**ANNEX 2 FDI DSD V1.7**

**ANNEX 3 BOP, IIP, ITSS AND FDI QUESTIONNAIRES**

## 1. PURPOSE OF THE DOCUMENT

The data published by Eurostat for Balance of Payments, International Investment Position, International Trade in Services and Foreign Direct Investment Statistics are mostly based on the data transmissions by the EU Member States and other European countries. The BOP Vademeum is the reference document for the data transmission addressed to the national compilers. Its main purpose is to specify Eurostat's needs and assist the national compilers in fulfilling them.

The BOP Vademeum reflects requirements laid down in the [Regulation \(EC\) No 184/2005 of the European Parliament and of the Council of 12 January 2005](#) on Community statistics concerning balance of payments, international trade in services and foreign direct investment<sup>1</sup>, as amended by [the Commission Regulation \(EU\) No 555/2012 of 22 June 2012](#)<sup>2</sup> and [Regulation \(EU\) No 2016/1013 of the European Parliament and of the Council of 8 June 2016](#)<sup>3</sup>. Requirements in the Commission Regulation (EU) No 555/2012 for monthly BOP, quarterly BOP and quarterly IIP are identical as in [ECB Guideline ECB/2011/23 of 9 December 2011](#)<sup>4</sup>, as amended by [ECB Guideline ECB/2013/25 of 30 July 2013](#)<sup>5</sup> and [Guideline \(EU\) 2016/231 of the European Central Bank of 26 November 2015](#)<sup>6</sup>. Data on annual international trade in services and foreign direct investment included in the Commission Regulation (EU) No 555/2012 are to be reported only to Eurostat, while data on monthly international reserve assets, monthly revaluations of reserve assets and monthly cross-border shipments of euro banknotes included in ECB Guideline ECB/2011/23 are to be reported only to the ECB.

BOP Vademeum reflects users' interest on the following data sets:

- Balance of payments monthly statistics;
- Balance of payments quarterly statistics;
- International investment position;
- International trade in services and remittances;
- Foreign direct investment flows, income and positions.

To facilitate the access to this document, the BOP Vademeum is available in an electronic format (in MS Word, MS Excel and PDF formats) at: [/CircaBC/ESTAT/bop/Library/sdds\\_bop\\_metadata](#)

Eurostat welcomes and encourages suggestions from users for further improvements to the BOP Vademeum.

All proposals should be sent to the functional e-mail: [estat-bop-vademecum@ec.europa.eu](mailto:estat-bop-vademecum@ec.europa.eu).

<sup>6</sup> Guideline (EU) 2016/231 of the European Central Bank of 26 November 2015 amending Guideline ECB/2011/23 on the statistical reporting requirements of the European Central Bank in the field of external statistics (ECB/2015/39) (OJ L 41, 18.2.2016, p. 28).

## **2. CHANGES FROM THE PREVIOUS VERSION (DECEMBER 2018)**

Our objective is to maintain the stability as much as possible and there are no substantial changes from the previous update. The main ones are as follow:

### **2.1 Changes related to United Kingdom's withdrawal from the European Union**

On 29 October 2019, the European Council decided, in agreement with the United Kingdom, to extend further the two-year period provided for by Article 50(3) of the Treaty on European Union, until 31 January 2020. According to this decision, the withdrawal date of the United Kingdom from the European Union is on 1 February 2020 at 00.00 (CET).

Until the withdrawal date (i.e. at the moment 31 January 2020) Intra EU28 (B5) and Extra EU28 (D5) will remain mandatory counterpart areas for data transmission. Therefore, Intra EU28 (B5) and Extra EU28 (D5) remain mandatory until data transmissions for reference month **January 2020**, due on **16 March 2020** and for reference quarter **2019Q4**, due on **23/25 March 2020**. Afterwards, i.e. starting from data transmissions for **February 2020** and **2020Q1** new aggregates Intra EU27 (without the UK) and Extra EU27 (including with the UK) are going to become obligatory counterpart areas.

For annual international trade in services and foreign direct investment the new EU27 composition will become mandatory starting from reference year 2020, i.e. from data transmission due on 30 September 2021. Data to be reported in 2020 (for reference years until 2019) are still mandatory with the current EU28 composition and voluntary with the new EU27 composition.

New codes for data transmission are already introduced in BOP and FDI DSDs. These are:

- B6 – Intra EU27 (without the UK),
- D6 – Extra EU27 (including with the UK).

In order to ensure the quality of Eurostat's estimates of the new aggregates, Eurostat already requests, on voluntary basis, transmission of the new aggregates (B6 and D6). At the moment both EU28 and EU27 aggregates are disseminated in Eurobase for quarterly BOP, while for monthly BOP only EU28 data are published (EU27 aggregates are calculated but not disseminated). EU28 remains the 'headline' aggregate and is the only one included in quarterly news releases until January 2020. In news release to be published starting from February 2020 both EU28 and EU27 data will be included but EU27 will become the 'headline' aggregate.

[Commission Delegated Regulation \(EU\) 2019/505](#) of 19 December 2018 regulates updated legal requirements, related to the new EU composition. It shall **apply only from the day following that on which the United Kingdom ceases to be a Member State of the European Union**. The Regulation updates Table 6 'Geographical breakdown levels' of Annex I to Regulation (EC) 184/2005 as follows:

- 1) includes the United Kingdom as a separate counterpart country in GEO 4 (currently the United Kingdom is included among "Union Member States outside the euro area"),
- 2) changes the position of entry 'United Kingdom' in GEO 5 and GEO 6 and move it under the geographical aggregate 'Other European Countries'.

Eurostat is preparing itself to face all actual and potential consequences of the UK withdrawal. Eurostat will coordinate its approach across the statistical domains. The current guidelines are based on the assumptions that the withdrawal of the United Kingdom from the EU will take place on 31 January 2020. If the situation changes, Eurostat will inform the BOP WG about the changes and update the guidelines.

The tables below present the EU composition to be requested in 2019 and 2020 on mandatory and voluntary basis.

Monthly BOP:

Code	Aggregates	Reference month				
		Nov'19	Dec'19	Jan'20	Feb'20	Mar'20
B5	EU28	T1				
D5	Extra EU28					
B6	EU27				T1	
D6	Extra EU27				T1	

Quarterly BOP and IIP:

Code	Aggregates	Reference quarter					
		Q3'19	Q4'19	Q1'20	Q2'20	Q3'20	Q4'20
B5	EU28	T2.1,T2.2					
D5	Extra EU28						
B6	EU27	T2.1,T2.2			T2.1,T2.2		
D6	Extra EU27						

Annual ITSS and FDI

Code	Aggregates	Reference year	
		2019	2020
B5	EU28	T3,T4.1,T4.2,T4.3,T5.1,T5.2	
D5	Extra EU28		
B6	EU27	T3,T4.1,T4.2,T4.3,T5.1,T5.2	T3,T4.1,T4.2,T4.3,T5.1,T5.2
D6	Extra EU27		

 Mandatory counterpart areas  
 Voluntary counterpart areas

## 2.2 Other changes

- The data flow **BPM6\_BOP\_A** was introduced to facilitate voluntary BOP and IIP back-data available only with annual frequency. As the use of this data flow has been very limited and it was sometimes confusing for data compilers (e.g. ITSS datasets were transmitted using data flow BPM6\_BOP\_A instead of BPM6\_ITS\_A), Eurostat would like to discontinue BPM6\_BOP\_A data flow in the course of year 2020.
- EFSF (European Financial Stability Facility) will be reclassified from 'Other financial intermediaries, except insurance corporations and pension funds' (S125), resident in Luxembourg and will become a new European institution of the euro area with code 4W and in reference sector 'general government' (S13). Integrity rule for All the European Union Institutions, Organs and Organisms, including ECB, ESM and EFSF will be updated to 4Y=4A+4F+4S+4W. Reclassification will be applicable starting from July 2020 (for monthly BOP), from Q3 of 2020 (for quarterly BOP and IIP) and from 2021 (for annual ITSS and FDI). Additionally, the ESM (European Stability Mechanism) will be reclassified from sector S125 to S13.
- On 5 July 2018 Lithuania became new OECD member country. A new code P5 with the following integrity rule P5 = AT + AU + BE + CA + CH + CL + CZ + DE + DK + EE + ES + FI + FR + GB + GR + LT + LU + LV + HU + IE + IL + IS + IT + JP + KR + MX + NL + NO + NZ + PL + PT + SE + SI + SK + TR + US has been created. It will be requested on **voluntary basis** for annual international trade in services and foreign direct investment data starting from reference year 2019.
- Due to frequent changes in the composition of the member countries of the Organisation of the Petroleum Exporting Countries (OPEC), which hampers data comparison over time, Eurostat decided to discontinue voluntary request for data vis-à-vis this organisation.
- Due to change in country name, name in Appendixes was updated from Macedonia, the Former Yugoslav Republic of to **North Macedonia**.
- New international organisations (codes 1U2, 5Z45, 6A10, 6Z1) were added in Appendix 11 "List of international organisations".

## 4. DATA TRANSMISSION

---

### NOTE

The following measures on data transmission are introduced to ensure a reasonable level of efficiency, security and oversight of data reception and processing at Eurostat. In principle they apply to all data suppliers but they are especially important for **EU Member States, EFTA countries and Candidate Countries**.

## 4.1. TIMETABLE AND REVISION POLICY

According to the provisions of the Commission Regulation (EU) No 555/2012 and ECB Guideline ECB/2011/23 datasets are requested to be reported by the Member States by end of the day for data transmissions with the following timeliness:

- a) Monthly BOP data by the 44<sup>th</sup> calendar day following the end of the reference period;
- b) Quarterly BOP/IIP data by the 82<sup>th</sup> calendar day following the end of the reference period **for Euro Area Member States and by the 85<sup>th</sup> calendar day following the end of the reference period for non-Euro Area countries.** Reporting timetable on the next page indicates these different deadlines.
- c) Annual international trade in services by 9 months after the end of the reference period;
- d) Annual foreign direct investment transactions, income and positions by 9 months after the end of the reference period;
- e) Annual foreign direct investment transactions, income and positions with activity breakdown by 21 months after the end of the reference period.

Actual reporting timetable for the data transmissions from December 2019 until February 2021 is to be found in the table on the next page. Time periods included in the column “Revised/back data” are recommended to be transmitted together with the new observations and **are not mandatory** if data **are not revised for any given time period**. In case of the **longer time span of the revisions**, national compilers are **requested to transmit all revised data to Eurostat** so as to ensure **consistency between data published nationally and by Eurostat**. To reflect recommendations of the CMFB Task Force on European Harmonized Revision Policy second quarter of the year was added to first and third quarters as recommended window for the revisions. Member States are requested to send other revisions or back data, in case of any revisions in national figures, to ensure consistency between national and Eurostat publications.

Eurostat release calendar can be found under <http://ec.europa.eu/eurostat/news/release-calendar>

☛ Please, be aware that any transmission of data before the deadline is very much appreciated.

Deadline	Data flow	Dataset/ questionnaire	Reference period	Revised/back data	Publication (Eurobase/press release)

13 January 2021 – Wednesday	BPM6_BOP_M	MBOP /T1	2020M11	2020M10	19 January 2021 – Tuesday
15 February 2021 – Monday	BPM6_BOP_M	MBOP /T1	2020M12	2020M10-M11	19 February 2021 - Friday

<sup>(1)</sup> Deadline for Euro Area Member States.

<sup>(2)</sup> Deadline for non-Euro Area countries

<sup>(3)</sup> Full consistency between monthly and quarterly data is not required, as while quarterly data are requested on a full accrual basis, best estimates (e.g. partly on a cash basis) are accepted for the monthly BOP. The revision of monthly BOP data is recommended when quarterly data are first reported or revised. Such data are requested only on **voluntary** basis.

