

# Prices and consumption

- Consumer prices
  - Business prices
    - Cost indices
  - Consumption
  - Real property
    - Cars

## Consumer prices

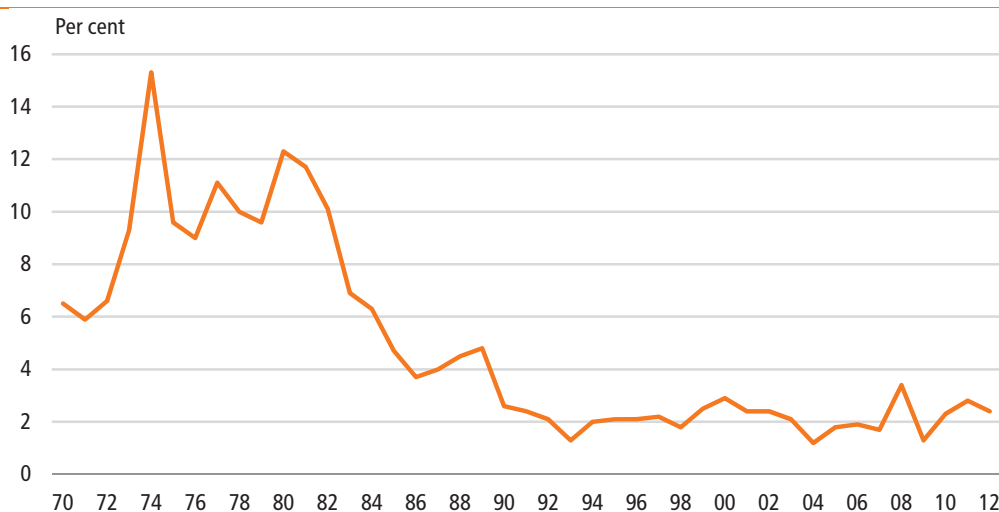

### Inflation peaked in 1974

In 1974, inflation peaked with an annual change in the consumer price index of approximately 15 per cent. In 1980, the annual change in the consumer price index was approximately 12 per cent. The low inflation since the 90's should among other things be viewed in the light of the monetary policy and the fixed exchange rate against the Euro.

### Consumer prices reflect the inflation

The consumer price index shows the trend of the prices typically charged to consumers for goods and services. Real prices, including VAT and duties charged to consumers, are used for estimating price trends. The trend in the consumer price index reflects a country's rate of inflation.

**Figure 1** Inflation

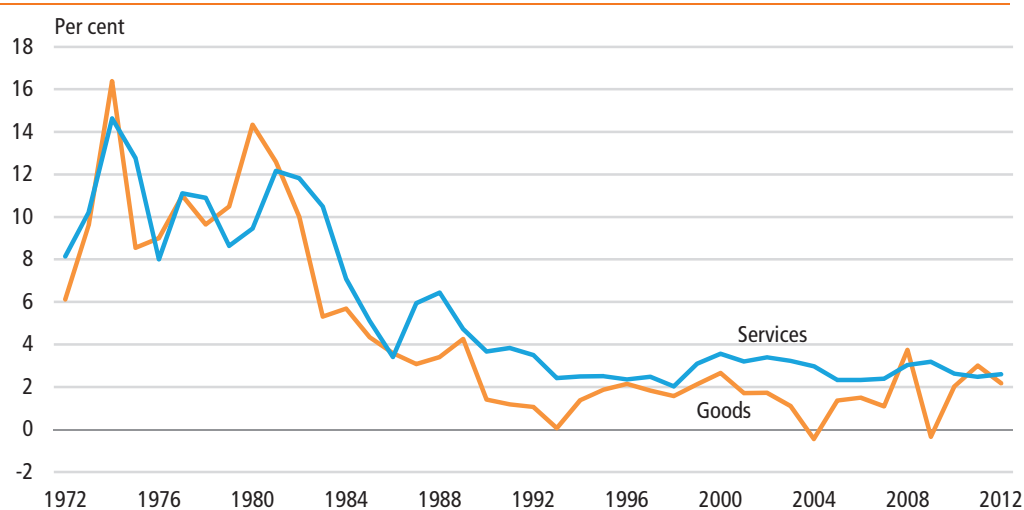

[www.statbank.dk/pris9](http://www.statbank.dk/pris9)

### Sub-indices for goods and services

The annual changes in the consumer price index can be divided into goods and services. Similar to the overall consumer price index, these indices reflect the high levels of inflation from the early 1970s to the early 1980s. The increases in the services index were greater than those in the goods index during the periods before and after the oil crises.

