## Education and culture

## 1. Education

## Pre-school to grade 10

The first stage of the Danish educational system is the basic school, (education at first level). This begins in the optional pre-school year (education preceding the first level) and continues up to and including the optional $10^{\text {th }}$ year in the Folkeskole (municipal primary and lower-secondary school). In 2000, 668,900 pupils attended education at first level and second level, first stage. Of this group, 69,100 began their education at pre-school, while 145,075 attended grades 8 to 10 . Of the latter group, 20,100 students attended continuation school. Due to the changes in the age distribution in the population, the number of pupils attending pre-school has increased by 30 per cent since 1991, whereas the number of students attending grades 8 to 10 (education at second level, first stage) has fallen by 20 per cent during the same period. Figure 1 provides an overview of the structure and admission systems in the Danish educational system, from pre-school through secondary education to higher education.

Figure 1 Number of students in the educational system on 1 October 2000 (International Standard classification of Education)

## Education and culture

General/vocational upper-secondary education is popular - especially among girls
Of all students leaving basic school in 1999-2000, 78 per cent had commenced further education after a period of three months. Almost half the students had elected to attend general upper-secondary education (general programmes of education at second level, second stage), while 28 per cent opted for a vocational education at second level, second stage. The proportion of students who continue their education three months after leaving basic school has not changed significantly during the 1990s. The Gymnasium (upper-secondary school) and higher preparatory examination (general programmes of education at second level, second stage) are more frequently chosen by girls, and vocational education is more frequently chosen by boys immediately after leaving basic school.

$\square$ Not started

## General/vocational upper-secondary education is popular

Education which qualifies students for education at third level is called general upper-secondary education and comprises general upper-secondary education (general programmes of education at second level, second stage), such as "Gymnasium" (upper-secondary school), higher preparatory examination, and adult up-per-secondary level courses as well as general/vocational upper secondary education at the vocational education institutions, such as higher commercial examination and higher technical examination. In 2000, 64,000 students attended general up-per-secondary education, of which 34,300 students attended general/vocational upper-secondary education. The number of students attending general upper-secondary education declined by 14 pct. from 1991-2000, whereas the number of students attending general/vocational upper-secondary education remained at the same level during the period.

Young people take a sabbatical after graduating from the upper-secondary school One out of four ( 26 pct.) students who graduated in 1985-86 continued their education immediately after completing their second-level education. The same applied to one out of five students who graduated in 1999-2000. The proportion of students commencing education immediately after graduation from secondary education was significantly greater amongst graduates from general/vocational upper-secondary education; many of these students opted for vocational education.

## Three out of four resumed their studies 3 years after graduation

Many did not resume their studies until 3-4 years after graduation. 60 pct. of the graduates in 1985-86 resumed their studies 3 years after completing their secondary education, whereas 73 pct. of graduates in 1996-97 resumed their studies 3

## Education and culture

years after completing their education. Graduates from the upper-secondary school mainly chose long-cycle higher education, whereas graduates from the higher preparatory examinatin chose mediu, cycle higher education.

## Vocational education

Vocational education is available at business schools, technical schools as well as agricultural schools, maritime schools, and training programmes for social and health assistants. In 2000, 126,800 students attended vocational education. This number of students has increased by 24 per cent since 1991.

## Morer students attend higher education

At the top of the education system we find higher education; this type of education is theoretical in scope. The prerequisite for admission to higher education will normally be general upper-secondary education. The number of students attending higher education has increased by 34 pct. since 1991 to 192.400 in 2000. Higher education is divided into three levels, based on the duration of studies and their theoretical nature:

Short-cycle higher education (leading to jobs such as construction technician, BA (LSP) (bilingual language secretary), police officer) involves two years of training after having completed upper-secondary education. This type of higher education may involve practical training. In 2000, 23,500 students attended short-cycle higher education.

Medium-cycle higher education involves 2-4 years of mainly theoretical training (examples of medium-cycle higher education include teachers, nurses, and BSc (engineering)). In 2000, 67,100 students attended medium-cycle higher education.

Bachelor and long-cycle higher education requires more than four years of education (examples of long-cycle higher education include solicitors, doctors, and civil engineers). This type of education is mainly theoretical. In 2000, 57,300 students attended long-cycle higher education. In 2000, there were 44,500 students attending bachelor education.