<sup>(4)</sup> Revisions for Annual ITSS data should ideally be consistent with all the revisions - even for years prior to 2016 - transmitted for BOP quarterly data on a voluntary basis. The objective is that ITSS data are fully consistent with annualised BOP data.

<sup>(5)</sup> Revised FDI data for reference year 2016 are requested on a voluntary basis (i.e. 2<sup>nd</sup> revision for questionnaire T4.1, T4.2 and T5.1 – Geographical breakdown and 1<sup>st</sup> revision for questionnaire T4.3 and T5.2 - breakdown by activity).

Datasets to be transmitted to both ECB and Eurostat

Datasets to be transmitted only to Eurostat

## 4.2. DATA TRANSMISSION GUIDELINES

### 4.2.1 Which data format?

The transmission format in which data are to be sent to Eurostat in 2020 should be SDMX-ML (versions 2.0 or 2.1) or SDMX-EDI (GESMES/TS). Progressive convergence towards the SDMX-ML format is ongoing and Eurostat intends to **phase-out transmission of data files in GESMES format** as soon as possible. Therefore, all countries that still use it are encouraged to gradually move to transmissions in SDMX-ML format. Eurostat is able to receive both SDMX-EDI and SDMX-ML data files during a period of transition, however, SDMX-EDI format will not be supported by new validation services to be introduced in 2020. This format will not be accepted in the future, although the deadline for phase-out has not yet been set.

IT Working Group is responsible for providing the relevant IT infrastructure and support. Additionally, EDAMIS and validation user group, which reports to the IT Working Group, puts in contact all EDAMIS local coordinators.

For information about the SDMX-ML format, please consult:

[https://sdmx.org/?page\\_id=16](https://sdmx.org/?page_id=16) (SDMX-ML 2.0),

[https://sdmx.org/?page\\_id=5008](https://sdmx.org/?page_id=5008) (SDMX-ML 2.1)

For information about the SDMX-EDI format, please consult: [https://sdmx.org/?page\\_id=5008](https://sdmx.org/?page_id=5008)

In summary, for the time being, data compilers would be able to use one of the three formats below:

- **SDMX-ML compact format version 2.0**
- **SDMX-ML structure specific format version 2.1**
- **SDMX-EDI (GESMES/TS) – to be phased out**

### 4.2.2 Where to send data?

Always to Eurostat's single entry point. It is compulsory to use EDAMIS for all transmissions of regular datasets to Eurostat.

New version of EDAMIS - EDAMIS 4 - is currently being introduced by Eurostat. During the transitional period individual modules of EDAMIS 4 are progressively deployed and some functionality may be available simultaneously in both EDAMIS 3 and EDAMIS 4 for some time.

Data transmissions can be done in two ways:

- ✓ By using the EDAMIS Web Application on your intranet (available in all EU Member States' National Statistical Institutes and National Central Banks).  
EDAMIS Web Application is part of EDAMIS 3 infrastructure. In EDAMIS 4, this component will be replaced by the new ESDEN client or by a standard sFTP client. These new transmission methods are expected to be available since 1 February 2020. EDAMIS Web Application is expected to be discontinued on 30 June 2020 (both dates are subject to change).
- ✓ By using EDAMIS Web Portal. EDAMIS 3 Web Portal has been superseded by EDAMIS 4 Web portal, which provides substantial improvements over its previous version. EDAMIS 4 Web Portal has been providing data transmission functionality since November 2018. EDAMIS 3 Web Portal is expected to be discontinued on 31 January 2020 (subject to change).

EDAMIS 3 Web Portal: <https://webgate.ec.europa.eu/edamis>

EDAMIS 4 Web Portal: <https://webgate.ec.europa.eu/edamis4>

All methods of data transmission allow data files to be encrypted.

- For more information about the migration process and new features of EDAMIS 4, please refer to EDAMIS 4 Migration Info Space:  
<https://webgate.ec.europa.eu/fpfis/wikis/display/EDAMIS4MIG/EDAMIS+4+Migration+Info+Space>
- User guides and instructional videos for EDAMIS 4 are available at:  
<https://webgate.ec.europa.eu/fpfis/wikis/display/EDAMIS4MIG/EDAMIS+4+How+To+Videos>
- Explanations about sending encrypted files to Eurostat can be found on EDAMIS Help Center Website: <https://webgate.ec.europa.eu/edamis/helpcenter/website/tools/ewp/index.htm>

## 4.2.3 How to send data?

The **Balance of Payments Data Structure Definition (BOP DSD)** comprises 16 dimensions and 15 attributes. **Dimensions** are used to uniquely identify a time series and, when joined together, they provide the “time series key”. When defining a time series key using SDMX, a valid code must be assigned to each dimension of the DSD. Codification following the BOP DSD should be used for data transmission of monthly and quarterly BOP, quarterly IIP (including other flows) and annual ITSS.

Two further primary concepts are part of the DSD: i) TIME\_PERIOD, the period to which the measured information refers to (its presentation is a "Date/time stamp" ObservationalTimePeriod); and, ii) OBS\_VALUE, which is a field for reporting the actual value of the observation.

In addition to the above defined dimensions, there are other statistical concepts, which are covered by **attributes**. Attributes provide descriptive and technical metadata. In the BOP DSD they are applicable either at observation or time series level. Attributes are either mandatory or conditional.

BOP Data Structure Definition - V1.12 - May 2019						
Dimensions						
Position	Version	Concept Mnemonic/Identifier	Concept Name	Description	Code List Mnemonic	Code List Name
1	2	EREQ	Frequency	Frequency	CL_FREQ	Frequency code list
2	1.4	ADJUSTMENT	Adjustment indicator	Adjustment indicator	CL_ADJUSTMENT	Adjustment code list
3	1.11	REF_AREA	Reference country or area	Reference country or area	CL_AREA	Area code list
4	1	COUNTERPART_AREA	Counterpart Area	Counterpart Area	CL_AREA	Area code list
5	1.10	REF_SECTOR	Reference sector	Institutional sector in the Reference country or area	CL_SECTOR	Institutional sector code list
6		COUNTERPART_SECTO_R	Counterpart sector	Counterpart institutional sector in the reporting country or area	CL_SECTOR	Institutional sector code list
7	1.1	FLOW_STOCK_ENTRY	Flows and stocks indicator	Flows and stocks indicator	CL_FSENTRY	Flow or stock entry code list
8	1.3	ACCOUNTING_ENTRY	Accounting entries	Types of accounting entries (i.e. credit, debit, balance)	CL_ACCOUNT_ENTRY	Accounting entry code list
9	1.5	INT_ACC_ITEM	International accounts item	Item classification for international accounts statistics	CL_ACCOUNTS_ITEM	Item classification code list
10	1.9	FUNCTIONAL_CAT	Functional category	Classification by functional of the financial investment	CL_FUNCTIONAL_CAT	Functional category code list
11	1.9	INSTR_ASSET	Instrument and assets classification	Breakdown by financial instruments and assets	CL_INSTR_ASSET	Financial instruments and assets classification list
12	1.6	MATURITY	Maturity	Original maturity of financial instrument, combined with remaining maturity	CL_MATURITY	Maturity code list
13	1.13	UNIT_MEASURE	Unit of measure	Unit of measure for reporting the time-series	CL_UNIT	Unit of measure code list
14	1.13	CURRENCY_DENOM	Currency of denomination	Currency of issuance for financial items or invoicing for goods and services	CL_UNIT	Unit of measure code list
15	1.6	VALUATION	Valuation	Price valuation	CL_VALUATION	Valuation code list
16	1.2	COMP_METHOD	Compilation methodology	Identify the compilation methodology of otherwise identical concepts	CL_COMP_METHOD	Compilation methodology code list

Attributes

(1) C/M=Conditional/Mandatory

NB: also the two following primary concepts are part of the DSD:

TIME\_PERIOD, the period to which the measured information refers; its presentation is a "Date/time stamp" ObservationalTimePeriod .

OBS\_VALUE, field for reporting the actual value of the observation.

The BOP and FDI DSDs shares several dimensions and attributes with the National Accounts DSD (NA DSD), as indicated in the BOP DSD table. These dimensions may therefore include codes other than those used for the transmission of BOP, IIP, ITSS and FDI data, as described in Vademecum. Code lists are comprehensive dictionaries that try to cover all possible concepts used in BOP, NA and FDI, independently of whether they are used in actual data transmissions or not.

The full BOP and FDI DSDs are available as Annex 1 and Annex 2 to Vademecum and can be downloaded from SDMX website at [https://sdmx.org/?page\\_id=1747](https://sdmx.org/?page_id=1747)

Examples of coding flowing BOP and FDI DSD can be found below:

## BOP DSD

Mnemonic	Code	Description
FREQ	Q	Quarterly
ADJUSTMENT	N	Non-seasonally adjusted
REF_AREA	LU	Luxembourg
COUNTERPART_AREA	W1	Rest of the World
REF_SECTOR	S1	All sectors
COUNTERPART_SECTOR	S1	All sectors
FLOW_STOCK_ENTRY	T	Transaction
ACCOUNTING_ENTRY	C	Credit
INT_ACC_ITEM	CA	Current account
FUNCTIONAL_CAT	Z	Not applicable
INSTR_ASSET	Z	Not applicable
MATURITY	Z	Not applicable
UNIT_MEASURE	EUR	Euro
CURRENCY_DENOM	T	All currencies of denomination
VALUATION	X	Unspecified
COMP_METHOD	N	Compilation methodology based on international standards

## FDI DSD:

Mnemonic	Code	Description
FREQ	A	Annual
MEASURE_PRINCIPLE	DI	Directional principle: inward
REF_AREA	LU	Luxembourg
COUNTERPART_AREA	W1	Rest of the World
REF_SECTOR	S1	All sectors
LEVEL_COUNTERPART	IMC	Immediate counterpart
FLOW_STOCK_ENTRY	T	Transaction
ACCOUNTING_ENTRY	L	Liabilities (net incurrence of)
INT_ACC_ITEM	FA	Financial account
FUNCTIONAL_CAT	D	Direct investment
INSTR_ASSET	F	Total financial assets/liabilities
TYPE_ENTITY	ALL	All resident units
UNIT_MEASURE	EUR	Euro
FDI_RELATIONSHIP	I	Influence $\geq=10\%$ of voting power
VALUATION	X	Unspecified
STAT_UNIT	X	Unspecified statistical units
ACTIVITY	FDI_T	All FDI activities
ACTIVITY_ALLOC	Z	Not applicable

## The data flows to be used to report data

Data flows for BPM6-based BOP and FDI DSDs are differentiated according to their time frequency (monthly BOP, quarterly BOP and IIP, annual ITSS and annual FDI transactions, income and positions). As an additional dimension for compilation methodology has been introduced in BOP DSD, there are no longer separate data flows for Community and National concepts. **Countries should use “N” code (Compilation methodology based on international standards) for all items and “C” code (Compilation methodology applied for economic/currency union statistics) only for those items where different figures should be used for calculation of the EU/EA aggregates and for national data.** Generally under BPM6, only Goods data are expected to record different values for “national” and “community” concepts. Countries where no such differences occur should use only code “N” for compilation methodology dimension. Additionally, new option for “Compilation methodology defined locally” (code “L”) has been introduced for those Member States in which definitions of some BOP items published on national level differ from international standards (e.g. SPEs are not included in data disseminated nationally).

The following are the definitions of the data flows in terms of the BOP, ITSS and FDI questionnaires:

<b>Data flow</b>	<b>Data to be sent (in terms of BOP, ITSS and FDI questionnaires)</b>
<b>BPM6_BOP_M</b>	T1
<b>BPM6_BOP_Q</b>	T2.1, T2.2
<b>BPM6_ITS_A</b>	T3
<b>BPM6_FDI_A</b>	T4.1, T4.2, T4.3, T5.1, T5.2
<b>BPM6_BOP_A</b>	Voluntary BOP and IIP back-data available only with annual frequency (planned to be discontinued in 2020).