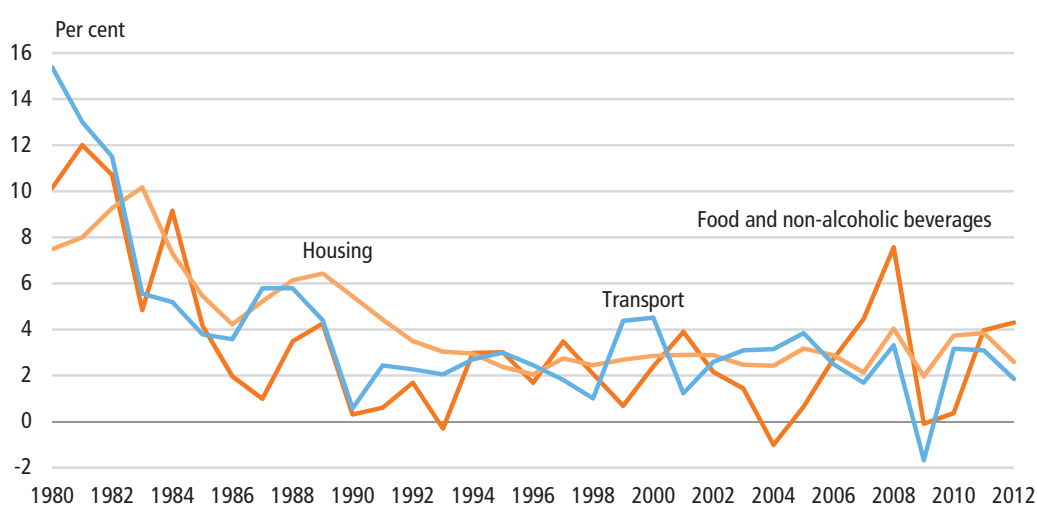

Since the end of the 1980s, the services index has been higher than the goods index in almost all years. This may be partly attributed to the fact that the services index to a greater extent than the goods index is influenced by developments in wages and salaries. In 2008 the prices on goods increased more than the prices on services, which to a great extent can be attributed to high price increases on food during that year. During 2011 the prices on goods also increased more than the prices on services. This can to a large extent be attributed to big price increases on gasoline and other energy products. In 2012 the prices on services once again increased more than prices on goods.

**Figure 2 Annual changes in price indices**

[www.statbank.dk/pris6](http://www.statbank.dk/pris6)

### The housing index, the food index, and the transport index

Generally, the sub-indices – the housing index, the food index, and the transport index, show the same overall trend as the consumer price index, i.e. greatest change during the period around the two oil crises.

**Figure 3 Annual changes in selected sub-indices**

[www.statbank.dk/pris6](http://www.statbank.dk/pris6)

From 2002 to 2006, the growth rate on food prices has been lower than that of housing and transport. In 2004, food prices were decreasing, while they in the following years have increased more and more until 2008. In 2008 the food prices increased 7.6 per cent, while they were more or less stable in 2009 and 2010. In 2011 food prices increased again, as a result of rising coffee prices and increasing taxes on butter and edible oils.

Food prices increased by 4.3 per cent in 2012 mainly due to higher prices on butter and edible oils, sugar and meat. Housing increased by 2.6 per cent in 2012 while transport increased by 1.9 per cent.