## High frequency of vocational adult education

Outside the main educational system there are a number of courses (of short or long duration) within adult education as well as a few training courses which provide formal qualifications. These courses provide opportunities for those who have left the main educational system. Adult education courses covering almost all the levels within the ordinary educational system are available. In 2001, a total of 1,621,100 course participants took part in adult-education schemes; 76 per cent of these courses were public-sector courses and 24 per cent were private. These statistics concern course participants, which means that individual persons may be included in the statistics more than once during the same year if the person in question attended more than one course. Of the total number of course participants, 74 per cent attended vocational courses - mainly public courses.

## Educational levels within adult education

During the academic year 1999-2000, less than half of the students attending general adult education had completed an education course providing them with pro-

## Education and culture

fessional qualifications. The corresponding figure for vocational schools for adults was approximately 70 per cent during the same period.

10 year after basic school only 50 pct. have professional qualifications
Ten years after leaving basic school in 1989-90, 51 per cent of all individuals had completed training, which provided them with professional qualifications. Of this group, 35 per cent had completed a vocational education course, 15 per cent had completed higher education, and 24 per cent were still studying.

## Smaller "educational remainder"

"The educational remainder" - young people who did not attend any educational institution or had completed an education course providing them with professional qualifications ten years after leaving basic school - accounted for 25 per cent of the year 1989-90. This proportion has fallen by 7 pct. points when compared to the year 1980-81.

## 2. Educational levels and employment

## Increase in the level of education since 1992

In 2001, 60 per cent of the $30-69$ year-olds had completed education providing them with professional qualifications. This proportion represents an 8-percentage point increase from 1992 to 2001. Over the last decade the level of education has increased in many regions of Denmark. The municipalities of Nørager and Jelling accounted for the largest increase of 14 per cent, while the lowest increase was seen in the Greater Copenhagen Area. For example, the level of education only increased by 1 per cent in the municipality of Albertslund. More men than women have completed education courses providing them with professional qualifications. Another characteristic feature is the fact that the younger generation are more highly educated than their parents. "Education courses providing professional qualifications" is defined as vocational or higher education aimed at specific types of jobs.

## High frequency of vocational education

In 2000, the highest level of qualifications amongst the 30 -69-age group was most frequently a vocational education; 38 per cent had completed this type of education. This proportion has gone up by 3 per cent since 1992.

Figure 3
Labour-market status among 30-69 year-olds, by level of education 1 January 2000

## Education and culture

## Low immigrant attendance

However, the educational patterns of young immigrants were different from those of the population as a whole. Fewer immigrants attend an upper-secondary examination, higher preparatory examination, or higher commercial examination and higher technical examination., while more attended basic school. These differences were, however, less significant when compared to 1995 levels; this has implied that more immigrants attend an upper-secondary examination, higher preparatory examination, higher preparatory examination and vocational education.

There is a majority of immigrants from less developed countries attending basic school, upper-secondary education and vocational education, while there is a majority of immigrants from more developed countries attending higher education. This difference is partly due to the fact that the proportion of immigrants includes foreign nationals living in Denmark, while they attend a course.

## Sharp divisions in educational patterns, especially among men and among women with vocational education

Sharp distinctions were observed in the educational patterns for men and women with regard to both educational levels and fields. More men than women had completed vocational education or long-cycle higher education in 2001, whereas more women than men had completed short or medium-cycle higher education in the same year. This difference has become less pronounced during the last ten years. Figure 4 shows the sharp divisions between the choices made by men and women as regards field of vocational education in 1991 and 2001. Six subject fields out of ten were dominated by men in 2000: manufacture of basic metal and fabr. metal products (e.g. smiths), construction (e.g. house painters), agriculture, printing and publishing (graphic technicians), transport (e.g. shipping assistants), and food, beverages, and tobacco (e.g. chefs)

Figure $4 \quad$ 30-69 year-old men and women with vocational education as the highest education completed, by field

## Short and medium-cycle higher education

With respect to short and medium-cycle higher education, five out of ten fields were dominated by men: Social studies (e.g. academy economists and Bachelor of Arts (Business economics), technical studies (e.g. building technicians and engineers),

## Education and culture

agriculture, transport (e.g. home-trade masters and captains) and public security (e.g. police officers).

## Long-cycle higher education is more mixed

As far as long-cycle higher education is concerned, five out of ten disciplines were dominated by men, whereas the rest were mixed. These were pedagogy, the humanities (e.g. MAs in Danish language), music (academic opera training), the food sector (MSc in dairy science), and medical studies (e.g. doctors).