#### **4.2.4 How many data files?**

The data should be sent using **as few data files as possible** and a single data file may cover **several reporting periods**. However, due to technical limitations and problems with processing of very large files, national compilers are requested, if provided datasets contain all requested series and not only revised subsets, **not to transmit files covering more than five years/twenty quarters**. In case of longer revisions compilers are, thus, requested to divide datasets into few files covering shorter time spans. The differentiation of the data flows is made using the DSI segment, which differ depending on **time frequency (monthly, quarterly or annual)**. Due to the existence of two different Data Structure Definitions (DSD) data sets have to be divided according to the BOP and FDI data flows (e.g. separate files for quarterly BOP and IIP or FDI transactions and positions).

The transmission of data should be carried out following an “**updates and revisions**” approach. In this context, MSs only have to report: **i) the full data set for the (last) reference period (updates); and ii) all revised observations for previous periods**, ensuring that all validation checks are met for all updated or revised periods after each data transmission.

For example, take a quarterly BOP data set being reported for the first time for 2018Q4, with revisions to the previous three quarters (2018Q1 to 2018Q3). Assume also that only time series “Research and development services” (SJ1) and “Professional and management consulting services” (SJ2) are revised, while other remain unchanged for the periods 2017Q1 to 2017Q3. However, because of the accounting identity between time series also values for “Other business services” ( $SJ=SJ1+SJ2+SJ3$ ), “Total services” ( $S=SA+SB+SC+SD+SE+SF+SG+SH+SI+SJ+SK+SL+SN$ ), “Current account” (CA=G+S+IN1+IN2) and “Errors and omissions” (EO=FA-CA-KA) should be revised.

Following an updates and revisions approach, full data set would need to be reported for period 2018Q4, while only series for items “CA”, “S”, “SJ”, “SJ1”, “SJ2” and “EO” would need to be reported for the period 2018Q1 to 2018Q3 (revisions).

This approach reduces the amount of information to be reported, which is particularly relevant when the period open to revisions is long and the data set is large.

#### **4.2.5 Which DataSetID (Data set identification)?**

Each data interchange contains data of a given time frequency (monthly, quarterly or annual). The type of data must be specified in the DataSetID segment (data set identification) of the message. Mixing two types of data, e.g., quarterly BOP and annual ITS, is not allowed.

The following are the valid values for the DSI segment:

<b>Type of data</b>	<b>DataSetID segment</b>
Monthly BOP	<b>BPM6_BOP_M</b>
Quarterly BOP and quarterly IIP	<b>BPM6_BOP_Q</b>
International Trade in Services and Remittances	<b>BPM6_ITS_A</b>
Foreign Direct Investment flows, income and positions	<b>BPM6_FDI_A</b>
BOP and IIP back-data available only with annual frequency (planned to be discontinued in 2020)	<b>BPM6_BOP_A</b>

## **4.2.6 Uniqueness of the key**

No two cells in a data set can have the same key value (the key is the combination of the dimensions of the key family). In other words, the (combination of) values of the dimensions given in a data set must be unique. **This guarantees that there are no duplicates in the dataset**; the elements stored in a cell (value, status, confidentiality) are unique.

## **4.2.7 Which sign convention?**

### **BOP AND ITSS**

**For the current and capital account items:**

**Credits** and **debits** are to be recorded with a plus sign (even though **some exceptions**, such as for net exports of goods under merchanting (negative credits), reinvested earnings in direct investment income or insurance services **can occur**). **For the most part**, only balances in accounts carry a negative sign.

The **balance** is calculated as **credits – debits** and may be positive or negative.

**For the financial account items:**

In BPM6 the headings and signs in BOP financial account have been changed from “credit” and “debit” to “**net acquisition of assets**” and “**net incurrence of liabilities**”. The new terminology and sign convention for the BOP financial account are consistent with those for the IIP i.e. a **positive sign represents an increase**, and a **negative sign represents a decrease**, in the asset or a liability to which it relates. Thus, for “**net acquisition of assets**” in the financial account of the BOP, a plus sign denotes a net increase in financial assets, while a minus sign refers to a net decrease in financial assets.

The **net** is calculated as **net acquisition of assets - net incurrence of liabilities** and may be positive or negative.

The net balance on financial account has the opposite sign in BPM6 compared to BPM5 (e.g. a net inflow in the financial account is represented with a minus sign in BPM6, whereas it had a positive sign in BPM5).

### **FDI TRANSACTIONS, INCOME AND POSITIONS**

As regards the sign convention, the general rule stated above applies also to FDI transactions, income and positions (transactions as part of the financial account, income as part of the current account and positions as part of IIP).

The reporting on net FDI concepts according to the directional principle should use as accounting entries: “**net FDI inward**” for transactions and positions in the compiling economy from abroad (**liabilities (net incurrence of) – assets (net acquisition of)**); “**net FDI outward**” for transactions and positions in investments abroad (**assets (net acquisition of) – liabilities (net incurrence of)**); “**net income on inward FDI**” for net income payable abroad (**debits minus credits**); and “**net income on outward FDI**” for net income receivable from abroad (**credits minus debits**). The “**balance**” shows the total net FDI income of the reporting economy (**net income on outward FDI minus net income on inward FDI**).

### **IIP AND FDI POSITIONS**

In FDI positions data files and for international investment position data for assets and liabilities, values should normally be positive. Negative ones could be observed in exceptional circumstances, as described in the international manuals. These very rare exceptions may occur, for example in the context of FDI equity where the accumulated losses (reported as negative reinvestment of earnings) are larger than the total equity (other than reinvestment of earnings).

For revaluations due to exchange rate change, revaluations due to other price changes and other changes in the volume of assets/liabilities, data are to be reported with a plus sign, whereas decreases in assets and liabilities are to be reported with a minus sign.

The **net** is calculated as **assets - liabilities** and may be positive or negative.

For **net external debt, net liabilities** are calculated as **liabilities -assets**.

## **4.2.8 Which unit multiplier?**

### **Currency:**

All data have to be sent in **Millions of Euro** for **Euro Area Member States** and in **Millions of National currency** for **non-Euro Area countries**. The unit multiplier attribute is to be set to “6” and it is applied at time series level.

**Non-Euro Area countries** should use the relevant code for its national currency (e.g. BGN, CZK, DKK, HRK, HUF, PLN, RON, SEK, GBP) rather than common code for domestic currency (XDC). **Euro Area countries**, for data transmissions for periods before introduction of the Euro, may send data in old national currency (code e.g. “LUF”) or converted to Euro with market exchange rate (code “EUR”).

Generally, the number of decimal digits is “0”. If a country wants to send a figure lower than 1 million, decimals may be used. In this case, the separator has to be a dot (.). (Example: if a country wants to report a value of 10 000 the figure 0.01 has to be sent). This should be indicated in the value of the decimals attribute.

## **4.2.9 What about empty cells?**

If the value of the transaction does not exist or is negligible, this should be reported as zero and not empty. If there are no transactions for a specific item or if the economic activity doesn't exist at all, this should be reported as zero with observation status code “M” – Missing value; data cannot exist.

If the value of the transaction is not known, it should be reported as empty with observation status code “L” - Missing value; data exist but were not collected. Such situations should occur only in exceptional cases.

Further to the above, cells where Reference Area = Counterpart Area should be reported as zero, as such transactions/positions should not exist.

## **4.2.10 How to deal with confidential data?**

Chapter V “Statistical confidentiality” of Regulation (EC) No 223/2009 of the European Parliament and of the Council of 11 March 2009 on European statistics regulates protection and transmissions of confidential data within ESS and ESCB.

Confidentiality status attribute is mandatory in BOP and FDI DSDs and thus each observation has to be flagged with a confidentiality status. Accepted flags are as follows (code list CL\_CONF\_STATUS):

<b>Code</b>	<b>Description</b>	<b>Operational use and details</b>
<b>F</b>	Free; (free for publication)	Observations flagged with F are considered free for publication and may be released through the Eurostat/ECB public databases.
<b>N</b>	Not for publication, restricted for internal use only.	These observations, though not publishable, can be shared, for internal use only, among institutions (users in ECB, ESS, ESCB, other European Commission DGs) following the appropriate agreements. This flag should not be used with an observation which reveals data of individual respondents: in this latter case the observation should be flagged as “confidential statistical information” (see next row). No secondary confidentiality treatment is done for cells with N-flag.
<b>C</b>	Confidential statistical information	These observations are used by the receiver for compilation purposes within the statistics production area. An observation flagged as “confidential” could reveal data of individual respondents. In this case, the corresponding legal acts apply and sharing between institutions would not be possible, unless if foreseen by a legal act.  Before the release of a data set which contains confidential cells, secondary confidentiality treatment must be done in order to eliminate indirect disclosure. <sup>1</sup>
<b>S</b>	Secondary confidentiality set and	This is used by Eurostat to flag observations that must be “suppressed” in a subsequent processing stage in order to

<sup>1</sup> By using secondary confidentiality management techniques, e.g. by reducing the breakdowns, suppressing other components.

<b>Code</b>	<b>Description</b>	<b>Operational use and details</b>
	<i>managed by the receiver, not for publication</i>	appropriately protect and prevent observations flagged (by the sender) as “confidential statistical information” to be indirectly deduced.
<b>D</b>	Secondary confidentiality set by the sender, not for publication	This should be used by the sender (e.g. an NCB/NSI) to flag observations that should be “suppressed” in a subsequent processing stage (in receiver’s side) in order to prevent observations flagged as “confidential statistical information” to be indirectly deduced.

**The transmission of confidential data is needed for the quality of EU/EA aggregates but requires coordination between Member States and Eurostat/ECB to ensure sensible information is not disclosed. Member States can use Confidentiality status attributes (conf\_status) to ensure that sensitive data of individual respondents remain protected when processed by Eurostat/ECB. Member States are invited to use confidential flags conservatively. Moreover, C-flags shall generally not be used in case for quality issues.**

When the information is already released and disseminated by the national compiler (e.g. it is published on the national compiler's website) applying Confidentiality status attributes such as C "Confidential statistical information" or N "Not for publication, restricted for internal use only" is not justified.

Quality issues should be much less frequent for quarterly BOP and IIP data. The confidentiality status attribute "Not for publication, restricted for internal use only" - N flag – shall be used **conservatively** and rather in cases of more detailed breakdowns (e.g. geographical, instrument or sector breakdown) . . Using confidentiality status (C or N flags) to suppress publication of data with insufficient quality should be avoided. Observation status with U flag (low reliability) should be used instead. This would indicate existing observations and, at the same time, users will be aware of the low quality assigned.

In case that data is made confidential because of its quality, the observation status should carry instead the appropriate value “U” (low reliability) for low quality. This would indicate existing observations, but for which the user should also be aware of the low quality assigned.

Generally, with respect to quality reservations, Members States are encouraged to use Observation status attributes (OBS\_STATUS) such as "E" (estimated value), "F" (forecast value), "P" (provisional value), "I" (imputed value) or "U" (low reliability) instead of "N" flag for confidentiality status attribute.

It is recommended in particular applying the observation status "U" – Low reliability – for transmissions of data with quality issues. Data with such observation status and confidentiality status “F” would be published in Eurostat/ECB public databases, but with the appropriate “u” flag.