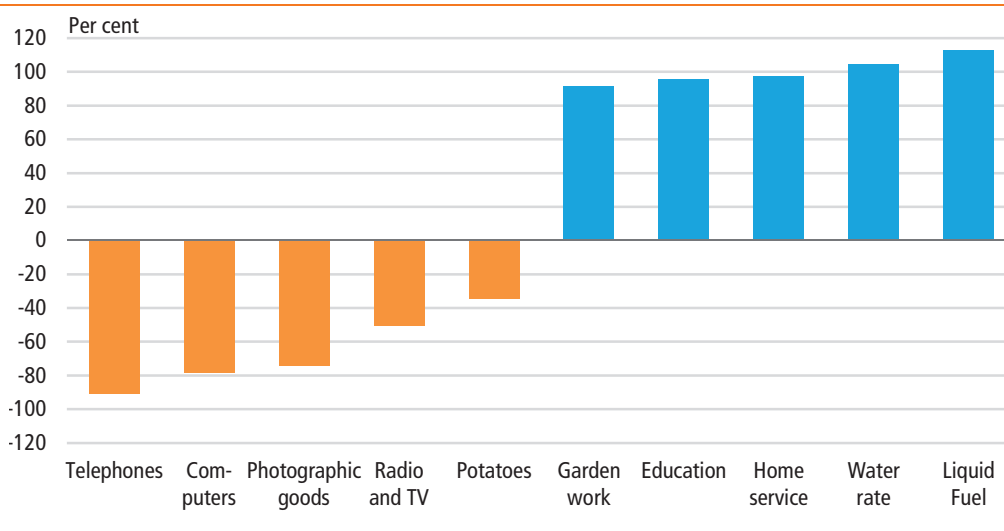

### Greatest changes in consumer prices since 2000

In the figure below is shown the commodity and service groups that account for the greatest falls or increases in prices from January 2000 to January 2013. During the period, there was a fall of 91 per cent for telephones. Especially, mobile phones have been instrumental in reducing prices. There is also a sharp fall in computers (-79 per cent) and photographic equipment (-75 per cent). During the period, radio and TV accounts for a fall of 50 per cent, while there was a fall in prices for potatoes of 34 per cent in the period.

Since 2000 prices for heating oil has risen 113 per cent while water rates have increased by 105 per cent. Education has risen by 96 per cent in the period, due to, among other things, a reduction in subsidies allocated to evening schools. During the period garden work, etc. has increased by 92 per cent. Home service (e.g. cleaning activities and window cleaning) has increased by 97 per cent. The rise in the prices for garden work and home service is mainly due to the abolition of subsidies allocated to home service.

Generally speaking, goods with a highly technological content account for the highest falls in prices since 2000, while services and energy products account for the highest increases.

**Figure 4** Percentage change in consumer prices. January 2000 - January 2013

### International comparison of price trends

In the second half of 2007, the inflation in the United States, the EU, Denmark and Japan rose considerably, mainly due to globally rising food and energy prices. This increase slowed down by the end of 2008 and the inflation rates were moderate in 2009. United States and Japan have even experienced deflation for several

months in 2009. In 2010-2011, inflation rates were again increasing mostly due to rising energy prices. During 2012 the inflation rates were decreasing due to among other things reduced price increases for energy products.

**Figure 5 Inflation in EU, Denmark, USA and Japan**

## Business prices

### Greater fluctuations in the price index for domestic supply

Importers' real purchase prices, excluding VAT and duties, as well as producers' real sales prices, excluding VAT and duties, are used as the basis for estimating the price index for domestic supply.

Generally, the price index for domestic supply fluctuates more than the consumer price index. This is mainly due to the fact that the price index for domestic supply includes a number of raw materials for which there are relatively great price fluctuations, and which are not comprised by the consumer price index.

**Figure 6 Price index for domestic supply**

[www.statistikbanken.dk/pris10](http://www.statistikbanken.dk/pris10)

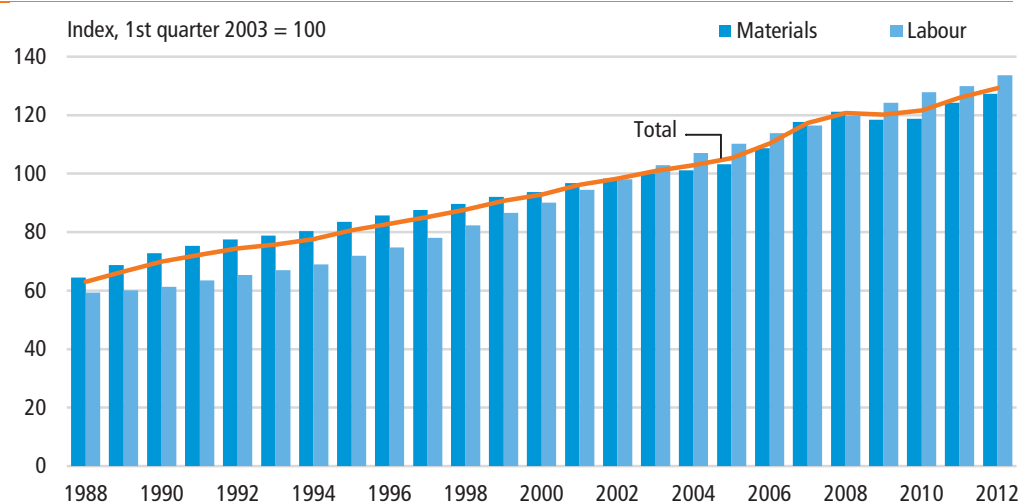

The huge oil price increases during these periods affected the price index for domestic supply to a greater degree than the other indices due to the greater weight of fuels. The repeated devaluation of the Danish krone at the end of the 1970s was also instrumental in increasing import prices, which also have greater weight in the price index for domestic supply.

