Public finance

Public sector

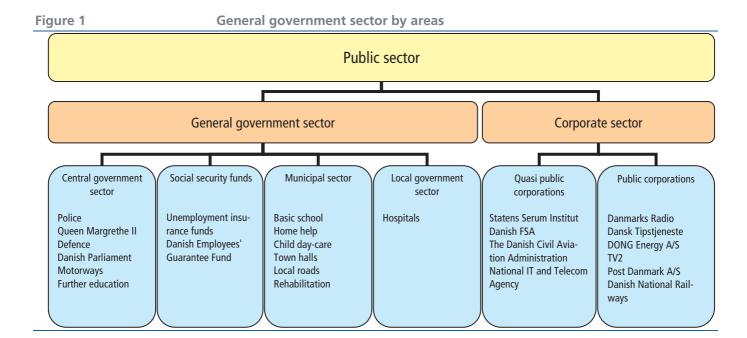

Composition of the public sector

The public sector comprises the general government sector and public enterprises and quasi public corporations (corporate sector).

The general government sector produces non-market services that are primarily funded through taxes. These services are wholly or partially available to private households and enterprises (e.g. day-care institutions, education and hospitals).

The corporate sector is composed of institutions that are run commercially. The difference between public enterprises and quasi public corporations is that they are part of the public system of accounting whose accounts are integrated into state or regional accounts (e.g. municipal utility enterprises), while public corporations are organised as a company or similar according to civil law and are owned or controlled by public authorities (e.g. DONG Energy A/S and the Danish National Railways). This implies that the quasi corporations are 100 per cent controlled by the general government sector, while the public enterprises are controlled to a lesser extent.

In the following, a number of designations are used in describing the public area. It will be explicitly stated if the description also comprises the public corporate sector. Otherwise, figures only relate to the general government sector.

Statistical Yearbook 2011

The structural reform of Danish municipalities 2007

The structural reform of Danish municipalities came into force on 1 January 2007 and gave rise to major changes in the public sector. The reform consists of three main elements: A new municipal map of Denmark, a new distribution of tasks and a reform of financing and monetary equalization.

The changes in the municipal structure implied that the number of municipalities was reduced from 271 to 98. In addition to this, the counties were abolished and 5 regions were established.

There was at the same time a change in the distribution of tasks between the central government, region and local government. For example, the responsibility of most tasks related to nature and the environment was transferred from the counties to the municipalities, while the general government sector became responsible for, among other tasks, further education, which was transferred from the counties.

Similarly, the redistribution of tasks among the sectors has resulted in an adjustment of the municipal system of monetary equalization reflecting the distribution of the new tasks. Hospitals are to be co-funded by the municipalities.

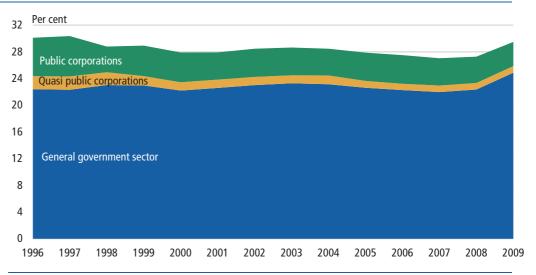

Developments in the public sector

The size of the public sector has remained constant since 1995

Since 1995, compared with the total Danish economy, the size of the public sector has remained constant between 27 and 30 per cent of gross domestic product at factor cost, GDP.

Figure 2 GDP at factor cost for the public sector as a percentage of GDP at total factor cost for the total Danish economy

Compensation of employees in the public sector accounts for about 1/3 of total wages and salaries paid to employees in the Danish economy, while investments have ranged around 13-18 per cent of total investments in the Danish economy during recent years. 90 per cent of expenditure on wages and salaries in the public

sector can be ascribed to institutions under the general government sector, while investments are more evenly distributed between market units and the general government sector.

In recent years a number of privatisations within the public corporate sector have been implemented. This has reduced the size of the public sector.

TDC A/S is an example of a company that has shifted status from public corporation to private enterprise, and consequently the company is no longer part of the public sector.

One fifth of the public sector's GDP were created by private corporations

16 per cent of the public sector's GDP at factor costs were created by public corporations in 2009, but only 9 per cent of total wage and salary costs were paid by the public corporations. At the same time, the public corporations account for 36 per cent of total gross capital formation of the public sector.