**The data flagged with the N flag are not released for publication, but the data are not subjected to the secondary confidentiality treatment. Secondary confidentiality treatment is applied only when data is flagged with C.**

Countries can use code C (for primary confidentiality) or D (for secondary confidentiality) to flag their confidential data, while S flag is to be used at Eurostat when treating secondary confidentiality. Eurostat applies secondary confidentiality adding “S” flags to national data as well as the EU/EA aggregates across all BOP and FDI dimensions, in cases when there is risk of disclosure of the confidential values. Secondary confidentiality functions are run separately for each dimension (accounting entry, reference area, counterpart area, functional category, instrument and assets classification, international accounts item, maturity, reference sector, counterpart sector) according to the integrity rules for each dimension. In cases when only one item in the integrity rule is flagged as “confidential”, the second item is flagged with secondary confidentiality “S” flag. For example, when in geographical breakdown equation Rest of the World = EU28 + Extra-EU28, observation for EU28 is transmitted with “C” flag, and Rest of the World and Extra-EU28 with “F” flag, secondary confidentiality “S” flag is added to Extra-EU28 observation.

The transmission of confidential data is very important for the quality of EU aggregates. However, the processing of confidential data implies a number of important constraints and a good co-ordination between Member States and Eurostat/ECB is essential.

Secondary confidentiality treatment must be done when confidential data can be recalculated using other non-confidential data. In order to prevent recalculation of confidential data, the superseding aggregate or one of its sub-components should be suppressed. The secondary confidentiality functions used for all items are mainly based on the integrity rules for each dimension. Interrelationships between the dimensions should be also considered. Confidential flags should be used conservatively as the quantity of data concerned with secondary confidentiality would increase.

Different rules are currently applied by national compilers to identify confidential statistical data.

However, data are to be declared confidential only for the following reasons:

- They may concern a number of observations below a minimum threshold. This number is always more than two (usually 3): if data concerning two respondents were disseminated, each respondent would have easy access to the other's confidential data.
- The data are such that one or more observation(s) dominate(s) the total information by a percentage above a given rate (as provided by national legal frameworks, usually around 85%).
- The data are such that the user or any respondent can estimate the reported value of a respondent quite accurately. Such disclosure occurs, and the data are declared sensitive, if upper and lower estimates for the respondent's value are closer to the reported value than a pre-specified percentage.

#### **4.2.11 Single major events and significant revisions**

The ECB Working Group on External Statistics discussed, at its February 2013 meeting, the approach to provide information on major revisions in a structured way and agreed on the use of a metadata template for its provision. It operationalise requirements of article 2.3 of Guideline ECB/2011/23. It is up to the compiler to consider which single events and revisions to report, but an indicative threshold of EUR 3 billion was agreed. These metadata are to be reported at the same time as the relevant underlying data.

Eurostat would like to receive the same metadata templates prepared for the ECB; these should be sent to the functional mailbox [estat-bop@ec.europa.eu](mailto:estat-bop@ec.europa.eu).

#### **4.2.12 Bilateral data in Geo4**

Commission Regulation (EU) no 555/2012 and Guideline ECB/2011/23 require for quarterly BOP and IIP the transmission of bilateral data in the context of 'Geo 4' detail. This includes data vis-à-vis major extra-EU economic partners and vis-à-vis all non-euro area EU countries (including EU institutions, other international organisations and offshore financial centres). The request of bilateral data vis-à-vis all non-euro area EU countries aims at simplifying the compilation process (data availability) in the context of euro area enlargements and allowing for the compilation of euro area aggregates following a moving concept.

**On voluntary basis, Member States are requested to send for quarterly BOP and IIP full bilateral data with respect to all EU Member States for all items asked with Geo4 geographical breakdown. In case bilateral data would be transmitted, Intra-EU and Intra Euro-area data which could not be allocated to any individual Member States could be reported as "Intra-EU not allocated" or "Intra Euro-area not allocated", respectively.**

#### **4.2.13 Geographical breakdown of merchanting**

Under BPM6 "merchanting" is a separate item to be recorded as part of the goods account. "Net exports of goods under merchanting" includes merchants' margins, holding gains and changes in inventories and is the sum of "goods acquired under merchanting" (credit with negative sign) and "goods sold under merchanting" (credit with positive sign). Net exports of goods under merchanting may have, therefore, positive or negative sign. Concerning the geographical allocation **of merchanting**, as agreed at the meeting of BOP WG on 9-10 April, 2013, **for the purpose of compilation of EU/EA aggregates the net export under merchanting should be distributed according to the countries of the buyers of the goods**. Countries which want to compile for the national datasets, the geographical breakdown of the net export of goods under merchanting only looking at the sum of all (positive and negative) gross credit entries (purchases and sales under merchanting) recorded against each country, i.e. merchanting would be treated as any other transaction under general merchandise, should send to Eurostat/ECB two values, one for the dissemination in the national tables, and one for the production of the EU/EA aggregates. (**See BP/13/15rev and BP/13/26 minutes related to item 15**). This aspect is relevant not only for the item itself but also for total goods, where a Geo 4 detail is mandatory.

#### **4.2.14 Guidelines for the Financial Account and International Investment Position items**

BOP/IIP data are to be compiled following the debtor/creditor approach, instead of the "transactor" approach. In other words, the geographical allocation of assets/credits is to be done on the basis of the residency of the issuer/debtor and not of the "transactor". This is particularly relevant for portfolio and direct investment functional categories, which record tradable instruments. This approach is to be

followed consistently in the geographical and sector allocation of investment income, financial transactions and stocks. For instance, if a French MFI buys a German government bond from an MFI resident in the United States, this would be recorded in the financial account (portfolio investment) of France as: intra euro area, increase of assets, resident sector other MFIs, counterpart sector general government. What is relevant in the residency and sector of the issuer (German general government) and not the fact that the German bond was acquired from an MFI resident in the United States.

Further specific methodological conventions to be followed are **described in the ECB Booklet on the exchange of balance of payments and international investment position (BPM6) in chapter 9 “Euro area data specificities and methodological conventions”**.

#### **4.2.15 Guidelines for FDI items:**

##### **4.2.15.a Resident or non-resident economic activity?**

For **FDI positions and flows**, it is recommended to classify:

- **FDI abroad** according to the activity of the **non-resident enterprise**, and
- **FDI in the reporting economy** according to the activity of the **resident enterprise**.

This recommendation is in line with the guidelines given in the OECD Benchmark Definition (BD4) that “recommends, in both inward and outward direct investment statistics, that, where feasible, the direct investment enterprise be analysed both by its industrial activity in the host country and by the industrial activity of its direct investor”.

	<b>Resident economic activity</b>	<b>Non-resident economic activity</b>
<b>FDI Flows abroad</b>	✓ 	✓
<b>FDI Flows in the reporting economy</b>	✓	
<b>FDI positions abroad</b>		✓
<b>FDI positions in the reporting economy</b>	✓	

☞ **FDI outward flows** may be classified according to the economic activity of the resident entity (the direct investor) as proxy when the non-resident economic activity cannot be identified.

##### **4.2.15.b FDI between fellow enterprises**

Fellow enterprises are identified on the basis of their relationship by being directly or indirectly influenced by the same enterprise in the ownership chain, as defined by the Framework of Direct Investment Relationship (FDIR). The direction of the influence, and in consequence the direction of the transaction/position, is determined according to the residency of the ultimate controlling parent (UCP) of each entity qualifying as fellow enterprise. UCP is defined as the controlling entity above which there is no other controlling entity according to FDIR.

If the UCP of the resident fellow enterprise is also resident, its assets and liabilities vis-à-vis non-resident fellow enterprises are classified as outward FDI (the resident UCP is considered to exert control or influence on non-resident fellow enterprise through the resident fellow enterprise). In contrast, if the UCP of the resident fellow enterprise is non-resident, its assets and liabilities vis-à-vis non-resident fellow enterprises are classified as inward FDI (the non-resident UCP is considered to exert control or influence on resident fellow enterprise through the non-resident fellow enterprise).

##### **4.2.15.c Resident Special Purpose Entities (SPEs)**

BPM6 and BMD4 include some elements which help to identify these types of entities. In the latter standards (Box 6.2), an entity is considered as an SPE, if it meets the following criteria:

- (i) It is a legal entity,
  - a) formally registered with a national authority, and
  - b) subject to fiscal and other legal obligations of the economy in which it is resident;
- (ii) It is ultimately controlled by a non-resident parent, directly or indirectly;

- (iii) It has no or few employees, little or no production in the host economy and little or no physical presence in the economy in which it is created by its parent which is typically located in another country;
- (iv) Almost all of its assets and liabilities represent investments in or from other countries;
- (v) Its core business consists of group financing or holding activities, that is - viewed from the perspective of the compiler in a given country - channelling of funds from non-residents to other non-residents. However, in its daily activities, managing and directing plays only a minor role.

In line with these guidelines of BD4, the BOP Working Group and the ECB Working Group on External Statistics endorsed in 2009 the recommendations of the Technical Expert Group on the Directional Principle (TEG DP) as regards the criteria to be met by an entity to be considered as a SPE for the compilation of national statistics. The recommendation is that an entity could be defined as an SPE in a Member State if it meets all the following criteria:

- (i) It is a legal entity incorporated in the Member State, or a branch registered in the country.
- (ii) It is ultimately controlled by a parent not resident in the Member State, directly or indirectly.
- (iii) It has no or few employees, little or no production in the national economy and little or no physical presence.
- (iv) Cross-border assets and liabilities (assessed from the most recent available positions data) are predominant. In case of chains of entities without physical presence within a country, the assessment should be carried out as if this chain were only one entity.  
This criterion should be assessed on a best efforts basis.
- (v) Its core business frequently (but not necessarily) consists of group financing or holding activities, that is - viewed from the perspective of the compiler in a given country - the channelling of funds from non-residents to other non-residents. However, in its daily activities, managing and directing plays only a minor role.

In addition, conduits and similar entities having a non-resident UCP and limited connection with the local economy should also be treated as SPEs even if they finance themselves locally and do not meet SPE criterion (iii) above.

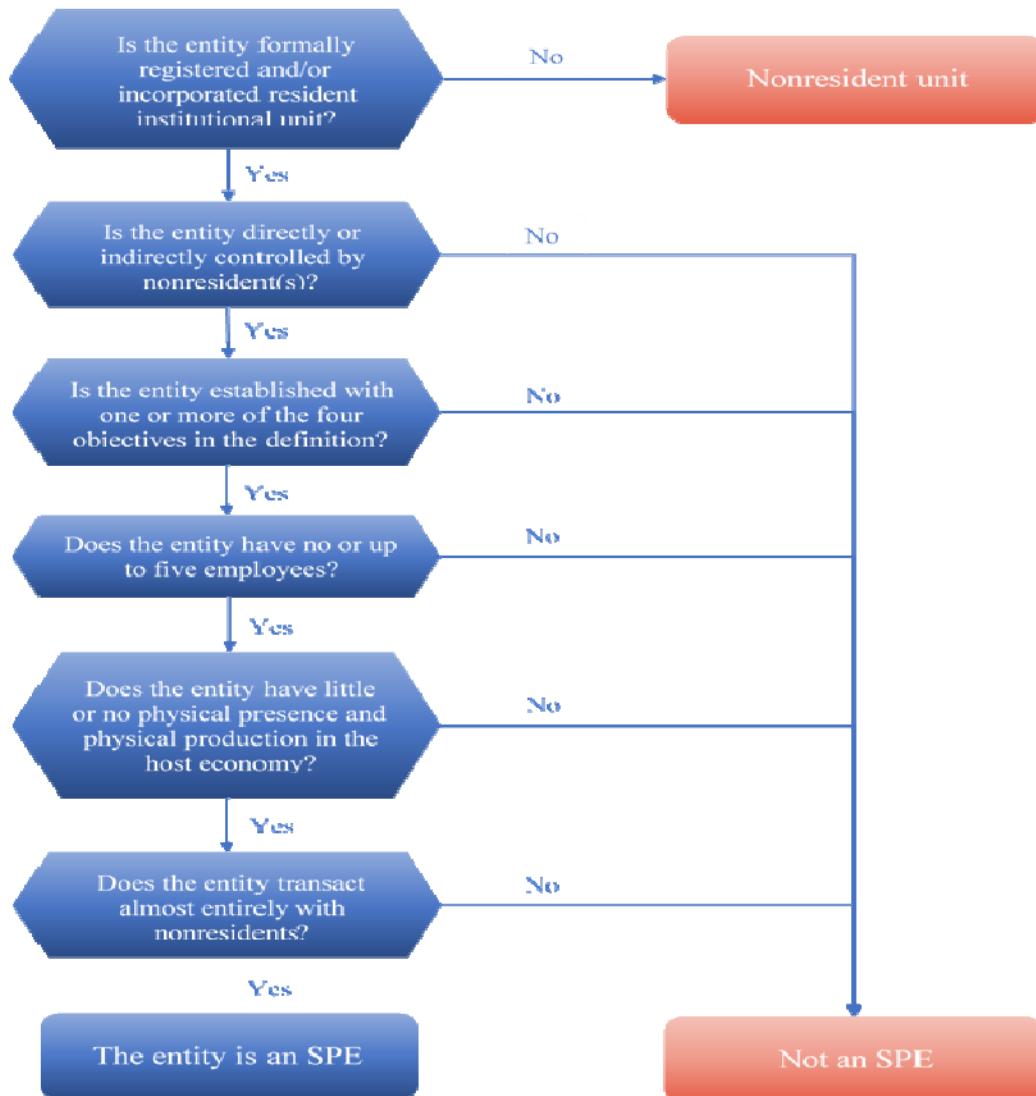

IMF Task Force on Special Purpose Entities proposed the following international definition of SPEs in its final report in October 2018:

**An SPE, resident in an economy, is a formally registered and/or incorporated legal entity recognized as an institutional unit, with no or little employment up to maximum of five employees, no or little physical presence and no or little physical production in the host economy.**

**SPEs are directly or indirectly controlled by non-residents.**

**SPEs are established to obtain specific advantages provided by the host jurisdiction with an objective to (i) grant its owner(s) access to capital markets or sophisticated financial services; and/or (ii) isolate owner(s) from financial risks; and/or (iii) reduce regulatory and tax burden; and/or (iv) safeguard confidentiality of their transactions and owner(s). SPEs transact almost entirely with non-residents and a large part of their financial balance sheet typically consists of cross-border claims and liabilities.**

Report includes the following Decision Tree to Identify SPEs for Balance of Payments, International Investment Position, Foreign Direct Investment and International Trade in Services statistics:

#### **4.2.16 Data quality controls**

Before each data transmission to Eurostat or ECB, national compilers should conduct plausibility checks and ensure accounting integrity of the datasets. In order to help national compilers, BOP/IIP BPM6 EDIT validation is available on CIRCABC under: ESTAT/bop/Library/validation\_tool/Bop\_IIP.

BPM6 EDIT validation tool for International Trade in Services statistics and BPM6\_BDT4 EDIT validation tool for Foreign Direct Investment have been already available in CIRCABC, in International Trade in Services statistics and Foreign Direct Investment domains (please choose “Library” section). They can be also alternatively accessed in Balance of Payments domain of CIRCABC.

New validation services are planned to be introduced:

- **STRUVAL** –Structure Validation (DSD based) – it checks the data structure format, as well as concepts, codes and code lists,
- **CONVAL** –Content Validation (Rule based) – it checks the reported observations, rule sets for the datasets and intra-and inter-file validation rules.

Validations by STRUVAL and CONVAL will be performed automatically on each data transmission. Validation services will send automated notifications via email with only validation results (success or error), while detailed reports will be available for download from EDAMIS.

Configuration of ITSS dataset for the validation workflow is now finalized and should be operational during the next annual transmission in 2020. Work on the implementation for BOP and IIP datasets is ongoing and planned to be finalized until end of 2020. A testing phase, during which national compilers will be able to use validation services without actual data transmission (instead of validation with EDIT tool), is expected to start in May 2020.

New validation services are designed to work only with data transmitted in SDMX-ML format (versions 2.0 and 2.1). SDMX-EDI (GESMES/TS) formats will not be supported.

In Eurostat, after automatic checking if all received series keys are syntactically correct, further completeness and consistency checks are performed by members of BOP, ITSS and FDI items in the Eurostat internal production database. Once the basic completeness and consistency of received data has been checked Eurostat and the ECB carry out time series analysis, so that abnormal observations (outliers) and revisions are detected and further investigated in cooperation with national compilers.

Information on major revisions should be reported by national compilers in the context of the metadata transmissions to ensure a smooth data production (please see Section 4.2.11). In the revision analysis, the revised series are compared with the data previously reported for the same reference time period. In order to detect outliers, comparison with data transmitted for the same month/quarter of the previous year is carried out. More detailed analysis of revisions takes place in the framework of the annual quality reports on BOP, ITSS and FDI data.

Data sent to Eurostat and the ECB should respect a set of validation rules. The types of validation rules that data have to be compliant with are as follows:

- Geographical breakdown: intra and extra euro area and intra and extra EU transactions or positions should sum up to transactions or positions vis-à-vis rest of the world. Consistency with additional geographical integrity rules is checked for the annual international trade in services and foreign direct investment. Codes for geographical and economic aggregates generally concern fixed compositions of these aggregates. The exceptions are Intra/Extra EU/Euro Area not-allocated codes, where changing compositions should be used. In case of any changes in the compositions, new codes in CL\_AREA code list will be created.
- Reference and counterpart sector: Total economy should be consistent with the sum of the subsectors
- Accounting item: e.g. balance should be equal to credit minus debit
- International accounts item: e.g. current account is equal to the sum of its components (goods, services, primary and secondary income); total services is equal to sum of services' categories.
- Functional category: e.g. total (financial account) equal to direct, portfolio, other investment and financial derivatives and reserve assets.
- Instrument and assets classification: e.g. gross external debt is equal to sum of its sub-components.
- Maturity classification: e.g. long term and short term add up to all original maturities
- Currency classification: e.g. the currency breakdown (Euro, US dollar, other currencies) adds up to the total (all currencies of denomination).
- Activity breakdown consistency for annual FDI is checked across integrity rules listed in Appendix 1.

Financial derivatives and employee stock options are mandatory with a breakdown between assets and liabilities only for positions. The following checks are therefore conducted for total financial account:

- Monthly and quarterly balance of payments - only the net financial account transaction will be validated using integrity rule  $_T=D+O+P+F+R$ ,
- International investment position – The total stocks will be validated using  $_T=D+O+P+F+R$  (for assets and net) and  $_T=D+O+P+F$  (for liabilities),
- Other flows - there are no “net” requirements for revaluations due to exchange rate changes, revaluations due to other price changes and other changes excluding revaluations. The exception is financial derivatives and employee stock options which is requested only on “net” basis and only for revaluations due to other price changes. Therefore, the validation rule on the net financial account, other flows will be performed as follows:  $_T.A-_T.L=(D.A-D.L)+(P.A-P.L)+F.N+(O.A-O.L)+R.A$ . (for revaluations due to other price changes), and  $_T.A-_T.L=(D.A-D.L)+(P.A-P.L)+(O.A-O.L)+R.A$ . (for revaluations due to exchange rate changes and other changes excluding revaluations), where A, L, N stand for assets, liabilities and net respectively.

After the agreement of the relevant Member State Eurostat may recalculate total financial account transactions in quarterly BOP data for net acquisition of assets and net incurrence of liabilities to ensure that disseminated country figures follow the same methodological convention (i.e. net financial derivatives and employee stock options are included in total net acquisition of financial assets).

The credits and debits goods figures vis-a-vis Rest of the World, Intra-EU and Extra-EU are compared with international trade in goods statistics. For all countries the latter data set is expected to constitute the basis for the calculation of the goods item in accordance with the BOP concepts. Whereas the two data sets have conceptual differences and may have discrepancies because of time of recording issues, their patterns are expected to be very similar.

Main current and capital account items are also reconciled on quarterly basis with the available quarterly sector accounts figures.

More detailed external consistency analysis with international trade in goods statistics and national accounts takes place in the framework of the annual quality report. This report includes also the following analysis:

- Stock/flow reconciliation: stocks in period t (by both functional category and financial instrument) should be equal to stocks in period t-1 plus transactions in period t plus other flows in period t.
- Indicators of errors and omission are calculated to analyse size, evolution and possible explanations for this item,
- Bilateral Intra-EU asymmetries on ITSS, FDI and personal transfers are presented as annex to the quality report. National compilers are encouraged to perform regular checks of their FDI transactions and positions through the FDI network and possibly conduct bilateral exercises to reduce asymmetries in services.

#### **4.2.17 International Data Coordination project**

International Data Coordination project aims at reducing the reporting burden on national compilers and to ensure that the same data are disseminated by various international organisations (Bank for International Settlements (BIS), the European Central Bank (ECB), Eurostat, the International Monetary Fund (IMF), Organisation for Economic Co-operation and Development (OECD), World Bank and the United Nations Statistics Department (UNSD)). European countries participating in the project will no longer need to provide BOP/IIP data to the IMF. Therefore, a merged BOP/IIP reporting template that meets the current data requirements of the IMF, ECB and Eurostat has been developed. Compared with the current Eurostat/ECB templates for quarterly balance of payments and quarterly international investment position it encompasses also the additional items which are included in the IMF template. All supplementary items (with exception for loans where data vis-à-vis IMF and Rest of the World except IMF are asked) are requested only vis-à-vis Rest of the World.

Most relevant are:

1. All BPM6 standard components of goods and services accounts:

- Goods for processing in reporting economy and goods for processing abroad,
- Transport by modes of transport,
- Detailed breakdown for travel,
- Construction in reporting economy and construction abroad
- Additional detail on insurance and pension services
- Telecommunications, computer, and information services separately identified.

2. Additional functional category breakdown for direct investment between fellow enterprises and related income.

3. Sector breakdown - additional request for monetary authorities, as well as for sectors other than deposit-taking corporations and general government, other financial corporations (different allocation of money market funds compared with Eurostat/ECB requests).

4. Data on financial derivatives and employee stock options with breakdown into net acquisition of assets/net incurrence of liabilities for transactions and more detailed instrument breakdown of this functional category,

5. Exceptional financing.

New template on the memorandum items to International Investment Position has been added to Eurostat/ECB data requests. It includes:

- Currency composition of debt claims on non-residents by sector (BPM6 table A9-I.1a)<sup>2</sup>,
- Currency composition of debt liabilities to non-residents by sector (BPM6 table A9-I.2a)<sup>1</sup>,
- Currency composition of notional values of foreign currency derivatives by sector (BPM6 tables A9-I.1b and A9-I.2b)<sup>1</sup>,
- Reserve related liabilities (BPM6 table A9-V).

<sup>2</sup> For euro area Member States "Euro" is the domestic currency. Therefore, data for "Euro" as foreign currency should be provided as "0".

All additional series should be reported on a **voluntary basis**; however, all EU countries are requested to continue transmission of items that they are currently reporting to the IMF by including them in datasets sent to Eurostat/ECB. Particularly, the full (Sec2) sector detail is crucial to adjust data on MFIs (European concept) into those on deposit-taking corporations (BPM6 concept) and to attribute MMFs to other financial corporations, according to BPM6 definitions. Currently, if all relevant data are available, recalculation of the sector breakdown is done by the IMF. After implementation of the IDC project, if data are free for publication, recalculation of sector breakdown for the IMF needs will need to be done by the ECB or Eurostat. Reporting of data on monetary authorities is purely voluntary and is requested when data for “central bank” and “monetary authorities”<sup>3</sup> are not the same.