## Cost indices

### Increase in total building costs

In 2003, the previous regulation price indices for residential buildings were replaced by the present construction cost indices for residential buildings. Besides the general indices for residential building, indices are now calculated for one-family houses and multi-family houses as well. Total construction costs have increased by 104.9 per cent from 1988 to 2012, i.e. they have more than doubled. During this period, the costs of labour have increased by 125.3 per cent and the costs of materials by 97.4 per cent.

**Figure 7** Regulating index for residential construction

Note: The figures from 1987 up to and including 2002 have been drawn from the *regulating price index for residential construction, total*, while the figures from 2003 onwards have been drawn from *construction cost index for residential construction*.

www.statbank.dk/byg5

### Construction cost indices for civil engineering projects

The construction cost indices for civil engineering show trends in prices for work performed by different contractors in civil engineering projects, e.i. earthwork, asphalt work, concrete structures, iron and steel structures and total costs for construction of roads.

**Figur 8** Construction cost indices for civil engineering projects

[www.statbank.dk/byg6](http://www.statbank.dk/byg6)

## Consumption

### How is income spent?

The household budget survey carried out by Statistics Denmark, which involves a study of private household finances, makes it possible to see how total household income is spent.

According to the somewhat wider concept of income in the household budget survey, an average household had a total income of DKK 566,639 in 2010. However, a large part of this income was not at disposal of the household due to income tax, etc., and any interest payable on household debts (including mortgages) – DKK 192,314. The amount left to average households was DKK 374,325.

The main part of this amount was spent on consumption – DKK 305,596 – while DKK 65,159 was used for savings (including pension savings and savings tied up in real property). The remaining DKK 8,884 was spent on membership fees, gifts, and charity, while households got DKK 5,314 from capital pensions etc. capital pensions are defined as a negative saving.

**Figure 9** How income is spent in selected households – per cent of total income. 2010

### Employees households use nearly half of their total income on consumption

In 2010, self-employed and employee households constituted the groups where consumption accounted for the smallest percentage of the total income.

Pensioner households and other households made up of persons not economically active (social security recipients, students, etc.) were characterized by spending a considerably greater percentage of their income on consumption than self-employed and employee households.

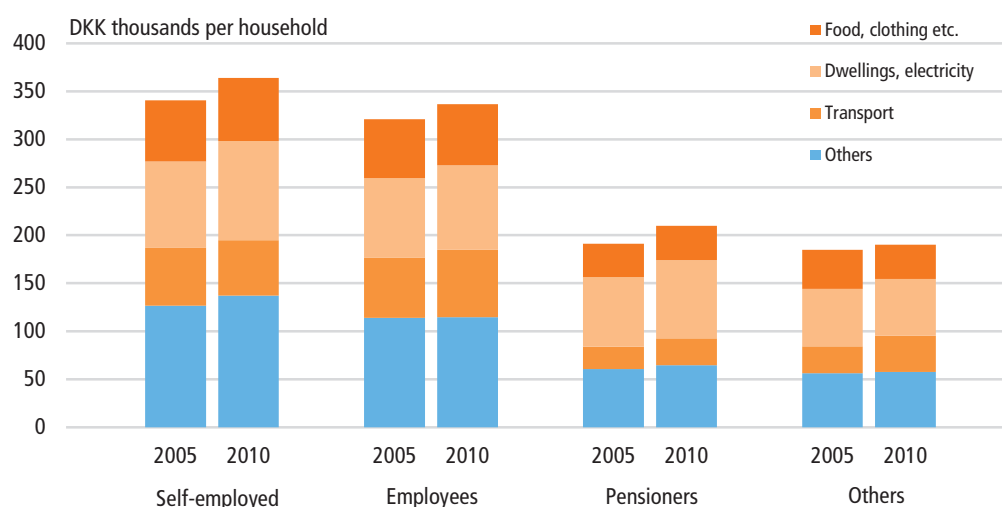

### Great differences in households

When assessing these differences, it should be noted that households vary greatly in nature. Households in which the main breadwinner is an employee or self-employed are significantly larger than other households. These types of households are home to respectively 2.5 and 2.4 persons per household on average, whereas the corresponding figure for pensioners' households is 1.4 persons and for other households 1.7 persons per household. Total income is significantly lower in households not economically active: The average income of pensioners' households is DKK 335,454, while that of households with other persons not economically active is DKK 265,838.

