General business statistics

1. The Danish business structure

Continued importance of service sector

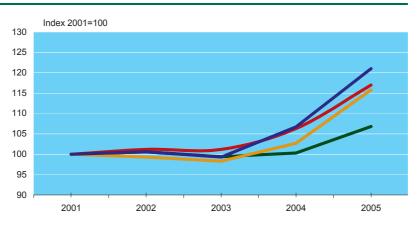

The Danish business structure has experienced enormous changes in recent decades. Denmark has gone from an agricultural and industrial society to a society where services are the dominant activity.

At the turn of the millennium, almost three-fourths of all employed persons were working in the service sector. Services include private services in the form of trade, transport, finance, business services and personal services as well as public services. The growth of the service sector has continued in the new millennium.

The development can be illustrated by a look at the enterprises' turnover figures during the period 2001-2005. The total growth in business turnover is 17 per cent in this period, but there are great differences from one industry to another. Business services have increased by 21 per cent, followed by construction (16 per cent), while the turnover of the manufacturing industry has increased by only 7 per cent.

Figure 1 Total turnover 2001-2005

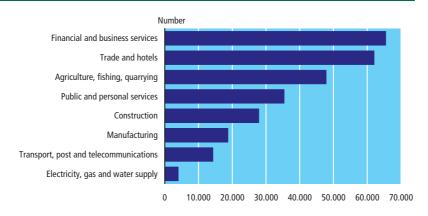

Enterprises and workplaces

Business structures are described by using two business levels: enterprises and workplaces. The enterprise is the superior level, which is legally and financially responsible for the operation of the enterprise. A workplace is an organizationally delimited part of an enterprise at a given address, which produces one – or mainly one – type of goods or services. Thus, workplaces are the sites where the physical production of the goods or services takes place.

Number of enterprises

There are about 275,000 enterprises in Denmark with a real activity. Financial and business services account for most of these enterprises (24 per cent) as well as wholesale and retail trade, hotels, restaurants (23 per cent), while 7 per cent of the enterprises have their main activity in agriculture and fishing. Less than one in ten enterprises has its main activity in manufacturing, and the same is true of construction.

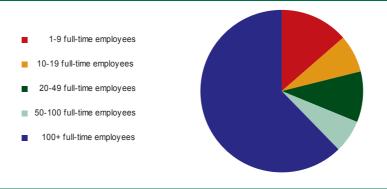

Figure 2 Enterprises by industry 2003

Manufacturing accounts for the largest enterprises

The Danish business structure is characterized by many small enterprises with less than ten full-time employees (91 per cent). Nevertheless, more than 1.3 million full-time employees – or 62 per cent of all full-time employees – work in the largest enterprises with 100 or more full-time employees. The largest concentration is seen in manufacturing, where 63 per cent are employed in the largest enterprises, while this group accounts for only 21 per cent of the full-time employees in construction.

Figure 3 Number of full-time employees by enterprise size 2003

2 General economic statistics Statistical Yearbook 2006

Turnover and exports

Danish enterprises had a total turnover of DKK 2,393 billion in 2003. Of this amount, exported goods and services accounted for DKK 573 billion. The remaining goods and services were sold in Denmark. Enterprises in manufacturing account directly for half of all sales of goods and services abroad. Processed goods from agriculture and fishing account for a considerable part of manufacturing exports. This fact, and the fact that unprocessed goods from these primary sectors are exported through trading enterprises, explains why exports directly from agriculture and fishing are very limited (DKK 808 million). Construction is primarily a domestic sector, where exports account for only about 1 per cent of total turnover.

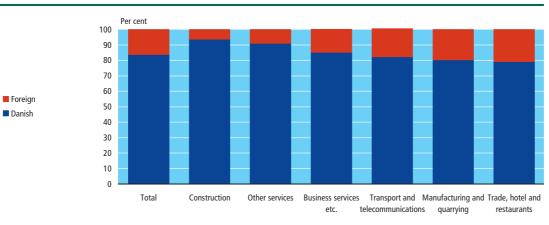

Foreign-owned enterprises in Denmark

Foreign-owned enterprises account for almost 20 per cent of total turnover though they make up only 1 per cent of the total number of enterprises in the private sector in Denmark. These enterprises had a turnover of DKK 465 billion and had 228,000 employees (given as full-time employees) – corresponding to 16 per cent of the wage-earner employment in the private sector.

Foreign-owned enterprises employ a considerable part of those employed in all industries, especially in manufacturing and mining and quarrying as well as wholesale and retail trade, hotels, restaurants (about 20 per cent). In construction, foreign-owned enterprises have the smallest part of those employed (8 per cent).