30-69 year-old men and women with long-cycle higher education, by field

Women increase their foothold within certain fields
Even though the educational system continued to be highly divided in terms of gender in 2001, some progress has been made during the period from 1991 to 2001 as regards the education choices made by women and men. The dividing lines remain most rigid for vocational education and training and short and me-dium-cycle vocational higher education, where the proportion of women has only gone up by 2 per cent. The greatest degree of relaxation of the gender barriers was evident within long-cycle higher education, where the proportion of women increased by 8 per cent.

## Great regional differences

Great regional differences were evident with regard to educational patterns within the Danish population in 2001. The proportion of individuals who have completed education courses providing them with professional qualifications varied within each county. There was, however, a trend for the highest proportion completing education courses providing them with professional qualifications to be found around the large cities, with correspondingly lower proportions being evident in the provinces. The highest proportion of individuals who have completed education courses providing them with professional qualifications was in Værløse Municipality ( 78 per cent), while the lowest figure was in Thyborøn-Harboøre ( 45 per cent). Large differences existed within each county.

Figure 6 shows the regional differences in the proportion of the population who have completed an education course which provides professional qualifications in 1991 and 2001.

Education and culture

3. Education in an international perspective

In all the OECD countries, an average of 36 per cent of the 25-64 age group have only completed basic schooling. At 20 per cent, Denmark was among those with the lowest proportion. Lower percentages were found in e.g. the USA, the Czech Republic, Germany, United Kingdom, and Norway. In Denmark, a total of 27 per cent of this group had completed higher education, thus placing Denmark above the OECD average. Denmark was bettered by countries such as Canada, the USA, Sweden and Norway. Figure 3 shows Danish educational levels in comparison with a number of selected OECD countries.

Figure 7
Educational levels in Denmark, compared to selected OECD countries 1999

Children beginning pre-school in Denmark in 1999 will proceed through an average of approximately 17.7 years of education before completing a full-time education course providing them with professional qualifications. Only Finland surpassed Denmark where the average is 18.3 years, while in Sweden, USA and United Kingdom the average was 16.7, 15.3 and 14.7 years of education, respectively. The average for OECD countries was 15.4 years.

## Education and culture

## 4. Culture

## Cultural life is becoming increasingly important

During the period 1988-1997, private consumption of recreational equipment and entertainment has increased from 8.1 per cent of total consumption expenditure to 9.3 per cent. During this period, public expenditure on culture has increased by more than 50 per cent, which brings net public expenditure on all cultural activities to a total of approximately DKK 1,400 per capita per year. Thus, there has been a significant increase to the importance of culture in Danish society.

## Increase in theatre admissions

In 2001, the attendance rate of state-subsidized theatres showed a slight increase, following a fall in attendance of 11 pct. from 1996 to 2000. Plays accounted for 38 pct. of the 2.4 mio. tickets sold, while children's theatres accounted for the secondmost with 22 pct. In terms of attendance, 2001 was a good year for musical comedies and other types of production (revue, cabaret, theatre concert, etc.) at the expense of particularly plays and operas. In 2001, 122 productions were state-subsidised, including subsidies by the Danish Theatre Council, compared to 112 in 2000.

Figure $8 \quad$ Various cultural institutions - activities

## We read fewer books and newspapers

In 2000, there was a slight fall in book lending from public and school libraries, and the falling tendency since 1997 was thus continued. In 2001, there was again a fall in the daily newspaper circulation, corresponding to 11 pct. since 1997.

## More people go to the cinema

In 2001, the number of tickets sold for films screened at Danish cinemas reached 12 mio. or the largest number since 1988 and 11 pct. more tickets compared to 2000. The high number of tickets sold in 2001 was due to the success of Danish films, of which "Italiensk for begyndere", alone sold 650,000 tickets. Five out of the 10 films accounted for one-third of all tickets sold, compared to usually about 20 pct. In 2001, the number of tickets sold for European films and films from other countries was also high, while there was a 12 pct. fall in the number of tickets sold for American films.

