

**Documentation of statistics for
Research Education 2013**

1 Introduction

The aim of the statistics on PhD-students is to show the volume of PhD-education. Furthermore it gives information on the progress of the education and the subjects of the project. Data are comparable since mid-eighties which is as long the PhD education has existed in Denmark.

2 Statistical presentation

The statistics gives information on numbers of PhD-students and numbers of PhD-graduates at institutions approved to offer PhD-educations in Denmark. The statistics gives information on the progress of the education, under here schemes and special arrangements, periods of leave, and study periods spent abroad. The statistics also gives information on the subjects of the project and on sources of financing.

2.1 Data description

The statistics gives information on numbers of PhD-students and numbers of PhD-graduates at institutions approved to offer PhD-educations in Denmark.

The statistics gives information on the progress of the education, under here schemes and special arrangements, periods of leave, and study periods spent abroad.

The statistics also gives information on the subjects of the project and on sources of financing.

2.2 Classification system

The information of main field of study is primarily based on the students place in the University's institutional structure, i.e. based on information of Faculty supplemented with Institute

It is classified in 6 main fields:

1. Natural science
2. Engineering and Technology
3. Medical science
4. Agricultural science
5. Social science
6. Humanities, Theology

2.3 Sector coverage

The education sector.

2.4 Statistical concepts and definitions

PhD-student: a person enrolled at a university following a PhD-scheme

PhD-graduates: The student is awarded the PhD-degree by the university where the dissertation was assessed

2.5 Statistical unit

The unit of the statistics is a PhD-student enrolled at an institution approved to offer a PhD-degree. If a student change institution during the reference year the person will be counted twice in the statistics. But this only happen very seldom.

If a student stop the education but shortly afterwards continue the project at the same institution the two periods will be added and the person will only be counted once in the statistics.

Is a dissertation examined at the university but the student do not follow the education scheme for PhD-education (section 15, subsection 2,3) only selected data is reported in these cases.

2.6 Statistical population

The statistics gives information on PhD-educations taken at Danish institutions approved to offer PhD-educations. Persons of Danish origin taken a PhD-education abroad is not included Persons of foreign origin taken a PhD-education at an Danish institution is included, even if they do not have address in Denmark.

2.7 Reference area

The statistics gives information on PhD-educations taken at Danish institutions approved to offer PhD-educations. I.e. Universities but also other institutions can be approved, i.e. schools of architecture. Education taken abroad is not covered.

2.8 Time coverage

The statistics is published yearly In Statbank Denmark. First year published is 1996.

2.9 Base period

Not relevant for these statistics.

2.10 Unit of measure

Education course per institution, PhD graduates

2.11 Reference period

Reference period is the calender year, 1. January - 31. December

2.12 Frequency of dissemination

The statistics is published once a year

2.13 Legal acts and other agreements

The data collection is warranted according to Act on Statistics Denmark, section 8, subsection 3.

2.14 Cost and burden

Is not calculated for respondents in the public sector.

2.15 Comment

No further documentation is available. Please contact Statistics Denmark for further information.

3 Statistical processing

The statistics is based on reports from all Danish institutions approved to offer PhD-educations. The data collection covers the total population. The reported data from each respondent is examined carefully. The examination is concentrated on missing data for each respondent. It is also checked if consistent information are reported for each student. Data reported from a university is furthermore compared to data for previous time periods.

In case of missing data or unexpected trends the respondent is contacted for verification of the reported data.

3.1 Source data

The statistics is based on reports from all Danish institutions approved to offer PhD-educations. The data collection covers the total population.

3.2 Frequency of data collection

Data is collected yearly.

3.3 Data collection

Data is collected yearly from education institutes approved to offer PhD-educations and Statistics Denmark receive data in excel-format. From the 2013-statistics some of the respondents will use system-to-system-format.

3.4 Data validation

The reported data is examined carefully. The examination is concentrated on missing data for each respondent. It is also checked if consistent information are reported for each student. Data reported from a university is furthermore compared to data for previous time periods at the University and also compared to data for other universities in the same main field and in the current reference period.

In case of missing data or unexpected trends the respondent is contacted for verification of the reported data.

3.5 Data compilation

The reported data is examined carefully. The examination is concentrated on missing data for each respondent. It is also checked if consistent information are reported for each student. Data reported from a university is furthermore compared to data for previous time periods at the University and also compared to data for other universities in the same main field and in the current reference period.

In case of missing data or unexpected trends the respondent is contacted for verification of the reported data.

3.6 Adjustment

No correction of data is made except what is mentioned under data validation and data compilation.

4 Relevance

It is the general political intension to increase the number of persons who complete a PhD-degree and statistics on PhD-education is therefore in focus.

1-2 times a year the "Kontaktudvalg for Uddannelse" meets and here user-representatives from selected ministries, Labour market organizations, and NGOs in the Education sector have the opportunity of commenting the statistics. Furthermore there is a yearly seminar with the universities, where they gives Statistics Denmark feedback on data quality and publishing.