### Pensioners have the highest increase in consumer spending

From 2005 to 2010, pensioners have accounted for the highest increase in consumer spending (10 per cent), followed by self-employed (7 per cent) and employee households (5 per cent), while the consumer spending of households not economically active has only increased by 3 per cent. The varying developments for the different groups can largely be attributed to the varying developments of the groups as a whole and to a lesser extent to the possible changes in the composition of each group. The statistical data are compiled in fixed prices, implying that inflation is taken into account.

**Figure 10 Consumer spending. Fixed 2005 prices**

### Most money was spent on housing

Housing constituted the largest single consumption item as housing consumption accounted for 23 per cent of total consumption in 2010, i.e. rent in rented accommodation and imputed rent in owner-occupied housing, plus maintenance, etc., not including an additional 8 per cent for heating and electricity.

17 per cent was spent on transport, etc., while food, beverages, and tobacco accounted for 14 per cent. Other goods and services, which includes expenditure on education and child care, restaurants and hotels, various services, insurance, etc. accounted for 14 per cent. Recreational equipment and entertainment accounted for 11 per cent, while clothing and footwear accounted for only 5 per cent.

**Figure 11**

### Consumption by goods/services. 2010

[www.statbank.dk/fu5](http://www.statbank.dk/fu5)

### Danes spend less on food and more on housing

The composition of consumption has undergone major changes over a long period of time. Since 1980, the consumption of food, beverages and tobacco has fallen from 24 per cent of the total consumption of private households to 15 per cent in 2011.

Conversely, expenditure on housing, heating, and electricity has increased from 25.6 per cent in 1981 to 28.9 per cent in 2011. The consumption of clothing and footwear has fallen from 5.5 per cent in 1980 to 4.2 per cent in 2011, while expenditure on transport and communications has dropped slightly over the last 15 years from 13.3 per cent to 14.2 per cent.

**Figure 12** The share of selected consumption items of total consumption

[www.statbank.dk/nat05](http://www.statbank.dk/nat05)

### We drink less and less beer

In 2010, the Danes' consumption of beer was the lowest over the 10 years in which the consumption has been estimated. The consumption reached 453 litres of beer, which is 4.9 per cent lower than the year before. In 2000, we drank 614 million litres of beer, and the consumption of beer has thus decreased by 26 per cent over the last 10 years.

By contrast, there is a small increase in the consumption of wine. In 2010, we drank 192 litres of wine, which is 1.3 per cent higher than in the previous year – a trend seen in the last 4 years. The consumption of wine is the highest since 2000. The consumption group wine covers the more traditional types of wine as well as cider products, where the consumption has risen sharply in recent years.

### 113 fewer alcoholic drinks annually in 10 years

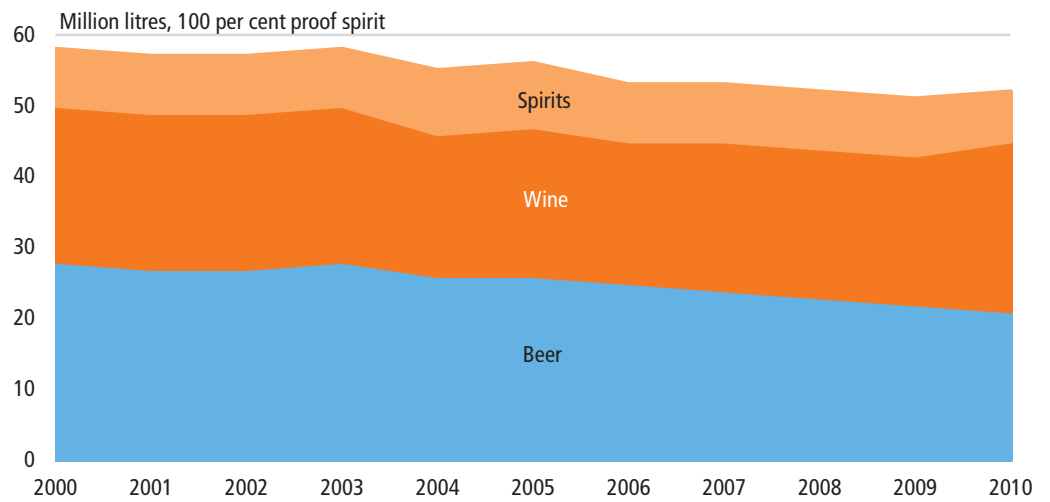

The consumption of alcohol converted to pure alcohol was 11.3 litres per person over 14 years in 2010. This is 1.7 litres less compared to 10 years earlier, when consumption reached 13.0 litres. This is an increase of 0.2 litre of alcohol compared to the previous year.