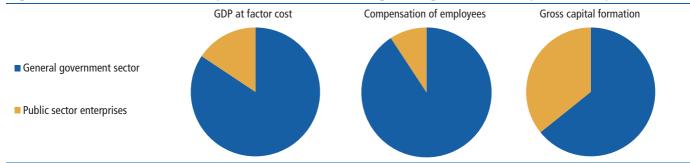

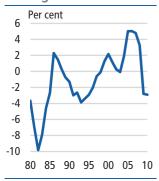

Figure 4
Public sector surplus
(net lending) as a percentage of GDP

■ www.statbank.dk/nat01 and off3

Deficit on public finances in 2010

2010 showed a deficit on public finances. Between 1999 and 2008, there has been a surplus on public finances, except for a small deficit in 2003.

The years between 1975 and 1998 were primarily influenced by a deficit on public finances, except for the period between 1986 and 1987 which saw a short period of economic recovery.

Changes in the economic business cycle have a significant influence on public finances. Periods of economic recovery reduce the costs of unemployment benefits and simultaneously increase revenue from taxes and duties. The opposite applies in periods of recession.

Fall in net debt of the public sector between 1999 and 2008

A surplus or a deficit on public finances impacts the public debt. The size of net debt is significant to the future economic development by having an impact on the fiscal-policy scope in the future. The municipal and regional sectors are not entitled to incur any debt by themselves. Consequently, the large fluctuations in net debt are primarily due to debt incurred by the central government sector.

Since its peak in 1998, public net debt has declined from 35.1 per cent of GDP to a positive net worth of 6.6 per cent of GDP in 2008. In 2010 the net worth was 1.1 pct of GDP.

Increase in public expenditure in 2009

The size of the general government sector is decided politically and depends on economic and social structure conditions. The expansion of, e.g. education, social conditions and hospitals in the 1970s gave rise to a sharp growth of the public sector. Furthermore, women's participation in the labour market resulted in an increasing demand for child care.

The increase in the proportion of current and capital expenditure of GDP peaked in 1994. Between 1994 and 2008, there has been a tendency towards a fall in the proportion of current and capital expenditure of GDP. In 2009 the proportion of current and capital expenditure of GDP increased and now accounts for 58.3 per cent of GDP. The level is nearly unchanged in 2010, where the proportion of current and capital expenditure was 58.0 per cent of GDP.

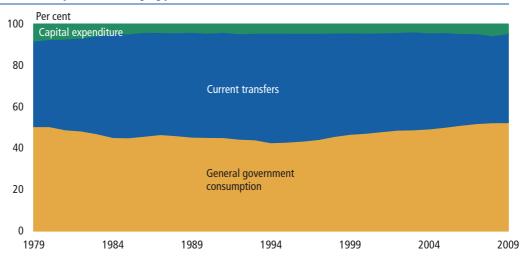

Stagnation in the number employed by the public sector since 1993

The most important factor of production in connection with public production is labour (e.g. teachers, doctors and employees in public administration). About 2/3 of general government consumption comprise wages and salaries. In 1970, the number employed by the general government sector amounted to 21.2 per cent of the total number employed. In 1993, this proportion had increased to about 30.8 per cent, but has since then remained largely constant.

Expenditure by type of transaction

Expenditure by type of transaction shows general government expenditure divided by activities. The distribution of expenditure by type of transaction distinguishes between consumption, current transfers and capital expenditure. Consequently, expenditure by type of transaction shows whether expenditure covers intermediate consumption, reallocation, or capital formation. General government consumption mainly comprises salaries and purchases of goods used in the production of services, which are made available to the public. Current transfers are primarily transfers to households, including pensions and unemployment benefits. Capital expenditure covers, e.g. investments in schools, hospitals, and roads.

Figure 7 Public expenditure by type of transaction

¹ General government current and capital expenditure, including consumption of fixed capital plus sales of goods and services.

www.statbank.dk/off14 and off3

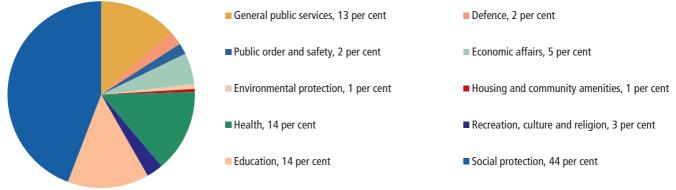

From 1975 until the mid-1990s, public expenditure accounted for a falling share of total public expenditure, while current transfers accounted for an increasing share. From the mid-1990s until 2008, there was a slight increase in the share of public consumption expenditure, while current transfers accounted for a minor fall. The percentage of capital expenditure has fallen until the mid-1980s, but has since then showed a relatively constant share of public expenditure.