The existing deadlines for data transmissions to Eurostat/ECB will apply to all series; it should allow for dissemination by the IMF at the same time as by Eurostat and the ECB. Eurostat and the ECB will be also responsible that consistent data are published by international organisations and on national websites. Only data flagged as "free for publication" will be included in International Data Coordination project.

Participation in the project is **voluntary**.

According to the proposed arrangement, responsibility for data validation and data provision to other international organizations is divided as follow:

- ECB – euro Area countries;
- Eurostat – non euro area EU Member States (possibly also EFTA countries);
- IMF – all other countries.

---

<sup>3</sup> Monetary authorities encompass the central bank (which subsumes other institutional units included in the central bank subsector, such as the currency board) and certain operations usually attributed to the central bank but sometimes carried out by other government institutions or commercial banks, such as the government owned commercial banks (BPM6 par.6.66).

# **5. QUESTIONNAIRES**

## **IMPORTANT NOTE**

The different questionnaires  
(T1, T2.1, T2.2, T3, T4.1, T4.2 T4.3, T5.1 and T5.2)  
are presented on the following pages.

In the following pages questionnaires as prepared by Eurostat and ECB are displayed. For questionnaires T1, T2.1 and T2.2 Eurostat and ECB requirements are identical and the same datasets should be transmitted to both institutions.

---

Light blue shading indicates series that are mandatory only for Euro Area Member States (according to the Regulation).

Orange shading of the geographical detail indicates series whose reporting have been additionally agreed by the WG-ES and BOP WG and which are not included in Guideline and Regulation.

Light red shading indicates voluntary seasonally adjusted series

To increase readability we use the following stand-ins:

# serves as a stand in for the Reference Area for which the codes are provided in Appendix 2

% serves as a stand in for the Counterpart Area for which the codes are provided in Appendix 3

@ serves as a stand-in for the Accounting Item, i.e. for the Current and Capital Accounts: Credits C and Debits D and for the Financial Account:Net Acquisition of Assets A and Net Incurrence of Liabilities L.

\$ serves as a stand in for the Unit of measurement (currency) for which the codes are provided in Appendix 8.

& serves as a stand in for Seasonal Adjustment. The reporting of seasonal adjusted data can be done with the most appropriate code value in the dimension CL\_ADJUSTMENT ("S= Seasonally adjusted data, not calendar adjusted" or "Y= Calendar and seasonally adjusted data")

# **QUESTIONNAIRE T2.1**

## **DATASET QBOP**

## **QUARTERLY BOP**

**Data flows = BPM6\_BOP\_Q**

**Deadline = T+82 for Euro Area countries, T+85 days for non-Euro Area countries**

**Quarterly b.o.p.

Light blue shading indicates series that are mandatory only for Euro Area Member States (according to the Regulation).				
Orange shading of the geographical detail indicates series whose reporting have been additionally agreed by the WG-ES and BOP WG and which are not included in Guideline and Regulation.				
Blue gray shading o indicates series mandatory for Euro Area Member States in data transmissions to the ECB according to Guideline 2016/231; they are voluntary in data transmissions to Eurostat.				
Yellow shading indicates additional series requested by the IMF to be reported on the voluntary basis				
(*) signifies that for the liabilities side Institutional Sector Breakdown level 1 (Sec 1) and not Sec 2, shall be mandatory for Member States not participating in the Monetary Union (according to the Regulation)				
(**) Total financial account with Geo 2 breakdown is mandatory for Euro Area MSs in the transmissions to the ECB and is voluntary in transmissions to Eurostat				
Light red shading indicates voluntary seasonally adjusted series				
To increase readability we use the following stand-ins:				
# serves as a stand in for the Reference Area for which the codes are provided in Appendix 2.				
% serves as a stand in for the Counterpart Area for which the codes are provided in Appendix 3.				
@ serves as a stand-in for the Accounting Item, i.e. for the Current and Capital Accounts: Credits C, Debits D and Balances B, and for the Financial Account: Net Acquisition of Assets A, Net Incurrence of Liabilities L and Net N.				
\$ serves as a stand in for the Unit of measurement (currency) for which the codes are provided in Appendix 8.				
& serves as a stand in for Seasonal Adjustment. The reporting of seasonal adjusted data can be done with the most appropriate code value in the dimension CL_ADJUSTMENT ("S= Seasonally adjusted data, not calendar adjusted" or "Y= Calendar and seasonally

Light blue shading indicates series that are mandatory only for Euro Area Member States (according to the Regulation).

Light orange shading indicated that geographical detail shall be mandatory for Member States not participating in the Monetary Union from 2019 onwards (according to the Regulation)

Dark blue shading o indicates series mandatory for Euro Area Member States in data transmissions to the ECB according to Guideline 2016/231; they are voluntary in data transmissions to Eurostat.

Yellow shading indicates additional series requested by the IMF to be reported on the voluntary basis

(\*) signifies that for the liabilities side Institutional Sector Breakdown level 1 (Sec 1) and not Sec 2, shall be mandatory for Member States not participating in the Monetary Union (according to the Regulation)

(\*\*) Total financial account with Geo 2 breakdown is mandatory for Euro Area MSs in the transmissions to the ECB and is voluntary in transmissions to Eurostat

Orange shading of the geographical detail indicates series whose reporting have been agreed by the WG-ES and BOP WG.

To increase readability we use the following stand-ins:

# serves as a stand in for the Reference Area for which the codes are provided in Appendix 2.

% serves as a stand in for the Counterpart Area for which the codes are provided in Appendix 3

@ serves as a stand-in for the Accounting Item, i.e.: Assets A, Liabilities L and Net N.

\$ serves as a stand in for the Unit of measurement (currency) for which the codes are provided in Appendix 8.

Orange shading of the geographical detail indicates series whose reporting have been agreed by the WG-ES and BOP WG.

Light blue shading indicates series that are mandatory only for Euro Area Member States (according to the Regulation).

To increase readability we use the following stand-ins:

# serves as a stand in for the Reference Area for which the codes are provided in Appendix 2

% serves as a stand in for the Counterpart Area for which the codes are provided in Appendix 3.

^ serves as a stand in for the list dimension, i.e. K7B for the CHPR, K7A for the CHVL and KA for OTHC.

@ serves as a stand-in for the Accounting Item, i.e. Assets A, Liabilities L and Net N.

\$ serves as a stand in for the Unit of measurement (currency) for which the codes are provided in Appendix 8.

# **MEMORANDUM ITEMS TO INTERNATIONAL INVESTMENT POSITION**

**Data flow = BPM6\_BOP\_Q**

**Deadline = voluntary data transmission, possibly to be  
aligned with QIIP transmission dates**

Only items in bold are required by the Commission Regulation

To increase readability we use the following stand-ins:

# serves as a stand-in for the Reference Area for which the codes are provided in Appendix 2.

% serves as a stand-in for the Counterpart Area for which the codes are provided in Appendix 3.

@ serves as a stand-in for the Accounting Item, i.e. : Credits C, Debits D and Balances B.

\$ serves as a stand-in for the Unit of measurement (currency) for which the codes are provided in Appendix 8.

## 6. STATISTICAL DIMENSIONS AND ATTRIBUTES

### IMPORTANT NOTE:

**Only the codes included in the following lists can be used for data transmission.**

This chapter provides an overview of the codes lists that have to be used in data transmission, as defined in BOP and FDI Data Structure Definitions.

The specific codes of each of the lists below are available as part of the BOP DSD version 1.12 and FDI DSD version 1.7. **The last XLS versions of the BOP and FDI DSDs are included in Annexes 1 and 2 to the document. They are also available in SDMX-ML V2.0 and SDMX-ML V2.1 at [http://sdmx.org/?page\\_id=1747](http://sdmx.org/?page_id=1747)**

### **6.1.BOP DSD dimensions:**

#### **6.1.1 Frequency**

This concept identifies the periodicity of the reported data. Example: if the frequency of the time series is quarterly, the "Frequency" dimension for that time series should be coded as "Q".

- **Definition:** The frequency of the series
- **Concept mnemonic/Identifier:** FREQ
- **Name of the code list:** Frequency code list - CL\_FREQ
- **Maintenance agency:** SDMX
- **Format:** Fixed length - A1

**See Annex 1: BOP DSD v. 1.12, sheet 1 CL\_FREQ**

#### **6.1.2 Adjustment indicator**

This concept identifies the type of adjustment made to the time series. These adjustments refer to seasonal, trading day, and trend cycle adjustments. In practice, they usually apply only to infra-annual series, while annual time series data would usually be coded as "neither seasonally or working day adjusted" (code N).

- **Definition:** Indicates whether a seasonal adjustment and/or a working day adjustment has been applied or not.
- **Concept mnemonic/Identifier:** ADJUSTMENT
- **Name of the code list:** Adjustment code list - CL\_ADJUSTMENT
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..7

**See Annex 1: BOP DSD v. 1.12, sheet 2 CL\_ADJUSTMENT**

#### **6.1.3 Reference country or area**

This concept identifies the reference area for the time series encoded using the relevant code list of the DSD. The reference area is an economic territory, country, or region for which external sector statistics are provided. The country code list follows the ISO 3166-1 alpha-2 classification and is a "cross-domain" code list, used also in National Accounts. The codes used for various regional groupings were harmonized across international agencies that use the BOP-DSD, wherever possible. Codes related to International Organisations start with a number. Codes related to America start with A, Europe with E, Africa with F, Asia with S, World with W.

- **Definition:** The country or geographical/political group of countries related to a measured economic phenomenon.
- **Concept mnemonic/Identifier:** REF\_AREA
- **Name of the code list:** Area code list - CL\_AREA
- **Maintenance agency:** IMF
- **Format:** Variable length - AN..5

**See Annex 1: BOP DSD v. 1.12, sheet 3 CL\_AREA**

#### **6.1.4 Counterpart area**

Identifies the counterpart area for transactions and positions. All time series for external sector statistics make reference to transactions or positions data between residents and non-residents during a period (transactions) or at a specific point in time (position). The counterpart area concept is used to identify the territory of the non-resident entity of individual time series.

- **Definition:** The counterpart country or geographical/economical group of countries of the reference country or area.
- **Concept mnemonic/Identifier:** COUNTERPART\_AREA
- **Name of the code list:** Area code list - CL\_AREA
- **Maintenance agency:** IMF
- **Format:** Variable length - AN..5

**See Annex 1: BOP DSD v. 1.12, sheet 3 CL\_AREA**

### **6.1.5. Reference sector**

This concept identifies the reference (institutional) sector, which is the corresponding resident sector within the compiling economy for the BOP/IIP item. Traditionally, time series for the goods and services account of the balance of payments refer to the relations of all the institutional sectors of the reference area (coded as "S1" for total economy) with the Rest of the World. For these time series, the "reference sector" dimension would usually be coded as "S1". It should be noted that the sector classification in external sector statistics is generally much more aggregated than in national accounts. The items list provided in the "CL\_SECTOR" code list includes all the groupings of sectors commonly used in external sector statistics, as well as the more complete sector breakdowns used in national accounts. When reporting data for external sector statistics, only a few of the sectors provided in the "CL\_SECTOR" code list will be used. Most investment income transactions traditionally refer to "all institutional sectors" but the DSD provides for the encoding of time series identifying the sector of the resident units involved in the investment income transactions. For the financial account, most time series (with the exception of those related to direct investment functional category) require a specific institutional sector breakdown for the resident units (reference sector).

- **Definition:** Institutional sector in the Reference country or area.
- **Concept mnemonic/Identifier:** REF\_SECTOR
- **Name of the code list:** Institutional sector code list - CL\_SECTOR
- **Maintenance agency:** Eurostat
- **Format:** Variable length – AN..7

Please, refer to the questionnaires for codes to be sent.