The 11.3 litres of pure alcohol is equivalent to about 14 alcoholic drinks per week or 1.5 cl pure alcohol. Compared to the last 10 years when each inhabitant over 14 years drank on average 13.0 litres of pure alcohol, the consumption has been reduced by 113 alcoholic drinks or more than two drinks per week.

The conversion of alcoholic quantities for different types of alcohol into pure alcohol is conducted against the background of an assumption of the average alcohol percentage within each duty group. In 2010, the average alcohol percentage in two duty groups for wine was upgraded. This implies that the comparison of pure alcohol between 2009 and 2010 must be subject to caution.

**Figure 13 Total consumption of dutiable alcohol**

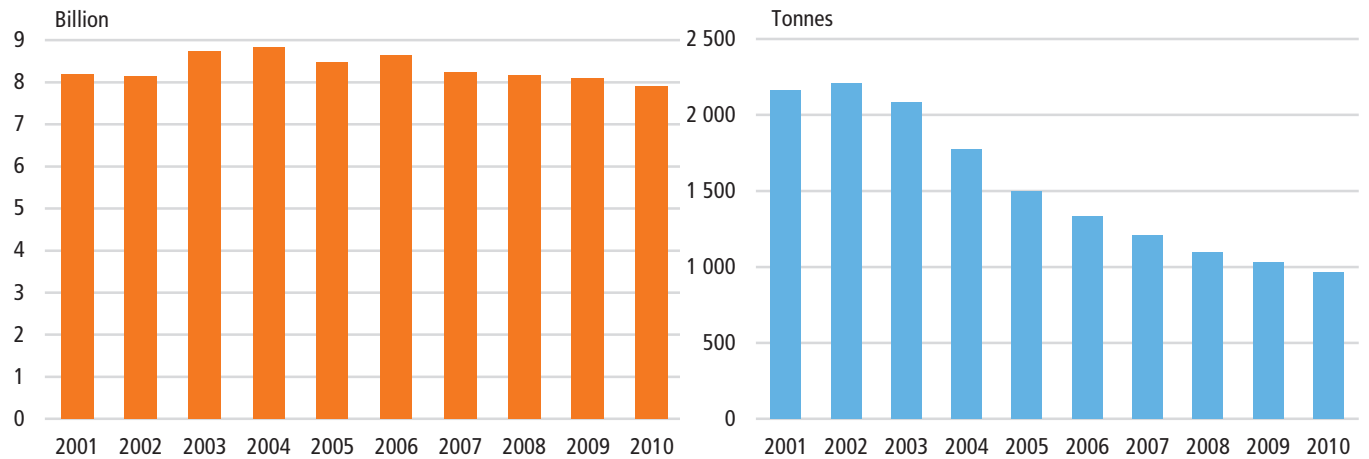

[www.statbank.dk/alko4](http://www.statbank.dk/alko4)

**More than 200 fewer cigarettes in five years**

The consumption of cigarettes, etc. fell in 2010 with about 170 million pieces. This corresponds to every inhabitant over 14 years on average smoked 55 cigarettes fewer than the year before. In the last five years, consumption has fallen by approximately 550 million pieces. This corresponds to every inhabitant over 14 years on average smoked more than 200 cigarettes fewer in 2010 than in 2005.

**Figure 14 Consumption of tobacco**

[www.statbank.dk/alko4](http://www.statbank.dk/alko4)

### Households and the public sector

The household budget survey also calculates the value of the indirect public subsidies that households may be said to receive insofar as they utilize free or cost-reduced services in healthcare, education, and childcare.

On the other hand, part of all household consumption actually constitutes payments to the public sector insofar as such consumption is liable to VAT or other taxes/duties. The net result of such transfers back and forth between individual households and the public sector can be calculated as shown below.