4.1 User Needs

It is the general political intension to increase the number of persons who complete a PhD-degree and statistics on PhD-education is therefore in focus.

Typical users: Ministries, Universities, Public service, Business organizations, Media and Researchers.

Please note that PhD-degrees completed abroad is not covered by the statistics.

4.2 User Satisfaction

1-2 times a year the "Kontaktudvalg for Uddannelse" meets and here user-representatives from selected ministries, Labour market organizations, and NGOs in the Education sector have the opportunity of commenting the statistics. Furthermore there is a yearly seminar with the universities, where they gives Statistics Denmark feedback on data quality and publishing.

4.3 Data completeness rate

Not relevant for these statistics.

5 Accuracy and reliability

In general the accuracy is very high. All universities and other Institutions approved to offer PhD-educations reports data. Concerning the central units: PhD-students and PhD-graduates, the quality is considered as being very good as the corrections-procedures are very thoroughly. Concerning the information on Main field the quality is considered as good, but since it is based on the students institutional setting and the Faculty structure is under reconstruction these years the accuracy of this information can be affected in a few cases.

5.1 Overall accuracy

In general the accuracy is very high. All Universities and other Institutions approved to offer PhD-educations reports data. Please note that the classical doctorate degree are not covered by these statistics.

5.2 Sampling error

Not relevant for these statistics.

5.3 Non-sampling error

Coverage: Concerning number of PhD-students the statistics covers the target population. Concerning number of PhD-graduates please note that the statistics covers degrees taken at Danish Universities, while degrees taken at Universities abroad by people of Danish origin in most cases are not included.

**Measurement errors:* Concerning the central units: PhD-students and PhD-graduates the quality is considered as being very good as the corrections-procedures are very thorough. Concerning the information on Main field of the research project the quality is considered as good but since it is based on the students institutional setting and the Faculty structure is under reconstruction these years the accuracy of this information can be affected in a few cases.

The students and the information on the main variables are checked very carefully, and on the whole only few cases of "missing data" does not.

5.4 Quality management

Statistics Denmark follows the recommendations on organisation and management of quality given in the Code of Practice for European Statistics (CoP) and the implementation guidelines given in the Quality Assurance Framework of the European Statistical System (QAF). A Working Group on Quality and a central quality assurance function have been established to continuously carry through control of products and processes.

5.5 Quality assurance

Statistics Denmark follows the principles in the Code of Practice for European Statistics (CoP) and uses the Quality Assurance Framework of the European Statistical System (QAF) for the implementation of the principles. This involves continuous decentralized and central control of products and processes based on documentation following international standards. The central quality assurance function reports to the Working Group on Quality. Reports include suggestions for improvement that are assessed, decided and subsequently implemented.

5.6 Quality assessment

Accuracy: In general the accuracy is very high. All universities and other Institutions approved to offer PhD-educations reports data.

Reliability: Concerning number of PhD-students the statistics covers the target population. Concerning number of PhD-graduates please note that the statistics covers degrees taken at Danish Universities, while degrees taken by people living in Denmark at Universities abroad in many cases are not included.

Concerning the central units: PhD-students and PhD-graduates the quality is considered as being very good as the corrections-procedures are very thoroughly. Concerning the information on Main field the quality is considered as good, but since it is based on the students institutional setting and the Faculty structure is under reconstruction these years the accuracy of this information can be affected in a few cases.

The students and the information on the main variables are checked very carefully, and on the whole "missing data" does not occur.

Comparability: Comparability over time for the main variables is good. Though there has been institutional changes for the main fields, which create a minor data breache in 2012. This is due to changes in the Faculty and Institute structure, some of the big universities has carries out. Some recoding has been done to ensure that the variable main field are consistent up till 2011. From 2012 changes could not be avoided especially for Agriculture and Veterinary science.

Comparability to international statistics on number of PhD-students are considered to be very good. Concerning international comparability of the education level of the population, countries using surveys have the possibility of including persons, who have obtained the PhD-degree abroad. These group is only partly included in the Danish statistics on attained education used for international comparison. since the statistics on PhD-degrees for this purpose is supplemented with information on education taken abroad for persons immigrated in the years up till 2006.

5.7 Data revision - policy

Statistics Denmark revises published figures in accordance with the [Revision Policy for Statistics Denmark](#). The common procedures and principles of the Revision Policy are for some statistics supplemented by a specific revision practice.

5.8 Data revision practice

It is possible for the universities to sent supplementary information referring to former reference periods. For 2012 close to 1 pct of the data reported was corrections concerning previous reference periods. The corrections concerning the previous year will be included in the next publication. Other corrections will be included at the next big data revision.

6 Timeliness and punctuality

The statistics is published within one year after the reference year. Data collection and data processing is under revision. It is therefore expected that the production time will be shortened in the comming years.

