

## International statistics

### 1. International statistics

#### **The need for comparability**

Growing globalisation has increased the need for statistics regarding each country and therefore also comparisons between these countries. This development requires that definitions/classifications and calculation methods are agreed on; a task which is increasingly becoming a necessary part of the work of international organisations.

#### **Harmonisation**

Direct use of national statistics, i.e. each country's own statistics, for comparison between these countries, is not always possible as calculation methods often vary from country to country. To ensure such comparability, international organisations go to great lengths to harmonise statistical terms (including establishing common nomenclatures) and calculation methods.

Harmonisation can be anything from a set of guidelines (recommendations) to more direct requirements made of the statistical analyses which member countries submit to the relevant organisation.

#### **Organisations which publish statistics**

The most central organisations which publish statistics (which are also included as sources in the section 'International tables' in the Statistical Yearbook) are:

**Eurostat** (Statistical Office of the European Union)

**OECD** (Organisation for Economic Co-operation and Development)

**UN** (United Nations) - *including:*

- **ECE** (Economic Commission for Europe)

- **FAO** (Food and Agriculture Organization of the United Nations)

- **ILO** (International Labour Organisation)

- **IMF** (International Monetary Fund)

- **UNESCO** (United Nations Educational, Scientific and Cultural Organization)

- **WHO** (World Health Organization).

- **World Bank**

International comparable statistics are published as printed statistical publications, as CD-ROMs and in databases, which can be accessed via links from the website of the organisations which publish statistics.

#### **Statistics Denmark's Library and Information**

Statistics Denmark's Library and Information, which is the central reference library for descriptive statistics, houses Denmark's largest collection of international statistics. The collection is constantly expanding and supplemented with the newest material from the organisations which publish statistics. In addition to the large number of printed publications and CD-ROMs, the Library also provides access to a great many international databases as well as the Internet. The Library is open to the public.

Note: Cities with suburbs comprise borough municipalities and surrounding municipalities which are densely populated or that part of surrounding municipalities which adjoin the borough municipality. Cities with a population of more than 300,000 have been included in the table for Europe, however, with regard to Russia, the Ukraine and Belarus, only cities with a population of at least 1 million have been included. Only cities with a population of at least 1 million have been included for the rest of the world. In addition, capital cities have been included and are highlighted by capital letters.

<sup>1</sup> 1995. <sup>2</sup> 1996. <sup>3</sup> Cities with suburbs make up the Greater Copenhagen Region. <sup>4</sup> 2000. <sup>5</sup> 1998. <sup>6</sup> 1997.

<sup>1</sup> The numbers have been converted into standard mortality rates, i.e. frequency of death for a population with a given age distribution. Standard mortality rates are calculated by the WHO based on a European standard population. With regard to Denmark, calculations are based on the age distribution of the Danish population.

<sup>1</sup> The numbers have been converted into standard mortality rates, i.e. frequency of death for a population with a given age distribution. Standard mortality rates are calculated by the WHO based on a European standard population. With regard to Denmark, calculations are based on the age distribution of the Danish population.

New Zealand	1 878	1 750	956	794

Note. Figures for EU countries cover 15-64 year-olds, while the age limit for other countries in the rule is 15+. Furthermore, employment is calculated differently in individual countries, according to whether enterprise surveys are used or official estimates, or interview-based surveys. Most countries (including the EU countries) use harmonized interview-based surveys, however. Therefore as employment is calculated differently in different countries, care should be taken in comparing countries. The different methods of calculation can also mean that the labour force for an individual country can vary from the sum of the countries employed and unemployed persons.

<sup>1</sup> 2000. <sup>2</sup> 1998. <sup>3</sup> Only employed in enterprises with more than 10 employees.
