser.
Quantity index	The quantity index illustrates the quantitative changes in imports and exports
Quartile (lower and upper)	<p>The lower quartile of an income breakdown is the amount which separates income recipients in two groups: one group numbering 25 per cent of the total group with incomes lower than the quartile, and a group numbering 75 per cent of the total group with incomes greater than this lower quartile.</p> <p>Conversely, the upper quartile separates the total group of income recipients into one group numbering 75 per cent with incomes lower than the upper quartile and one group numbering 25 per cent with incomes greater than this upper quartile.</p>
Quartile breakdown	When income recipients have been divided in accordance with income sizes, the proportion of total income accounted for by each quarter group of all income recipients is calculated.

Quotients	<p>Quotients within population statistics:</p> <p><i>Age specific:</i> Number of live births per year born to mothers within a given age group per 1,000 women within the relevant age group.</p> <p>The quotients within the five-year age groups are calculated as simple averages of the quotients for individual one-year age groups of women within the reproductive age bracket (15-49 years), thus removing the effects of shifts from year to year in the age distribution of women within individual five-year groups.</p> <p><i>General:</i> Number of live births per 1,000 women within their reproductive period, i.e. aged 15-49 years.</p> <p><i>Summary:</i> Number of live births per 1,000 residents.</p>
Raw material price index	Is a sub-index of the wholesale-price index which illustrates trends in prices relating to imported, unprocessed raw materials and fuels.
Real property	Independently registered property, consisting of land and buildings.
Real-property valuation	The main regulation of this Act stipulates that such valuation shall extend to all real property in Denmark.
Recognised religious denominations	Religious denominations which are outside of the National Church, but whose religious ceremonies have legal validity, as well as religious denominations outside of the National Church which have legal authority to conduct marriage ceremonies.
Recycling	"Recycling" comprises reuse of waste in its original form and waste recovery; e.g. recycling of used bottles after rinsing and cleansing.
Refugees	<p>Persons who have been granted residence permits in accordance with the regulations under the Aliens Act which pertain to refugees.</p> <p>This group also includes persons who have been granted a residence permit for humanitarian reasons.</p>
Regional archives	The National Archives receives materials from the central offices of the central government, while the four regional archives receives materials from local offices as well as from local government.
Registered ships	Privately or publicly owned ships of at least 20 GT, except ships owned by the naval forces.
Registered partnership	Registered partnership denotes marriage-like relations between two persons of the same sex.
Reinsurance company	A company in which insurance companies can spread the risks involved in their insurance company by reinsuring their insurance contracts.
Remuneration	The concept remuneration is the concept that is the nearest to what is understood by most employees to be hourly earnings.
Rent	<p>The amount which may be legally claimed from tenants.</p> <p>Rent does not include heating contributions, just as any rent subsidies have not been deducted.</p>

Rent subsidies	Denote subsidies for housing expenses which may be granted upon application, depending on household composition, income, and housing. Rent subsidies may be granted to tenants in leased accommodation and to communal dwellings where the tenant is not a pensioner, whereas pensioners' rent subsidies may be granted to recipients of social pension benefits who live in leased accommodation, co-operative dwellings, owner-occupied dwellings, or communal dwellings.
Reported violations	A violation which has been reported to the police or which has come to the knowledge of the police in other ways.
Reproduction rate	Net: the number of daughters that would be born alive to 1,000 women during the reproduction period of their lives (ages 15-49) if they were to give birth and die in accordance with given levels of fertility and mortality.
Research libraries	All libraries which are mainly financed through public-sector funding and which are not public libraries or school libraries, nor associated with the public-library sector.
Residential or commercial units	A residential unit or a commercial unit within a building is defined as a room or several interconnected rooms with other, associated rooms which are used as a residence or for commercial purposes, possibly for both. A separate access point is required: from street level, through a garden, or via common hallways or stairs. It is vital that the unit in question can be considered an independent address in accordance with the above requirements on independent access.
Salaried employees	Employees with a fixed monthly salary.
Sales of goods and services	Invoiced sales of goods and services manufactured, processed, or assembled by the relevant enterprise, as well as goods which the enterprise has let others manufacture from materials supplied by them.
Sales of own products	Invoiced sales of goods manufactured, processed, or assembled by the relevant enterprise, as well as goods which the enterprise has let others manufacture from materials supplied by them.
SDR	Special Drawing Rights within the IMF. SDRs constitute an international method of payment and can be used for payments internally between central banks and between central banks and the IMF.
Sea transport	A category within statistics on the balance of payments. Earnings from sea transport are partly from Danish shipping companies' ships engaged in international transport, less carriage of merchandise from foreign countries to Denmark, and partly disbursements in Denmark by foreign carriers, e.g. port disbursements, shipbrokers, etc. Expenditure on sea transport includes Danish shipping agencies' expenditure at foreign ports and expenditure on sea transport/freight on imports carried by foreign shipping companies.
Share-price index	Is used to assess general trends within the share market. The share-price index shows value changes in capital placed in a share portfolio which reflects the overall composition of listed shares.
Short-cycle higher education	Comprises courses of up to 2 years of education after upper secondary school education or vocational upper secondary school. Examples of short-cycle higher education are real estate agents, computer specialists and policemen.