**See Annex 1: BOP DSD v. 1.12, sheet 5 CL\_SECTOR**

### **6.1.6 Counterpart sector**

This concept identifies the counterpart (institutional) sector of the external sector time series. The items and codes included under this concept accommodate the needs of external sector and national accounts statistics. Traditionally, time series for the external sector statistics are vis-à-vis a counterpart area and a counterpart sector defined as "total economy" (which covers all counterpart sectors). However, for selected financial transactions, a breakdown for the counterpart sector is requested.

- **Definition:** Counterpart institutional sector in the reporting country or area
- **Concept mnemonic/Identifier:** COUNTERPART\_SECTOR
- **Name of the code list:** Institutional sector code list - CL\_SECTOR
- **Maintenance agency:** Eurostat
- **Format:** Variable length – AN..7

**See Annex 1: BOP DSD v. 1.12, sheet 5 CL\_SECTOR**

### **6.1.7 Flows and stocks indicator**

This concept identifies whether the time series is a transaction flow, a position (stock), or a change in position not due to transactions (e.g., revaluations).

- **Definition:** Describes the data type, e.g. transactions or positions.
- **Concept mnemonic/Identifier:** FLOW\_STOCK\_ENTRY
- **Name of the code list:** Flow or stock entry code list - CL\_FSENTRY
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..3

**See Annex 1: BOP DSD v. 1.12, sheet 7 CL\_FSENTRY**

### **6.1.8 Accounting entries**

This concept identifies the type of accounting entry: (i) for transactions on current and capital account components, whether the time series is a credit, a debit, or the balance of credit minus debit. Credit and debit series are reported as positive numbers, thus the balance is expected to correspond to credit minus debit; (ii) for positions and transactions data in the financial account, whether the time series refers to assets (or the net acquisition of), liabilities (or the net incurrence of), or a net position, defined as assets minus liabilities. Time series for transactions related to the

International Accounts Item “*financial account*” are usually recorded as net acquisition of financial assets and net incurrence of liabilities. However, there are instances when time series for the underlying gross increases and decreases in assets and liabilities could be needed. As such, the “Accounting Entries” concept also provides additional items to further identify transactions in financial assets as gross increases and gross decreases of assets, and transactions in financial liabilities as gross increases and gross decreases of liabilities. Gross increases and decreases are reported as positive numbers, while the net acquisition and the net incurrence correspond to increases minus decreases.

- **Definition:** Types of accounting entries in relation to the reporting country or area.
- **Concept mnemonic/Identifier:** ACCOUNT\_ENTRY
- **Name of the code list:** Accounting entry code list - CL\_ACCOUNT\_ENTRY
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..3

**See Annex 1: BOP DSD v. 1.10, sheet 8 CL\_ACCOUNT\_ENTRY**

### **6.1.9 International accounts item**

This concept identifies the detailed items that are outcomes of production activities (goods and services, types of primary and secondary income, capital accounts items, and provides a single item for the financial account. This dimension is specific for BOP and not shared with National Accounts, however, when items included in this list are identical to those used in the national accounts STO dimension, the same code is used. This is, for example, the case for codes like D41, D42, D75, D76 etc, etc.

- **Definition:** Item classification for international accounts statistics.
- **Concept mnemonic/Identifier:** INT\_ACC\_ITEM
- **Name of the code list:** Item classification code list - CL\_ACCOUNTS\_ITEM
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..8

**See Annex 1: BOP DSD v. 1.12, sheet 9 CL\_ACCOUNTS\_ITEM**

### **6.1.10 Functional category**

This concept identifies functional categories applicable of financial accounts. It applies to all time series for which the “international accounts items” are coded as “*financial account*” and as types of “*investment income*”. For other time series, this item is coded as “non applicable”.

- **Definition:** Classification by functional of the financial investment.
- **Concept mnemonic/Identifier:** FUNCTIONAL\_CAT
- **Name of the code list:** Functional category code list - CL\_FUNCTIONAL\_CAT
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..6

**See Annex 1: BOP DSD v. 1.12, sheet 10 CL\_FUNCTIONAL\_CAT**

### **6.1.11 Instrument and assets classification**

This concept identifies the type of financial instrument which is reported in the external sector time series. This concept is also used in National Accounts. Therefore it includes a long list of items and codes (e.g. all those relating to non-financial assets) that will not be used in external sector statistics. Similarly, to the functional category concept, the financial instruments concept applies to all time series for which the “international accounts item” are coded as “*financial account*” and to selected items coded as “*investment income*”. For other time series, this item is coded as “non applicable”.

- **Definition:** Breakdown by financial instruments and assets.
- **Concept mnemonic/Identifier:** INSTR\_ASSET
- **Name of the code list:** Financial instruments and assets classification code list - CL\_INSTR\_ASSET
- **Maintenance agency:** Eurostat
- **Format:** Variable length – AN..7

**See Annex 1: BOP DSD v. 1.12, sheet 11 CL\_INSTR\_ASSET**

### **6.1.12 Maturity**

This concept identifies the types of maturity of the financial instrument of the external sector statistics time series. For most time series for which the “international accounts items” are sub-components of the current account or the capital account, the maturity concept will be coded as “not applicable”. For most “international accounts item” coded as “*financial account*” and for selected items coded as “*investment income*”, the time series are usually coded with reference to the maturity of the coded financial instrument. For financial instruments that are classified as equity

securities, other securities, and investment fund shares, the maturity is “not applicable”, as they do not have a specified redemption or repayment date.

- **Definition:** Original maturity of financial instrument, combined with remaining maturity
- **Concept mnemonic/Identifier:** MATURITY
- **Name of the code list:** Maturity code list - CL\_MATURITY
- **Maintenance agency:** Eurostat
- **Format:** Variable length –AN..6

**See Annex 1: BOP DSD v. 1.12, sheet 12 CL\_MATURITY**

### **6.1.13 Unit of measure**

This concept identifies the unit of measure in which the time series is recorded. Most frequently, but not always, it refers to a currency unit.

- **Definition:** Unit of measure for reporting the time-series
- **Concept mnemonic/Identifier:** UNIT\_MEASURE
- **Name of the code list:** Unit of measure code list - CL\_UNIT
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..15

**See Annex 1: BOP DSD v. 1.12, sheet 13 CL\_UNIT**

### **6.1.14 Currency of denomination**

This concept identifies the currency of denomination of the financial instrument or of the invoice of goods and services. For balance of payments and international investment position data, the concept is usually recorded as “all currency of denomination”. However, there are some instances when more detailed information is needed on the currency of denomination.

- **Definition:** Currency of issuance for financial items or invoicing for goods and services
- **Concept mnemonic/Identifier:** CURRENCY\_DENOM
- **Name of the code list:** Currency of issuance or invoicing code list - CL\_CURRENCY
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..3

**See Annex 1: BOP DSD v. 1.12, sheet 13 CL\_UNIT**

### **6.1.15 Valuation**

This concept identifies the method of valuation for selected transactions and positions data. There are a number of instances when more detailed information could be sought on the valuation method followed for specific items, hence the reason for introducing this concept.

- **Definition:** Price valuation.
- **Concept mnemonic/Identifier:** VALUATION
- **Name of the code list:** Valuation code list - CL\_VALUATION
- **Maintenance agency:** Eurostat
- **Format:** Variable length – AN..2

**See Annex 1: BOP DSD v. 1.12, sheet 15 CL\_VALUATION**

### **6.1.16 Compilation methodology**

This concept is used to distinguish between external sector time series which are compiled according to the methodology applied for national statistics by opposition to similar external sector time series which follow the specific methodology applied for economic or currency union statistics.

- **Definition:** Identify the compilation methodology of otherwise identical concepts
- **Concept mnemonic/Identifier:** COMP\_METHOD
- **Name of the code list:** Compilation methodology code list - CL\_COMP\_METHOD
- **Maintenance agency:** IMF
- **Format:** Fixed length – A1

**See Annex 1: BOP DSD v. 1.12, sheet 16 CL\_COMP\_METHOD**

## **6.2. BOP DSD attributes**

### **6.2.1 Time format (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** TIME\_FORMAT
- **Name of the code list:** Time format code list - CL\_TIME\_FORMAT
- **Maintenance agency:** SDMX
- **Format:** Variable length – AN..4

**See Annex 1: BOP DSD v. 1.12, sheet A1 CL\_TIME\_FORMAT**

### **6.2.2 Observation status (mandatory)**

- **Attachment level:** Observation
- **Concept mnemonic/Identifier:** OBS\_STATUS
- **Name of the code list:** Observation status code list - CL\_OBS\_STATUS
- **Maintenance agency:** SDMX
- **Format:** Fixed length - A1

**See Annex 1: BOP DSD v. 1.12, sheet A2 CL\_OBS\_STATUS**

### **6.2.3 Confidentiality status (mandatory)**

- **Attachment level:** Observation
- **Concept mnemonic/Identifier:** CONF\_STATUS
- **Name of the code list:** Confidentiality status code list - CL\_CONF\_STATUS
- **Maintenance agency:** SDMX
- **Format:** Fixed length - A1

**See Annex 1: BOP DSD v. 1.12, sheet A3 CL\_CONF\_STATUS**

### **6.2.4 Pre-break value (conditional)**

- **Attachment level:** Observation
- **Concept mnemonic/Identifier:** PRE\_BREAK\_VALUE
- **Name of the code list:** Uncoded - Free Text (up to 15 characters)
- **Maintenance agency:** IMF
- **Format:** Free Text

### **6.2.5 Comments to the observation value (conditional)**

- **Attachment level:** Observation
- **Concept mnemonic/Identifier:** COMMENT\_OBS
- **Name of the code list:** Uncoded - Free Text (up to 4000 characters)
- **Maintenance agency:** IMF
- **Format:** Free Text AN..4000

### **6.2.6 Title complement - detailed description of the series (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** COMMENT\_TS
- **Name of the code list:** Uncoded - Free Text (up to 1050 characters)
- **Maintenance agency:** IMF
- **Format:** Free Text – AN..1050

### **6.2.7 Short title (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** TITLE
- **Name of the code list:** Uncoded - Free Text (up to 200 characters)
- **Maintenance agency:** IMF
- **Format:** Free Text – AN..200

### **6.2.8 Unit multiplier (mandatory)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** UNIT\_MULT
- **Name of the code list:** Unit multiplier code list - CL\_UNIT\_MULT

- **Maintenance agency:** SDMX
- **Format:** Variable length – N..2

**See Annex 1: BOP DSD v. 1.12, sheet A8 CL\_UNIT\_MULT**

### **6.2.9 Decimals (mandatory)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** DECIMALS
- **Name of the code list:** Decimals code list - CL\_DECIMALS
- **Maintenance agency:** SDMX
- **Format:** Variable length – N..2

**See Annex 1: BOP DSD v. 1.12, sheet A9 CL\_OBS\_DECIMALS**

### **6.2.10 Time period collection (mandatory)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** TIME\_PER\_COLLECT
- **Name of the code list:** Time period collection code list - CL\_TIME\_COLLECT
- **Maintenance agency:** IMF
- **Format:** Fixed length - A1

**See Annex 1: BOP DSD v. 1.12, sheet A10 CL\_TIME\_COLLECT**

### **6.2.11 Reference period detail (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** REF\_PERIOD\_DTL
- **Name of the code list:** Reference period code list - CL\_REF\_PERIOD\_DTL
- **Maintenance agency:** Eurostat
- **Format:** Variable length – AN..3

**See Annex 1: BOP DSD v. 1.12, sheet A11 CL\_REF\_PERIOD\_DTL**

### **6.2.12 Compiling organisation (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** COMPILING\_ORG
- **Name of the code list:** Compiling organisation code list - CL\_ORGANISATION
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..6

**See Annex 1: BOP DSD v. 1.10, sheet A12 CL\_ORGANISATION**

### **6.2.13 Underlying compilation (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** DATA\_COMP
- **Name of the code list:** Uncoded - Free Text (up to 4000 characters)
- **Maintenance agency:** IMF
- **Format:** Free text – AN..4000