### Household transfers to and from the public sector. 2010

	Age Group					
	All	17-29	30-49	50-59	60-66	67 +
	DKK thousands					
<b>Transfers to the public sector</b>	<b>227</b>	<b>131</b>	<b>299</b>	<b>279</b>	<b>218</b>	<b>130</b>
Income taxes, etc.	158	84	216	203	146	82
VAT, duties, property taxes, etc.	68	47	83	77	72	48
<b>Transfers from the public sector</b>	<b>159</b>	<b>142</b>	<b>170</b>	<b>109</b>	<b>142</b>	<b>202</b>
Transfer income	92	65	65	65	127	157
Selected indirect transfers	67	77	105	44	14	46
<b>Net transfers to the public sector</b>	<b>68</b>	<b>-11</b>	<b>129</b>	<b>170</b>	<b>76</b>	<b>-73</b>
<b>Average household income</b>	<b>567</b>	<b>322</b>	<b>736</b>	<b>700</b>	<b>561</b>	<b>335</b>

Here, households are divided into categories according to the age of the main breadwinner. When assessing these statistics, it should be noted that households in the younger as well as the older categories are relatively small, whereas households in the 30-59 age group are larger, usually comprising two economically active adults.

Income taxes, etc., also include subscriptions to unemployment insurance funds. Income transfers comprise a number of transfer incomes, including old-age pensions, cash benefits, sickness benefits, unemployment benefits, housing/rent benefits, and family allowances.

As mentioned above, *selected indirect transfers* include the most important services offered in healthcare, education, and childcare; subsidies for medical products have not, however, been included for practical reasons.

### Net transfers to the public sector increase with age

It is clear that net transfers from households to the public sector increase with age until the age of 60. From this age onwards, it becomes common to receive early retirement benefits and old-age pension benefits, so for the oldest age group public transfers to households exceed the transfers made from households to the public sector in the form of taxes and duties.

## Real property

### Fall in the number of sales of real property in all regions

Following an increase in the number of sales from 2009 to 2010, there was a fall in the number of real property sales from 2010 to 2011 in all five regions of Denmark. The lowest fall was seen in the Region Hovedstaden, where the total fall reached 12.8 per cent while Region Midtjylland accounted for the greatest fall.

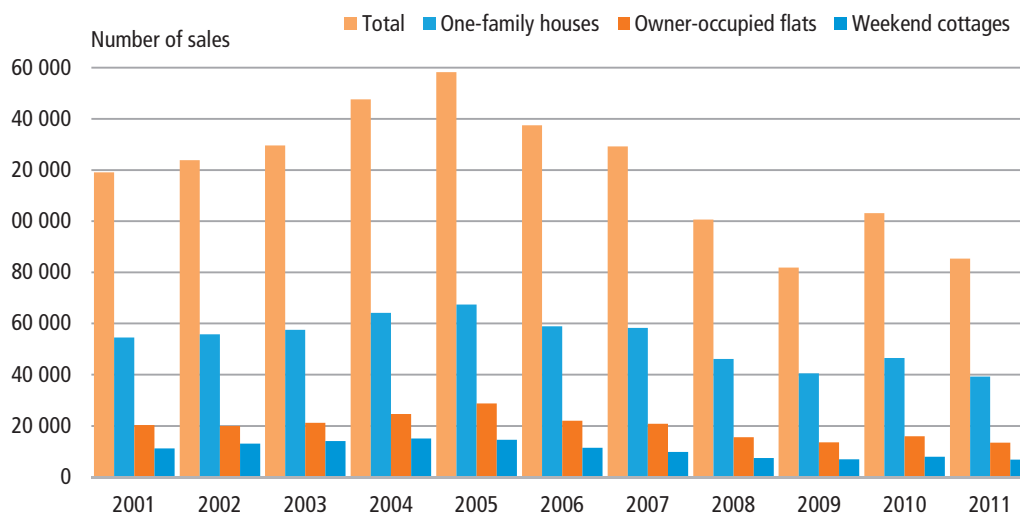

Figure 15 Sales of real property by region

### A fall of 15 pct. in the number of dwellings sold

In 2011 there was a fall in the sales of one-family houses of 15.4 per cent owner-occupied flats of 15.6 per cent and weekend cottages of 14.7 per cent. The total sales of real property in Denmark, including business properties, agriculture and building plots reached 85,388 properties. This is a fall of 17.2 per cent compared to 2010.

Figure 16 Sales of real property by type

### Strong growth in price of dwellings replaced by falling prices

Prices of dwellings increased from the beginning of the 1990s until 2006, when the first indications of price falls began to appear. Prices have been falling until 2009, after which prices in 2010 again shows a slight increase in all property categories.

**Figure 17** Price trends for owner-occupied dwellings

[www.statbank.dk/ejen6](http://www.statbank.dk/ejen6)

### Lowest number of forced sales in 2006

The lowest number of announced forced sales since the first compilation of the statistics in 1979 was in 2006 with a monthly average of 103, while the highest number was recorded in 1990 with 1,695 monthly forced sales. In 2012 the monthly average number of forced sales was 427.