Public expenditure by function

The distribution of expenditure by function distinguishes public expenditure by function. Public expenditure by function provides an overview of the mutual size distribution of expenditure among the individual categories, e.g. health, defence, education, etc.

The distribution of expenditure by function has been more or less stable since 1970. However, there has been a slight increase in expenditure on social conditions, which has been compensated for by a reduction in the proportion of expenditure on overall general government services and economic services.

Figure 8 Current and capital expenditure by function. 2010

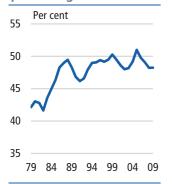

Expenditure on overall public services along with defence, public order and safety, are categories for which expenditure has historically been the basis for the general government sector. Expenditure on general public services amounts to 13 per cent of total public expenditure and comprises general government administration, etc. Defence, public order and safety both respectively accounted for 2.0 per of the resources.

Education, health and social security are functions which are considered core services in a modern welfare state. 72.6 per cent of expenditure in 2010 was spent on these important functions. Expenditure on social security accounts for the largest amount of resources (44.2 per cent). This includes expenditure on, e.g. old-age pension, unemployment benefits, and cash benefits. Expenditure on education and health amounts to 14.1 per cent and 14.3 per cent of total expenditure, respectively. 5.4 per cent of expenditure was spent on economic services, which include especially expenditure on economic, trade, labour market plus transport, communication, and other business services. 0.6 per cent and 2.8 per cent, respectively, are spent on housing and public facilities and on religion, leisure and culture.

Funding general government expenditure

Figure 9 Taxes and duties as a percentage of GDP

www.statbank.dk/nat01 and off12

Taxes as per cent of GDP relatively stable since 1988

General government expenditure is reflected in a similar need for funding where taxes and duties in particular play a decisive role.

In the years from 1975 to 1988, the share of taxes and duties of GDP increased from 38.4 per cent to 49.4 per cent. Since 1988, this proportion has remained almost constant and was 48.2 per cent in 2009.

No changes in the tax structure for 30 years

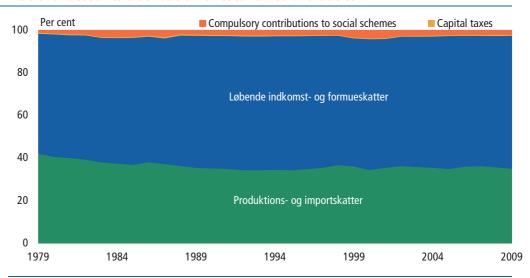

Total taxes can be divided into four main types: Income and property taxes, production and import taxes, capital taxes and compulsory contributions to social security schemes.

Income and property taxes account for the largest share of total taxes. Income and property taxes are taxes on incomes earned by individuals and enterprises (e.g. personal taxes, corporation tax, real interest tax), and taxes linked to the possession of property (e.g. vehicle excise duty).

Production and import taxes are other large items, which primarily comprise VAT and various selective excise duties. Some production and import taxes are used to influence the behaviour of people and companies (e.g. "green" taxes and duties).

The last two items, capital taxes and compulsory contributions to social schemes, are not significant in terms of revenue. The latter is important in other countries where many welfare benefits are funded by compulsory contributions and where social benefits are granted with reference to people's attachment to the labour market.

Figure 10 National accounts distribution of total taxes and duties

Distribution of tasks and burden between the sub-sectors

Division of responsibilities between the sub-sectors

The general government sector can be divided into the following sub-sectors: municipalities, regions, the state and social security funds. In Denmark, there is a high degree of division of responsibilities between the individual sub-sectors. This division of responsibilities can be described by distributing expenditure according to tasks and burden. The distribution of tasks shows expenditure according to the sector that is responsible for such tasks in relation to the public. The sector funding the expenditure is shown by the distribution of burden.

The state covers more of the expenditure than the division of responsibilities dictates. Regions (from 2007), social security funds, and especially municipalities cover less expenditure than is dictated by the division of responsibilities. This is because the state refunds the other sub-sectors for a number of costs, particularly statutory costs in the social area.

