

Statistic: Small business activities

Period: Yearly

Contact: Questions about the content of the declaration: www.dst.dk/en/sos

This study deals with companies' use of e.g. digital solutions social media, e-sales, artificial intelligence and respondent burden, etc. It is important that the company answers the questions regardless of whether the company has the activities or technologies questioned.

The vast majority of questions can be answered with 'yes' or 'no' and the response time is not expected to exceed 10 minutes.

Access and use of the internet

How many persons employed have access to the internet for business purposes?

Please indicate an estimate of the percentage of the total number of persons employed who have access to the internet for business purposes

pct.

Does the enterprise use any type of fixed line connection to the internet?

e.g. ADSL, SDSL, VDSL, fiber optics technology (FTTP), cable technology, etc.

O Ja

O Nej

	2
If "Yes":	
What is the maximum contracted download speed of the The marketed download speed.	e fastest fixed internet connection of the enterprise?
Less than 10 Mbit/s	
At least 10 Mbit/s but less than 30 Mbit/s	
At least 30 Mbit/s but less than 100 Mbit/s	
At least 100 Mbit/s but less than 500 Mbit/s	
At least 500 Mbit/s but less than 1 Gbit/s	
At least 1 Gbit/s	
ICT specialists and skills	
Does the enterprise employ ICT specialists? ICT specialists are employees for whom ICT is the mai ICT systems or applications. Yes No	n job. For example, to develop, operate or maintain
If "Yes": Did your enterprise provide any type of training to deduring 2023?	evelop ICT related skills of the persons employed,
a) Training for ICT specialists Yes No	
If "Yes" or "No" to "Does the enterprise employ ICT speci	alists?":
b) Training for other persons employed Yes	
No No	

Web sales of goods or services

Web sales covers orders, bookings and reservations via oline store, app, web forms or extranet.

E.g. online ordering of food or goods for pickup or delivery, booking or time reservation at workshop, hairdresser etc.

	hairdresser etc. Payment and delivery do not have to be made electronically. Orders written in e-mail are not counted as web sales.			
[During 2023, did the enterprise have web sales of goods or services via:			
	a) The enterprise's websites or apps? (including extranets) Yes No			
5	b) E-commerce marketplace websites or apps used by several enterprises for trading goods or services? E.g. e-Bookers, Booking, hotels.com, eBay, Amazon, Amazon Business, Alibaba Yes No			

ICT Security Measures and Data Protection

ICT security means measures, controls and procedures applied on ICT systems in order to ensure integrity, authenticity, availability and confidentiality of data and systems.

Does your enterprise make persons employed aware of their obligations in ICT security related issues in the following ways? a) Voluntary training or internally available information E.g. information on the intranet Yes No b) Compulsory training courses or viewing compulsory material Yes No c) By contract E.g. contract of employment Yes No Does the enterprise have document(s) on measures, practices or procedures on ICT security? Documents on ICT security and confidentiality of data cover employee training in ICT use, ICT security measures, the evaluation of ICT security measures, plans for updating ICT security documents, etc. Yes No

Including backup to the cloud Yes No 9) Network access control E.g. management of user rights in enterprise's network Yes No No 1) VPN (Virtual Private Network) Virtual Private Network extends a private network across a public network to enable secure exchange of da over public network Yes No 1) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (1954's) or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No 1) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No No 1) ICT security tests Reproducial assessment Periodical assessment of probability and consequences of ICT security incidents Yes No No 1) ICT security tests Reproducing penetration tests, testing security alert system, review of security measures, testion of backup systems		a separate location
No	Including backup t	:o the cloud
g) Network access control E.g. management of user rights in enterprise's network Yes No No No No No No No No I) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (158 s) or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution healtided in the operating system of personal computers and routers. Yes No No No K) ICT risk assessment Periodical analysis after ICT security incidents Yes No No No No I) ICT security tests No No No No No No No No No N	Yes	
E.g. management of user rights in enterprise's network Yes No No No VPN (Virtual Private Network) Virtual Private Network extends a private network across a public network to enable secure exchange of da over public network Yes No No i) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (\$50.5) or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No i) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No No i) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No i) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes	O No	
No	g) Network access	control
h) VPN (Virtual Private Network) Virtual Private Network extends a private network across a public network to enable secure exchange of da over public network Yes No 1) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (\$500 or devices' behavior, network traffic.) Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No k) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No 1) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes	E.g. management	of user rights in enterprise's network
h) VPN (Virtual Private Network) Virtual Private Network extends a private network across a public network to enable secure exchange of da over public network Yes No 1) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (see or or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No i) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No No i) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No I) ICT security tests E.g. performing benefication tests, testing security alert system, review of security measures, testiof backup systems Yes	Yes	
Virtual Private Network extends a private network across a public network to enable secure exchange of da over public network Ves No i) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (users) or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No i) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No No i) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No i) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes	O No	
over public network Yes No No i) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (See s) or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No k) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No No l) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes		
i) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors users or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No i) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No No i) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes Yes		
i) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors user's or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution helided in the operating system of personal computers and routers. Yes No No j) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No k) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No 1) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes		
i) ICT security monitoring system used to detect suspicious activity E.g. intrusion detection or prevention systems that monitors (154's) or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No j) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No k) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No l) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes	Yes	
E.g. intrusion detection or prevention systems that monitors (Sees or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No j) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No k) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No No l) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes	○ No	
E.g. intrusion detection or prevention systems that monitors (Sees or devices' behavior, network traffic. Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Yes No No j) Maintaining log files E.g. that enable analysis after ICT security incidents Yes No k) ICT risk assessment Periodical assessment of probability and consequences of ICT security incidents Yes No No l) ICT security tests E.g. performing penetration tests, testing security alert system, review of security measures, testiof backup systems Yes	i) ICT cocurity mo	nitoring system used to detect suspicious activity
Please exclude antivirus software and default firewall solution included in the operating system of personal computers and routers. Artificial Intelligence