6.1 Timeliness and time lag - final results

- The 2013 statistics was published at 8. December 2014
- The 2012 statistics was published at 11. December 2013
- The 2011 statistics was published at 13. June 2012
- The 2010 statistics was published at 16. June 2011
- The 2009 statistics was published at 28. June 2010
- The 2008 statistics was published at 3. July 2009

6.2 Punctuality

The statistics is published within a year after the reference year. The precise data can vary and is therefore announced separately each year. The statistics is published on time.

7 Comparability

Comparability over time for the main variables is good. The statistics also contains information on education schemes, research topics, financing, stays abroad and employment. the content of these variables has changed over the years, but have been consistent since 2009.

International comparability of statistics on number of PhD-students are considered to be very good. Concerning international comparability of statistics on the education level of the population, countries using surveys have the possibility of including persons, who have obtained the PhD-degree abroad. These group is in most cases not included in the Danish statistics.

7.1 Comparability - geographical

Comparability to international statistics on number of PhD-students are considered to be very good.

Concerning international comparability of the education level of the population, countries using surveys have the possibility of including persons, who have obtained the PhD-degree abroad. These group is only partly included in the Danish statistics on attained education used for international comparison. since the statistics on PhD-degrees for this purpose is supplemented with information on education taken abroad for persons immigrated in the years up till 2006.

7.2 Comparability over time

There is comparable data series from 1996. The definition of the population, number of PhD students and PhD graduates has been consistent over the years. Comparability on main areas is on a whole good but are influenced by the changes in the institutional structure. This is due to the changes in faculty structure made by some of the big universities as well as fusions by some of the institutions. In these periods of change recoding has been made so that the original structure is shown by the statistics.

The statistics also contains information on education schemes, research topics, financing, stays abroad and employment. The content of these variables has changed over the years, but have been consistent since 2009.

7.3 Coherence - cross domain

Universities Denmark publish yearly data on number of PhD-students, new entrants and number of obtained PhD-degrees. The comparability is very good. The small discrepancies are due to the fact that the data collections take place at different times, and the data is updated in different degrees.

7.4 Coherence - internal

Not relevant for these statistics.

8 Accessibility and clarity

- Please find further information on the homepage:
<https://www.dst.dk/da/Statistik/emner/fuldtidsuddannelser/forskeruddannelser.aspx?tab=nog>
- The newest data is published in "Nyt fra Danmarks Statistik"
- The main figures are published in Statbank Denmark
- In the database "Norbal" there is PhD-data for the Nordic countries and Baltikum
- The Statistical Yearbook contains data on the PhD-education and more detailed analysis is published yearly in "Innovation and Research".
- Taylor made statistics is available via Statistics Denmark's Customers Center
- Mikrodata is accessible via Statistics Denmark's Researcher's Center

8.1 Release calendar

The publication date appears in the release calendar. The date is confirmed in the weeks before.

8.2 Release calendar access

The Release Calendar can be accessed on our English website: [Release Calendar](#).

8.3 User access

Statistics are always published at 8:00 a.m. at the day announced in the release calendar. No one outside of Statistics Denmark can access the statistics before they are published.

8.4 News release

Newest available data is published in "NYT fra Danmarks Statistik", [PhD-education](#).

8.5 Publications

Innovation and Research, [Innovation and Research](#). The yearbook shows the trend in enrollment of PhD-students and in the subjects of the PhD-projects. Furthermore tables show the employment of the PhD-graduates, i.e. by sector.

The PhD-statistics is also used as input in the General Statistics on Education Activity and Education Attainment of the Danish Population.

8.6 On-line database

Main results are published in Statbank Denmark, [PhD-education in Statbank Denmark](#).

8.7 Micro-data access

Micro-data is available for Researchers etc. via the Division of Research Services in Statistics Denmark. For further information, see: [Research Services in Statistics Denmark](#).

8.8 Other

The Customers Center in Statistics Denmark has access to micro data and offer detailed tables and tables combining PhD-data with other data in Statistics Denmark.

For further information: [Customers Center in Statistics Denmark](#).

8.9 Confidentiality - policy

[Confidentially-policy in Statistics Denmark](#).

8.10 Confidentiality - data treatment

The politics of confidentiality for Statistics Denmark is followed. For further information, see [Confidentially-policy in Statistics Denmark](#).

8.11 Documentation on methodology

For further information, see [Uddannelsesmanualen](#).

8.12 Quality documentation

Results from the quality evaluation of products and selected processes are available in detail for each statistics and in summary reports for the Working Group on Quality.

9 Contact

The administrative placement of these statistics placed in the section Population and Education. The person responsible is Lone Solbjerghøj, tel. +45 39 17 37 65, e-mail: los@dst.dk

9.1 Contact organisation

Statistics Denmark

9.2 Contact organisation unit

Population and Education, Social Statistics

9.3 Contact name

Lone Solbjerghøj

9.4 Contact person function

Responsible for the statistics
