

## Strengthening the capabilities of the Department of Statistics in Jordan

### Results and conclusions

## Conclusions and recommendations

- To put the compiled data on agriculture and fishery for the National Account into the SUT.
- The EAA can be used in the future to make a sector analysis giving an excellent overview of the agricultural sector.
- Link from the EAA to the SUT since the product values and intermediate consumption data needed for the SUT is in the EAA.

## The purposes of the mission were:

- To present satellite accounts for agriculture.
- Data requirements, methodologies as well as compilation techniques.
- To introduce the DoS staff to how satellite accounts for agriculture can be used as an input to the Supply and Use tables (SUT).
- Special focus on changes needed in order to comply with the ESA10/SNA08

## Assessment and results

- Introduction to satellite accounts in the ESA2010 chapter 22 and a special focus on agriculture, hereunder a special sector account for agriculture FADN.
- Introduction to EAA and all its components.
- Discussion of the data needs to compile an EAA together with the data requirements for input to the SUT.