## Education and culture

## Fall in admissions to museums

In 2001, admissions rates of museums declined by 4 pct. to 9.6 million. Especially, special-subject history museums saw a fall in admissions, which made up 38 pct. of all admissions in 2001, while there was a small increase in admissions to The National Museum of Denmark. Thus, the total number of admissions in 2001 was almost similar to 1991; the only change is that the number of admissions to the special-subject history museums, comprising, e.g The Old Town and The North Sea Museum, has declined, while the number of admissions to the local history museums, comprising, e.g. H.C. Andersens House and the Museum at Koldinghus, has increased. State-subsidised Museums accounted for over 80 pct. of all admissions. In 2001, the zoological garderns accounted for 2.4 mio. visitors, corresponding to a decline of 5 pct. compared to 2000.

In 2001, Louisiana saw again, despite a fall in admissions, the highest admission rates in Denmark. Compared to 2000, the ranking of the museums with the highest admission rates was the same in 2001, apart from Kronborg Castle and Frederiksborg Museum, which have changed their places

Figure 9
The ten highest admission rates

## Education and culture

## 5. Church

Figure 10

## Membership of the National Church

A total of $4,527,000$ individuals, corresponding to 84.3 per cent of the Danish population, were members of the National Church on 1 January 2002. This proportion has seen a steady decline during the last 17 years, from 91.6 per cent in 1984, and the number of members has fallen by 157,000 individuals during the same period. Amongst Danish citizens, the percentage has been reduced from 92.9 per cent in 1984 to 88.0 per cent in 2000.

## Other religious denominations

The reduction in the proportion of National Church members in the Danish population is partly due to the increase in the number of foreign citizens, of whom only 13.4 per cent are members of the National Church. A large group of these foreign citizens are assumed to be members of a religious community outside of the National Church.

It has not been possible to calculate precisely the increase in the number of members of religious communities outside of the National Church, as reliable information is not available on membership of the Muslim communities. Based on developments in the figures on membership reported by the recognized religious denominations and based on estimates of the number of citizens from countries with a predominantly Moslem population who are currently resident in Denmark, it is likely that there has been a significant increase in the number of members of the recognized religious denominations over the last 15 years.

## Great geographical differences in membership rates

Membership of the National Church is subject to large geographical variations. On 1 January 2002, 67.1 per cent of the population in the Copenhagen municipality were members of the National Church, while the corresponding figure for the population in Jutland was 89.1 per cent. Amongst Danish citizens, the membership rates are 74.4 per cent in the Copenhagen municipality and 91.9 per cent in Jutland. A greater proportion of women ( 85.9 per cent) are members of the National Church than men ( 82.8 per cent). Membership rates increase with age; this trend is mainly caused by a generational effect.

Memberships of the National Church and baptisms in per cent of newly born (1. January)

## Education and culture

## Baptisms

The main source of new memberships of the National Church is baptism of newly born children. The baptism rate, which is calculated as the percentage of all oneyear olds who have been baptised, has fallen from 81.3 per cent in 1984 to 77.2 per cent in 2001 (of children born in 2000); when Danish citizens are considered on their own, the baptism rate has remained almost unaltered from 1984 to 2001 at 84 per cent. The baptism rate for children born in 1999 has fallen to 81.9 per cent.

## Religious ceremonies in the National Church

The National Church performs a series of religious ceremonies in addition to baptisms, including confirmations, marriages, funerals, services and communions. Approximately 80 per cent of the 14-15 year old population is confirmed each year, and 92 per cent of all deaths occasion church funerals. Church marriages account for approximately half of all marriages; this rate has, however, seen a rapid decline in recent years.

Note. The table shows the number of titles registered by the Danish Bibliographic Centre on the basis of the Danish National Bibliography, and because of the time taken to register titles may vary by up to 5 per cent in relation to the number of titles published during the year. Unchanged editions, newspapers, journals, and annual publications, as well as foreign books under commission and publications in microfilm (4 652 titles in 2001) have not been included.
${ }^{1}$ No books are included in statistics for both school text books and children's books. ${ }^{2}$ Not including text books for higher-education establishments, further education, adult education, and self-study.

| Museum Erotica | 107 | 101 |  |  |  |
| Hjerl Hede Open Air Museum | 119 | 101 | a-f. Total number of visitors ${ }^{1}$ | 9926 | 9532 |
| Workers' Museum, Copenhagen | 101 | 93 |  |  |  |

Note. Figures for total visitors only include museums for which number of visitors has been stated for both years. Double museums include both a cultural-historical department and an art department, and it is not possible to divide the figures between the two departments. The table includes museums with at least 30,000 visitors in 2001.
${ }^{1}$ The figures for total number of visitors only include visitors to double museums once.