Simple detention	Also known as lenient imprisonment: deprivation of liberty for a period of 7 days to 6 months. Persons serving a sentence of simple detention have special rights in comparison to those serving a sentence of imprisonment.
Single-family houses	Comprise farmhouses and detached, undetached, or semi-detached one-family houses.
Singles	<p>An adult person who does not form part of a couple. A single person under the age of 25 years must not be a child living at home. See "Child living at home".</p> <p>The family tables used in income statistics also include children who do not live with their parents and who were 15 years or more at the end of the year in the "singles" group.</p>
SITC	Standard International Trade Classification, prepared by the UN.
SO₂	See <i>Sulphur dioxide</i>
Social and health services	This main group comprises various services aimed at individuals and offered to households and private individuals. Social and health services include education, national health services, social security, various welfare services, housing and local environments, and cultural, recreational, and religious services.
Social assistance for children and youths	Social assistance under the Social Services Act for children and young people in special-needs families. This includes relocation of the child with or without consent from its parents as well as certain preventive measures
Social benefits in kind	This concept includes health-insurance services and aids which the general government sector purchases on the market and allocates to households in the form of full or partial payment to market producers for supplying specific products to households.
Socio-economic status	<p>Breakdown of the population in accordance with labour-market attachment, i.e. classification into the following categories: self-employed, assisting spouses, employees, unemployed persons, persons temporarily outside the labour force (leave from unemployment and various labour-market measures which do not involve wages), retirement, pensioners, and others outside the labour force (cash-benefit claimants who are not available to the labour market, students, children, young adults, etc.).</p> <p>Employees may be allocated into sub-groups in accordance with skill levels. These skill levels may have been obtained through formal education or through training and hands-on practice.</p>
Special legislation, offences against	Offences which do not fall within the scope of the Danish Penal Code, e.g. offences against the Road Traffic Act, the Euphoricants Act, the Firearms Act, and legislation on taxation.
Standard contribution margin	The standard contribution margin of an activity equals the standard production value less the standard size of the variable costs/expenditure directly linked to this activity.
State-subsidised theatres	In addition to the Royal Theatre and the regional theatres, this group comprises the theatres which are subsidised by the Danish Theatrical Council in accordance with the Act on theatrical enterprises.