**Figure 18** Forced sales, seasonally corrected

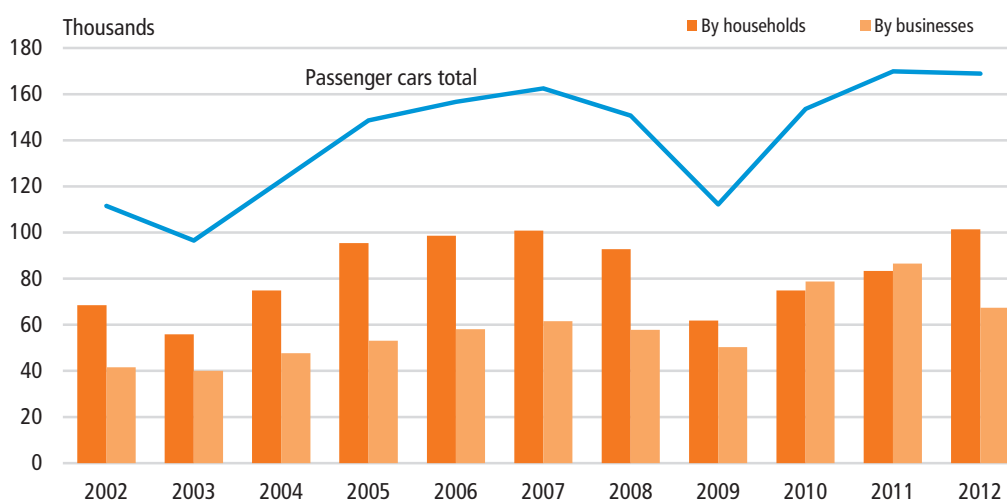

## Cars

### Almost 170,000 new private cars registered

By 169,000 new private cars registered in 2012 the high level of registrations in 2011 continued. As the part registered by industries has been stable at 35-42 per centages in the period 2000-2008, the industries in 2010 and 2011 count for more than 50 per cent of the registrations. In 2012, industry accounted for 40 per cent. This fall can be explained by a decrease in the number of leasing arrangements, and a significant increase in households purchasing small cheap cars.

**Figure 19** New private car registration

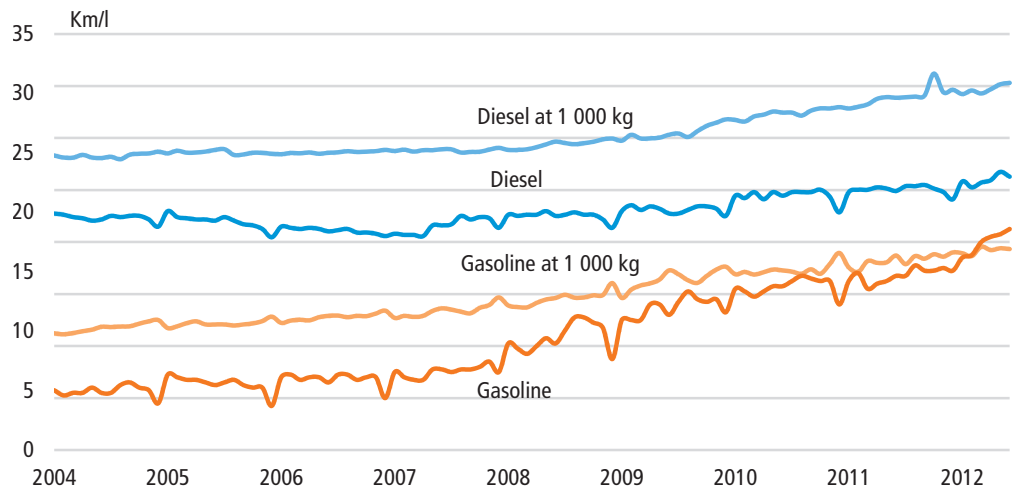

[www.statbank.dk/bil5](http://www.statbank.dk/bil5)

### Increase in energy efficiency

The energy efficiency for petrol- and diesel-powered passenger cars registered in 2011-2012 was on average 20.8 km/l compared to 13.1 km/l for cars registered in 1997-1998. This is equivalent to an increase of 57.9 per cent. For cars purchased by private households, the corresponding figures are 21.0 km/l and 13.4 km/l, while for cars purchased by the industries figures are 20.5 km/l and 12.5 km/l.

**Figure 20** Energy efficiency for new private cars registered