### **6.2.14 Data dissemination agency (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** DISS\_ORG
- **Name of the code list:** Dissemination organisation code list - CL\_ORGANISATION
- **Maintenance agency:** IMF
- **Format:** Variable length – AN..6

**See Annex 1: BOP DSD v. 1.12, sheet A12 CL\_ORGANISATION**

### **6.2.15 Title complement (conditional)**

- **Attachment level:** Series
- **Concept mnemonic/Identifier:** TITLE\_COMPL
- **Name of the code list:** Uncoded - Free Text (up to 4000 characters)
- **Format:** Variable length – AN..4000

## **6.3. FDI DSD dimensions**

### **6.3.1 Frequency (common concept with BOP DSD)**

#### **6.3.2 Measurement principle**

- **Definition:** The basis for measuring transactions and positions
- **Concept mnemonic/Identifier:** MEASURE\_PRINCIPLE
- **Name of the code list:** Measurement principle code list - CL\_MEASURE\_PRINCIP
- **Maintenance agency:** OECD
- **Format:** Variable length – A1 - A2

**See Annex 2: FDI DSD v. 1.7, sheet 2 CL\_MEASURE\_PRINC**

### **6.3.3 Reference country or area (common concept with BOP DSD)**

### **6.3.4 Counterpart area (common concept with BOP DSD)**

### **6.3.5. Reference sector (common concept with BOP DSD)**

### **6.3.6 Level of counterpart**

- **Definition:** Identifies the level of FDI relationship
- **Concept mnemonic/Identifier:** LEVEL\_COUNTERPART
- **Name of the code list:** Level of counterpart code list - CL\_LEV\_COUNTERPART
- **Maintenance agency:** OECD
- **Format:** Fixed length – A3

**See Annex 2: FDI DSD v. 1.7, sheet 6 CL\_LEV\_COUNTERPART**

### **6.3.7 Flows and stocks indicator (common concept with BOP DSD)**

### **6.3.8 Accounting entries (common concept with BOP DSD)**

This concept identifies recording concepts for the accounts. In terms of the asset/liability principle, the accounting entries for FDI financial flows and positions are ‘Assets’ and ‘Liabilities’ while the accounting entries for FDI income flows are “credits” and “debits”. The reporting on net FDI concepts according to the directional principle will use as accounting entries: “net FDI inward” for transactions and positions in the compiling economy from abroad (liabilities minus assets); “net FDI outward” for transactions and positions in investments abroad (assets minus liabilities); “net income on inward FDI” for net income payable abroad (debits minus credits); and “net income on outward FDI” for net income receivable from abroad (credits minus debits). The “balance” shows the total net FDI income of the reporting economy (net income on outward FDI minus net income on inward FDI).

### **6.3.9 International accounts item (common concept with BOP DSD)**

This concept follows the sequence of the balance of payments to maintain the links for FDI statistics and BOP primary income on direct investment and the financial accounts functional category direct investment. When reporting time series on FDI income flows, the respondent will select either one of the income items included in the list of possible FDI income components. Each selection will correspond to a different series (e.g. total income, dividends, reinvested earnings, interest). The “financial account” is provided as a headline in the international accounts item (code “FA”). Items falling under the “Financial account” are included in another dimension of the DSD (Functional Category).

### **6.3.10 Functional category (common concept with BOP DSD)**

### **6.3.11 Instrument and assets classification (common concept with BOP DSD)**

### **6.3.12 Type of entity**

This concept identifies structural and locational characteristics of the statistical unit which belong to a multinational group of enterprises as defined by the Framework of Direct Investment Relationship (FDIR). Statistical units may be of different types such as Special Purpose Entities (SPE), operating units, headquarters and external financing units.

- **Definition:** Breakdown by type of enterprise
- **Concept mnemonic/Identifier:** TYPE\_ENTITY
- **Name of the code list:** Type of entity code list - CL\_TYPE\_ENTITY

- **Maintenance agency:** OECD
- **Format:** Fixed length –A3

**See Annex 2: FDI DSD v. 1.7, sheet 12 CL\_TYPE\_ENTITY**

### **6.3.13 Unit of measure (common concept with BOP DSD)**

#### **6.3.14 FDI relationship**

This concept identifies whether the framework used for reporting FDI statistics is based on the influence relationship (>10%) or control relationship (>50%). When time series refer to FDI transactions or positions between fellow enterprises, the “*FDI relationship*” dimension for these time series should be coded as "I" (influence relationship). There is no influence relationship between the fellow enterprises themselves but the reason why such transactions are included under FDI statistics is the existence of an influence relationship from their parent.

- **Definition:** Breakdown by FDI relationship
- **Concept mnemonic/Identifier:** FDI\_RELATIONSHIP
- **Name of the code list:** FDI relationship code list - CL\_FDI\_RELATION
- **Maintenance agency:** OECD
- **Format:** Fixed length – A1

**See Annex 2: FDI DSD v. 1.7, sheet 14 CL\_FDI\_RELATION**

### **6.3.15 Valuation (common concept with BOP DSD)**

#### **6.3.16 Statistical unit**

- **Definition:** Aggregation level for reporting data
- **Concept mnemonic/Identifier:** STAT\_UNIT
- **Name of the code list:** Statistical unit code list - CL\_STAT\_UNIT
- **Maintenance agency:** OECD
- **Format:** Variable length – AN..2

**See Annex 2: FDI DSD v. 1.7, sheet 16 CL\_STAT\_UNIT**

#### **6.3.17 Industrial activity**

- **Definition:** Industrial activity according to NACE Rev.2/ISIC 4
- **Concept mnemonic/Identifier:** ACTIVITY
- **Name of the code list:** Industrial activity code list – CL\_ACTIVITY
- **Maintenance agency:** Eurostat
- **Format:** Variable length – AN..9

**See Annex 2: FDI DSD v. 1.7, sheet 17 CL\_ACTIVITY**

#### **6.3.18 Activity allocation**

- **Definition:** Identifies reference entity to classify economic activity
- **Concept mnemonic/Identifier:** ACTIVITY\_ALLOC
- **Name of the code list:** Statistical unit code list - CL\_ACTIVITY\_ALLOC
- **Maintenance agency:** OECD
- **Format:** Variable length – AN..2

**See Annex 2: FDI DSD v. 1.7, sheet 3 CL\_ACTIVITY\_ALLOC**

## **6.4. FDI DSD attributes (all attributes are common with BOP DSD)**

## **APPENDIX 1: INTEGRITY RULES FOR DATA TRANSMISSION**

Integrity rules for dimensions not listed below are included in the attached questionnaires, as well as in the annexes to this edition of BoP Vademeum.

Member States are also requested to ensure:

- **Time consistency between monthly, quarterly and annual data.** The monthly BOP is the initial assessment of the BOP figures. Therefore, full consistency between monthly and quarterly data is not required, as while quarterly data are requested on a full accruals basis, best estimates (e.g. partly on a cash basis) are accepted for the monthly BOP. However, Member States are encouraged to ensure, to the possible extent, consistency between monthly and quarterly figures. The revision policy, specified on page 11 should ensure consistency between quarterly and monthly figures. Similarly, when annual data are published, quarterly data should be accordingly adjusted.
- Consistency between BOP and IIP. On **voluntary basis** Member States are encouraged to ensure consistency between BOP and IIP data.

Stocks at the end of period ‘T’ (“LE”) should be equal to the sum of the value of stocks at the end of period ‘T-1’ (equal to the value at the beginning of period ‘T’ – “LS”), value of transactions during period ‘T’ (“T”) and value of changes in positions other than transactions (“K”). Changes in positions other than transactions consist of revaluations due to exchange rate changes (“K7A”), revaluations due to other price changes (“K7B”) and other changes in the volume of assets/liabilities (“KA”) – integrity rule to follow is:

$$LE[T] = LE[T-1] + T[T] + K7B[T] + K7A[T] + KA[T].$$

## APPENDIX 4

### Contents of country codes

### Inclusions and exclusions of certain territories in country codes (apply for all data requests)

Code	Country	ISO code	Contents
<b>EUROPE</b>			
DE	Germany	DE	Germany <i>Including</i> Helgoland <i>Excluding</i> Büsingen and Büttenhardter Höfe (customs free zones belonging to the customs territory of Switzerland)
DK	Denmark	DK	Denmark <i>Excluding</i> Faroe Islands (FO) and Greenland (GL)
ES	Spain	ES	Spain <i>Including</i> Balearic Islands, Ceuta and Melilla and Canary Islands <i>Excluding</i> Andorra (AD)
FI	Finland	FI	Finland
		AX	<i>Including</i> Åland Islands (AX)
FR	France	FR	France
		FX	France, metropolitan
		MC	Principality of Monaco
		<i>Including</i> Overseas Departments:	
		GF	French Guyana
		MQ	Martinique
		GP	Guadeloupe (Grande Terre, BasseTerre, Marie Galante, Les Saintes, Iles de la Petite Terre and Désirade)
		RE	Réunion
		YT	Mayotte
		<i>Including</i> Territorial collectivities:	
		BL	Saint Barthélémy
		MF	Saint Martin
		PM	Saint Pierre et Miquelon
		<i>Excluding</i> Overseas Territories (French Polynesia (PF), New Caledonia and dependencies (NC), Wallis and Futuna Islands (WF), French Southern and Antarctic Lands (TF))	
IT	Italy	IT	<i>Excluding</i> San Marino (SM) and the Holy See (VA)
NL	Netherlands	NL	Netherlands <i>Excluding</i> Aruba (AW), Bonaire, Sint Eustatius and Saba (BQ), Curaçao (CW) and Sint Maarten (SX)
NO	Norway	NO	Norway <i>Including</i> Svalbard and Jan Mayen (SJ)
PT	Portugal	PT	Portugal <i>Including</i> Açores and Madeira <i>Excluding</i> Macau (MO)
GB	United Kingdom	GB	United Kingdom of Great Britain and Northern Ireland <i>Excluding</i> Channel Islands - Guernsey (GG), Jersey (JE); Gibraltar (GI), the Isle of Man (IM), Anguilla (AI), Bermuda (BM), Montserrat (MS), the British Virgin Islands (VG), the Turks and Caicos Islands (TC), the Cayman Islands (KY), Falkland Islands (FK), British Indian Ocean Territory (IO), St Helena, Ascension and Tristan da Cunha (SH), Pitcairn (PN) and South Georgia and the South Sandwich Islands (GS)

AFRICA			
MA	<b>Morocco</b>	MA	Morocco <i>Including</i> Occidental Sahara (EH)
AO	<b>Angola</b>	AO	Angola <i>Including</i> Cabinda
IO	<b>British Indian Ocean</b>	IO	British Indian Ocean Territory <i>Including</i> Chagos Archipelago
KM	<b>Comoros</b>	KM	Comoros <i>Including</i> Anjouan, Grande Comore, Mohéli
MU	<b>Mauritius</b>	MU	Mauritius <i>Including</i> Rodrigues Island, Agalega Islands and Cargados Carajos Shoals (St Brandon Islands)

## APPENDIX 12

# Examples of SDMX-ML and SDMX-EDI (Gesmes/TS) messages

### Overview

The transmission format for BPM6 based data should be SDMX-ML 2.0, SDMX-ML 2.1 or SDMX-EDI (Gesmes/TS). This chapter provides an example of a data message written in the three upper standards.

### 12.1 BOP BPM6 SDMX-ML 2.0 Compact message example

```

## 12.4 FDI data message

The FDI data message complies with the general schema that is described in the previous parts of this document. The main differences are as follows:

- Maintenance agency is OECD
- Dataset identifier is BPM6\_FDI\_A
- Series key is composed of 18 dimensions
