

Bilag 5. Særlige variabelgrupperinger

I dette bilag listes særlige grupperinger af variabler i ADAM.

De to første lister giver en komplet fortegnelse over henholdsvis endogene og eksogene variabler.

Dernæst følger en liste med det sæt af centrale eksogene variabler, som brugeren af modellen selv må tage stilling til ved fremskrivninger. De øvrige eksogene variabler bliver fremskrevet automatisk i ADAMs databank.

Endelig findes en listning af de relationer, for hvilke der i simulationsprogrammet er sørget for mulighed for via eksogenisering at indlægge en målværdi for den endogene variabel. Denne liste falder i tre dele. Første del af listen, A, indeholder den endogene variabel, samt J-ledstypen. Herefter kan brugeren selv slutte sig til navnet på dummy, målvariabel og J-led, ud fra følgende regel, idet det antages, at den endogene variabel hedder y , og at J-ledstypen er $J_:$:

Dummy: dy
Målvariabel: Zy
J-led: Jy

Anden del af listen, B, er identisk i opbygning med A, dog er navnene for dummy, målvariabel og J-led her:

Dummy: dy
Målvariabel: yx
J-led: Jy

I sidste del af listen, C, er det af pga. nomenklaturen, der i forhold til det ovenstående er uregelmæssig, valgt at liste både endogen variabel, målvariabel, dummy og J-led.

Endogene variabler