Subsidies	Comprise all current transfers from the public sector to enterprises which carry out production for the market. The total subsidies are distributed to quasi-government operations and private enterprises. These subsidies are divided into product subsidies, i.e. subsidies which are awarded in proportion with the goods produced, and other production subsidies. It should be mentioned that compensation for operating losses in quasi-government corporations are classified as product subsidies.
Suckling cows	Cows which are normally not used for milk production, but which are used for suckling calves instead. Cows kept for suckling are used when breeding cattle for meat production.
Sulphur dioxide	Is a toxic gas created as a by-product from incineration of e.g. coal and oil. Sulphur dioxide is spread by the wind and contributes to acidification of the environment.
Supplementary pension	Is granted to employees and self-employed persons aged 60-64 years (before 2006: 16-66) where certain conditions on period of residence in Denmark and working conditions are met. Working hours must be reduced to 12-30 hours per week. Supplementary pensions are calculated on the basis of daily-benefit rates and cannot exceed 82 per cent of the income lost as a result of the reduction in working hours.
Supply	Manufacturing sales of own production plus imports minus exports.
Suspended dust particles	Denotes particles which are capable of remaining suspended in air. In certain situations, suspended dust particles are defined as particles with diameters of less than 10 µm. In other cases, such particles are defined as particles created/collected in connection with specific procedures and may include particles larger than 10 µm.
Suspended imprisonment	Is a conviction whereby a person is not imprisoned unless the person in question within a period of probation commits new criminal offences or violates terms stipulated by the court.
Taxation assessment	An "estimate" is a taxation unit where one person constitutes one estimate and one person, whereas a married couple constitutes one estimate and two persons. The reason that married couples constitute only one estimate is that married couples are subject to joint taxation in Greenland; i.e. married couples file only one income tax return. The taxable income is calculated as the annual income, i.e. the total number of taxable days divided by 365.
Taxes and duties	In the statistics on public finances, taxes and duties are defined as compulsory transfers to the central government without any link between payment and acquisition of services. In the general statistics, taxes and duties may be broken down by type of tax and national account group. Placing taxes and duties in different parts of the national accounts constitutes an attempt to illustrate the manner in which different taxes and duties affect the national economy. Taxes and duties are divided into production and import taxes, current income and property taxes, capital taxes, fines, compulsory fees, and compulsory contributions to social-security schemes. When classifying taxes and duties according to type, only the tax base is taken into account.
Terms of trade	Are the ratio of the index of unit values for exports to the index of unit values for imports, expressed in per cent.
Time charter	Income from rental of ships.

Tonnage	Denotes ship capacity. One measurement used for tonnage is the gross tonnage.
Tonne kilometres	Unit of transport; i.e. one tonne of goods carried one kilometre.
Total fertility rate	Number of children that would be born alive to 1,000 women during the reproductive period of their lives (ages 15 through 49), if all 1,000 women lived to be 50 years old, and if at each age they experienced the given year's age-specific fertility rates.
Total income	The data featured in the consumption survey is obtained through comparisons of various sources of data. As a result, it has been possible to present broader income concepts in this survey than those featured in the general income statistics based on registered information. Thus, the total income statistics of the consumption survey also include income from moonlighting, various winnings, etc. Any enterprise expenditure has been deducted from the incomes of self-employed persons.
Trade balance	The value of exports less the value of imports
Trade journals	Periodical publications mainly aimed at target groups with common interests in terms of industry or finances, etc. These publications are funded by membership fees, subscriptions, and possibly advertising.
Trade unions	Associations of employees and unemployed persons who share the same profession/education and/or the same type of work. The objective of these associations is to promote their members' common interests. Most employees' vocational organisations are members of a main organisation (e.g. LO - the Danish Federation of Trade Unions, FTF - the Danish Confederation of Salaried and Civil Servants' Organisations, or AC - the Danish Confederation of Professional Associations), while a minor number of employee organisations are independent from the main organisations.
Traffic accidents	<p>Accidents occurring on a public road, square, etc., in connection with traffic where at least one of the parties involved in the accident was driving a vehicle.</p> <p>As regards casualties, traffic-accident statistics include all deaths caused by traffic accidents which occur within 30 days of the accident. The statistics on injuries include all other persons injured in traffic accidents according to police information</p>
Traffic performance	Number of kilometres travelled
Train kilometres	Unit of transport, i.e. one train transported one kilometre.
Tramp trade	Denotes maritime traffic with ships which are not used for line service
Transfer income	Includes cash benefits under the Act on active social policies, etc., unemployment benefits, sickness benefits, public pension benefits, early retirement benefits, leave benefits, student grants, etc. Income in the form of interest is not included in the scope of transfer income.
Transit/transfer air traffic	Denotes intermediate landings. Transit indicates that the journey continues on the same plane. Transfer indicates a change of aircraft.
Transport performance	A calculation measured in tonne-km of the goods transported by Danish lorries. It takes into account the weight of the goods and the kilometres transported. One tonne-kilometer equals one tonne goods transported one kilometre.