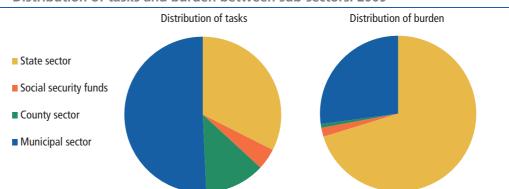

Figure 11 Distribution of tasks and burden between sub-sectors. 2009

6

International comparisons in EU-27 in 2008

On 1 January 2007, the EU was enlarged by two Eastern and Central European Countries: Bulgaria and Romania. EU was founded with European Coal and Steel Community in 1952 by the countries: France, West Germany, Italy, Belgium, Luxembourg and the Netherlands. EU has since then been expanded in 1973, were Denmark joint, 1981, 1986, 1995, 2004 and latest in 2007. The biggest enlargement was in 2004 were EU were expanded with ten Eastern and Central European Countries.

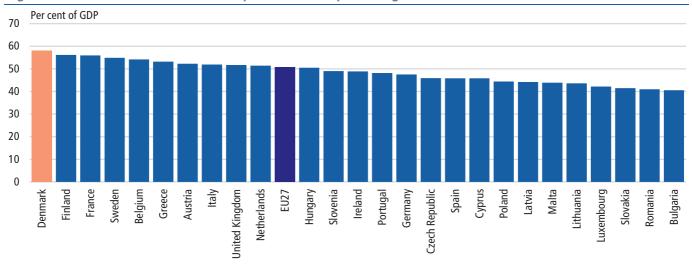

Size of the public sector

There are in the EU great variations in the size of the public sector measured in terms of total public expenditure as a per cent of GDP, from 40.6 per cent (Bulgaria) to 58.2 per cent (Denmark). These variations may reflect either a political choice or the stage of development of the country.

There is a tendency for the size of the public sector to increase concurrently with the development of a country. Consequently, the size of the public sector is greater in industrialized countries, compared to developing countries.

Figure 12

Public expenditure as a percentage of GDP in EU. 2009

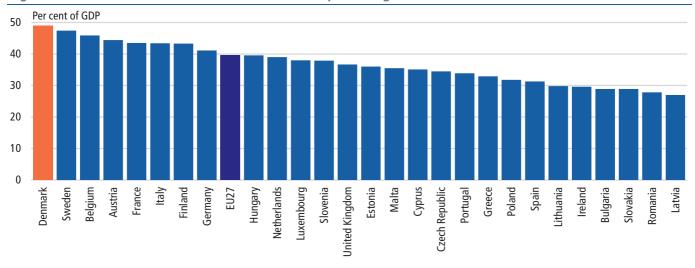

Source: Eurostat, table tex00023

Comparison of taxes

There are in the EU great variations tax burden (taxes and duties as a per cent of GDP), from 27.0 per cent (Latvia) to 49.0 per cent (Denmark). Comparisons between countries should be made with caution, as the tax burden depends, for example, on whether income transfers (old-age pension, etc.) take place as net transfers, gross transfers or allowances. Net transfers are transfers that are tax free for the recipient, while gross transfers are subject to tax. In Denmark, gross transfers are most prevalent, which means that tax revenues are greater.

Figure 13

Taxes and duties as a percentage of GDP. 2009

Public EMU deficits/surpluses and EMU debt in the EU

In the European Economic and Monetary Union (EMU) great importance is attached to sound public finances. The EMU criteria are a guideline for the fiscal-policy situation in the EU and cover the public EMU deficits/surpluses and EMU

debt. The EMU criteria prescribe that the deficit of the EU Member States must not exceed 3 per cent of GDP and EMU debt must not exceed 60 per cent of GDP.

Figure 14

EMU surplus and EMU debt as a percentage of GDP in EU. 2009

Source: Eurostat, table teina200 and tsieb090

The total deficit for EU was 6.8 per cent. In 2009, the public EMU deficit was low in, e.g. Denmark, with 2.7 per cent of GDP and in Sweden with 0.9 per cent of GDP.

There are twenty one countries whose deficit is above the threshold of 3 per cent. Two of these countries are Ireland and Greece with EMU deficit of 14.4 per cent and 15.4 per cent, respectively.

The total EMU debt of EU was 74.0 per cent of GDP in 2009. In other words, the average of EU is above the fixed limit of 60 per cent. The EMU debt of Italy and Greece was high with 116.0 per cent and 126.8 per cent of GDP, respectively, while the EMU debt of Estonia and Luxembourg was low with 7.2 per cent and 14.5 per cent of GDP, respectively. In 2009, Denmark's EMU debt was 41.4 per cent of GDP.