Artificial intelligence refers to systems that use technologies such as:

- Text mining
- Image analysis
- Image generation
- Text generation
- Speech recognition
- Natural language generation
- Machine learning (deep learning)
- Process automation

Artificial intelligence systems can be purely software based, e.g. chatbots and business virtual assistants based on natural language processing, face recognition systems based on computer vision or speech recognition system, machine translation software, data analysis based on machine learning, etc. or embedded in devices, e.g. autonomous robots for warehouse automation or production assembly works,

	autonomous drones for production, surveillance or parcel handling, etc.
[Does the enterprise use any of the following Artificial Intelligence technologi
	a) AI technologies performing analysis of text (text mining) Yes No
	 AI technologies converting spoken language into machine-readable formatispeech recognition)
	○ Yes ○ No
	AI technologies generating written or spoken language (natural language processing) Yes No

If "Yes" to at least one of the questions above:

Does the enterprise use Artificial Intelligence technologies for any of the following purposes	oses?
--	-------

a) Use of AI for marketing or sales

E.g.

- chatbots based on natural language processing for customer support
- customer profiling, price optimisation, personalised marketing offers, market analysis based on machine learning
- Autonomous robots for order processing

0	Yes	
0	No	

b) Use of AI for production or service processes

E.g.

- predictive maintenance or process optimization based on machine learning
- tools to classify products or find defects in products based on computer vision
- autonomous drones for production surveillance, security or inspection tasks
- assembly works performed by autonomous robots

0	Yes
	No

c) Use of AI for organisation of business administration processes or management

E.g.

- Business virtual assistants based on machine learning and/or natural language processing, e.g. for document drafting
- Data analysis data or strategic decision making, e.g. risk assessment, based on machine learning
- Planning or business forecasting based on machine learning
- Human resources management based on machine learning or natural language processing, e.g. candidates pre-selection screening, employee profiling or performance analysis

12
 d) Use of AI for logistics E.g. Autonomous robots for pick-and-pack solutions in warehouses for parcel shipping, tracing, distribution or sorting
Route optimization based on machine learning
Yes
○ No
e) Use of AI for ICT security E.g.
Face recognition based on computer vision for authentication of ICT users Detection and prevention of cyber-attacks
○ Yes
○ No
f) Use of AI for accounting, controlling or finance management E.g.
 Machine learning to analyze data that helps to make financial decisions Invoice processing based on machine learning
Machine learning or natural language processing for bookkeeping documents
Yes
○ No
g) Use of AI for research and development (R&D) or innovation activity (excluding research on AI)
E.g.
 Analysis of data for conducting research, solving research problems developing a new or significantly improved product/service based on machine learning
Yes
○ No

Respondent burden

Danish companies have a duty to report to many different authorities – for example, VAT registration, maternity refunds or the contents of a product the company has produced. The authorities use the reports to carry out their regulatory tasks. However, companies often perceive reports as a burden they would like to avoid. In the following, please answer questions about the reports your company handles.

On average, how many hours per week do you spend r Incl. preparing data.	eporting to the public sector
a) Less than 1 hour per week	
b) Approx. 1-2 hours per week	
C) Approx. 3-4 hours per week	
d) Approx. 5 hours per week or more	
e) Do not know	
Which reports do you find particularly resource-intension. Here we are particularly interested in hearing which are consuming to answer – such as employee data, climate	eas are experienced as particularly time-
Who typically makes your reports?	
a) We do this ourselves - most often without the us of digital solutions	e
b) We do it ourselves - most often using digital solutions (e.g. a software program)	
c) We most often buy this from an accountant	
d) Do not know
