

The Onlinesystem New ordering and administration system

Research Service

Background

- Researchers:
 - Ordering of data for research projects can be improved
 - Information is available on DST website but spread around and parts are only updated manually
 - Not easy for the researcher to get an overview over data, documentation, processes etc.
- Research Unit
 - Overview can be improved
 - No electronic backlog
 - Process can be more unified and automated

→ Make a support system that covers the needs for everyone

Three partial projects

- **Administration system FSE-SYS**

- Keep track of all costumers/researchers
- Supports unified process for administration of institutions, projects and researchers.
- Easy overview – eg who has access to what?
- Internal use
- **In operation! (demonstration later)**

- **Metadatasystem FSE-META**

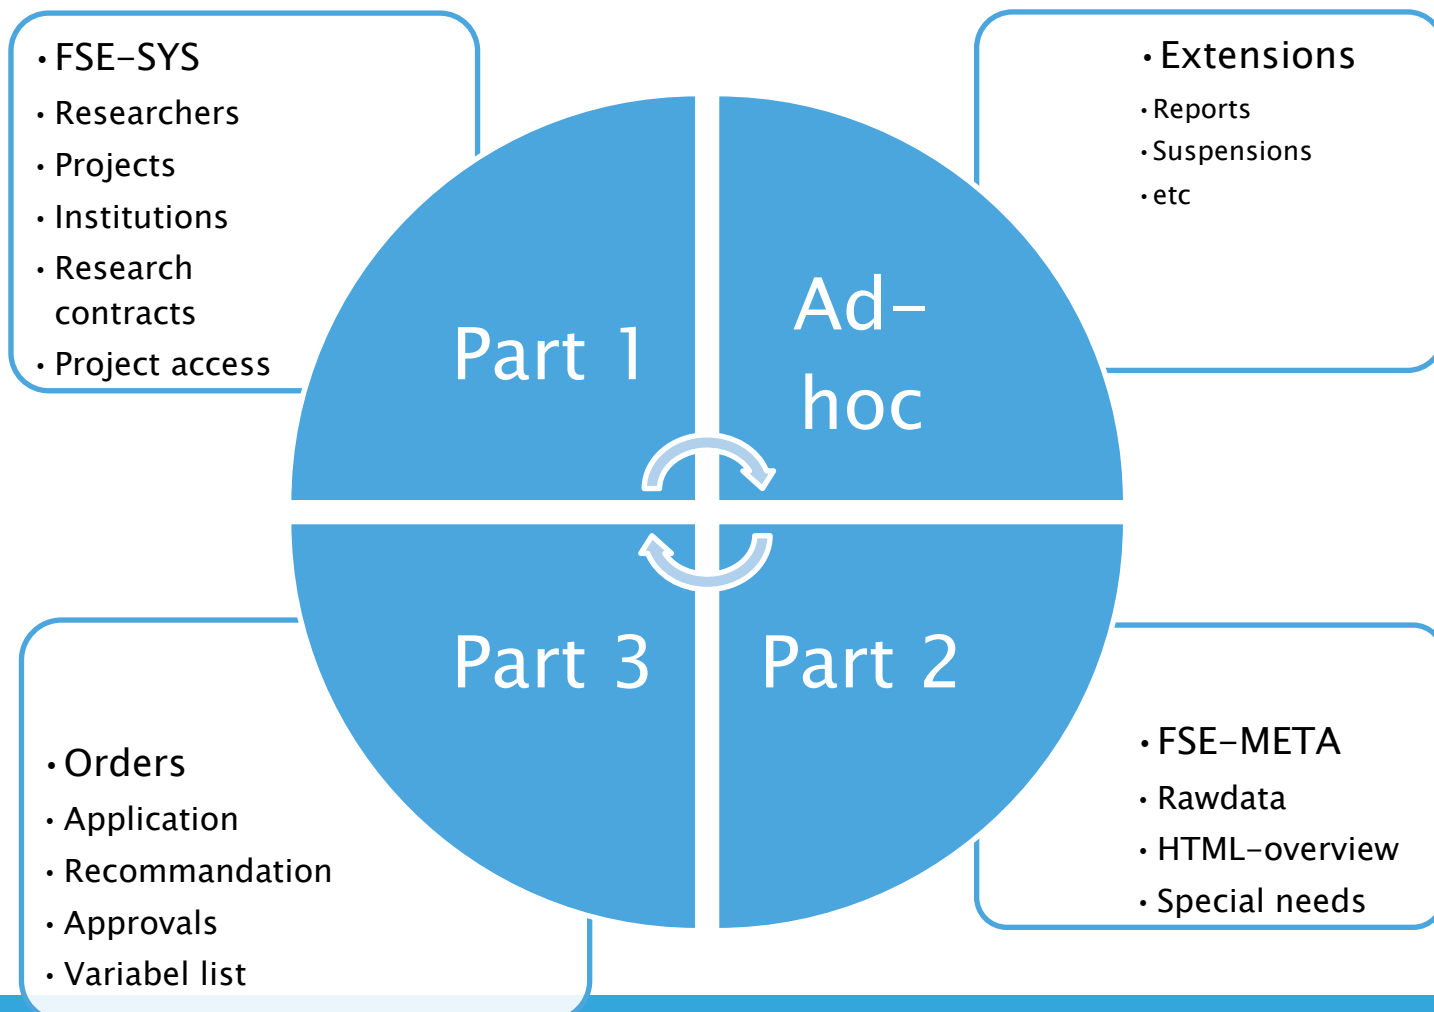

- Database with all variables that are available for researchers.
- Under implementation – in operation 2016

- **Webshop – FSE-Online**

- "Webshop" concept
- Known researchers can order new projects.
- Data available down to variable-level (FSE-META) for ordering
- Implemented in 2017