Travel	Within statistics on the balance of payments, "travel" denotes earnings from non-residents travelling or staying in Denmark, and costs from Danish residents travelling or staying abroad, as well as income and expenditure from cross-border shopping.
Treasury bills	Securities issued by the central government with a maturity of 3 or 6 months. Treasury bills have no nominal interest rate; however, the effective interest rate is calculated as the difference between the price at the time of purchase and the principal amount. Treasury bills are mainly sold to banks.
Treasury notes	Central-government securities with a maturity of less than two years.
Turnover	Income generated from sales of products and services which concern the main activities of an enterprise. Turnover has been calculated less any discounts and does not include taxes, etc., which are directly associated with sales. This concept also includes work which has been carried out at one's own expense and booked as assets, e.g. construction of own machines.
Turnover, etc.	Turnover and other income from operation.
Type of farming	Within agricultural statistics, the production systems of farms are characterised by the proportions of various types of farming within the total standard contribution margin of the relevant farm.
Type of ownership	Enterprises with limited liability, etc.: limited company (A/S), private limited company (ApS), limited partnership (AmbA). Enterprises with unlimited liability: sole proprietorships, other types of partnerships. Other owners include the State, local authorities, funds, associations, and independent institutions.
Unclassified functions, expenditure by	Within public finances, this main group mainly includes interest payments and other costs related to general government debt. Payment of interest on debt is a sign that previous expenditure has been financed by taking out loans, rather than by means of current taxes. Such expenditure is not connected to current activities, and thus cannot be classified as belonging within any one particular function.
Unemployed	<p>A person is classified as being unemployed if, during the reference period, they do not have a job but are available to the labour market and are actively looking for employment. The statistics of registered unemployed (CRAM) are, as far as possible, prepared in accordance with this definition.</p> <p>Within CRAM, individual unemployment is calculated on the basis of the number of hours of unemployment during the week, whereas the number of unemployed persons within RAS is calculated as those persons who were fully unemployed during the last week of November according to CRAM.</p> <p>The concepts "persons having experienced unemployment" and "average number of unemployed" are examples of some of the central concepts used.</p>
Unemployment insurance fund	<p>An association, recognised by the Danish State, of wage-earning/salaried employees or of self-employed persons who have formed an association with the purpose of securing financial aid in the event of unemployment.</p> <p>In order to be state-authorised, such funds must meet a number of requirements; e.g., since 1 January 1985 such funds must have at least 5,000 members, a fact which has entailed a number of mergers of smaller funds, etc.</p>

Unemployment rates in per cent	<p>Unemployment rates in per cent are calculated for the group of persons who are members of an unemployment insurance fund and for the total group of registered unemployed persons, i.e. unemployed insured persons plus unemployed uninsured persons. Both calculations are carried out for the 16-64 age (before 2006: 16-66) bracket and do not include persons receiving early-retirement benefits or transitional benefits.</p> <p>The unemployment rate in per cent for registered unemployed persons is calculated by comparing the average number of unemployed persons to the workforce (RAS).</p> <p>The unemployment rate in per cent for insured persons is calculated by dividing the average number of unemployed insured persons at the end of the period with the number of insured persons at the end of the period.</p>
Unit-value index, the	Indicates changes in the price of imported and exported goods.
Urban area	An urban area comprises at least 200 inhabitants in a built-up area with distances of no more than 200 m between houses unless such distances are caused by public areas/facilities, sports venues, business facilities, etc.
User	Within agricultural statistics, the "user" of an agricultural holding denotes the person in whose name and at whose expense the relevant holding is run.
Value	Value is calculated for each commodity classification as invoiced sales ex factory, excluding VAT.
Vehicle kilometre	One vehicle moved one kilometre.
Vehicle stock	Comprises all vehicles which bear number plates (active vehicles) at the time of calculation.
Vocational education and training	Comprises vocational basic courses and practical training and main courses. These courses provide participants with vocational qualifications, this does not, however, apply to the basic course alone. Examples of vocational education and training are bricklayers, carpenters and electricians. The courses are divided into practical training at the workplace and school attendance.
Voluntary contribution to social security schemes	Signifies contributions which entitle contributors to receive public social security benefits. The voluntary aspect denotes that these contributions fall outside the scope of taxation. Voluntary schemes include contributions to voluntary unemployment insurance, etc., and voluntary contributions to the labour-market supplementary pension scheme (ATP). Such contributions are mainly made by self-employed individuals who have joined this scheme of their own volition.
Vocational upper secondary school	Provides students with qualifications for further education and higher commercial examination (hbx) and higher technical examination (htx).