Figure 4

Employees by foreign and Danish enterprises 2003

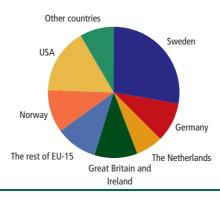

Enterprises owned by foreigners are on average far larger than enterprises owned by Danes. On average, there were 74 employees per enterprise in the foreignowned enterprises in 2003, while there were four employees per enterprise in the Danish-owned enterprises.

Sweden and USA are the two countries with the largest share of total turnover, and enterprises owned by persons from these two countries account for 28 and 16 per cent, respectively, of the total turnover in foreign-owned enterprises in Denmark.

Figure 5

Foreign-owned enterprises by share of total turnover 2003

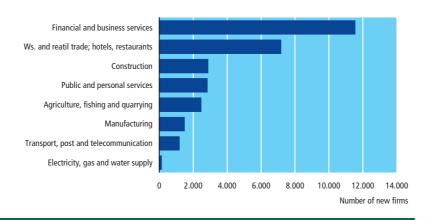

More closed-down than new enterprises

New enterprises are an important factor in a dynamic business structure since they create economic growth by offering new jobs and renewing production processes and product innovation. In 2003, there were a little more than 29,700 new enterprises. Of these, almost 40 per cent were in financial and business services, while less than 10 per cent of the new enterprises were in manufacturing. In the beginning of the millennium, the Danish business sector was characterized by more closed-down enterprises than new ones. Only financial and business services saw a positive net growth in all the years 2001 to 2003, i.e. more new enterprises than closed-down ones.

Of the almost 30,000 new enterprises in 2001, 59 per cent had survived until 2003. The largest share of surviving enterprises is found in construction, where 68 per cent of the enterprises survived the first two years in business. The lowest share of surviving enterprises (45 per cent) is found among the new enterprises in agriculture and fishing.

Figure 6

New enterprises by industry 2003

4 General economic statistics

Statistical Yearbook 2006

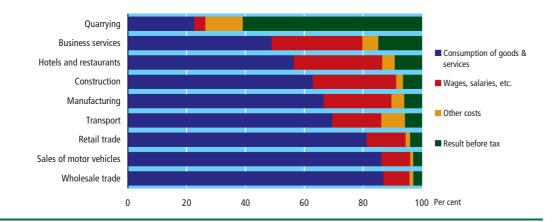

2. Value added

Low value added creation in distrubitive trades

It is important that enterprises have a high value added in order to maintain a welfare society. Enterprises' value added, i.e. current revenue, total, less consumption of goods and services, is spent on wages and new investments, among other things. In 2003, Danish enterprises had an average value added percentage of 28 relative to current revenue, total. Hotels and restaurants (44 per cent) and business services (51 per cent) had a high ranking, while wholesale and retail trade was below average (13 and 19 per cent, respectively).

Figure 7

Enterprise results. Selected industries 2003

The low percentage profit in trade is due to the fact that enterprises in these industries resell products without changing them. Consequently, the work performed per krone earned is considerably less in trading enterprises than in enterprises in other industries, and profits are lower relative to turnover. This is reflected in the accounts so that the consumption of goods and services account for a very large part of the turnover in trading, while the other service industries as well as mining and quarrying have a relatively low consumption of goods and services. On the other hand, wages account for a large part of the costs in the service sector as well as in manufacturing and in construction.

3. Workplaces

Most workplaces are small

Denmark has a little more than 280,000 permanent workplaces. Almost half of the workplaces are situated in Jutland, while about one-third of them are found in the metropolitan area. Approximately 3 million jobs are being performed at these workplaces. On average, there are about 10 jobs per workplace, but the size of the workplaces varies much. By far most of the workplaces are small. Almost two-thirds of the workplaces have less than 5 jobs, and only about 9,000 workplaces in Denmark have 50 or more jobs. The large workplaces are concentrated around the major cities. About 15 per cent of the workplaces with 100 or more jobs are situated in the Municipality of Copenhagen.

Figure 8

Workplaces by industry and size 2004

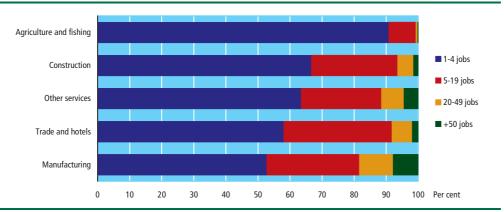

Figure 9 Number of jobs by sector 2004

Especially in agriculture and fishing, workplaces are very small since more than 90 per cent of the workplaces in these industries have fewer than 5 jobs. Most workplaces comprise only one job, and the person working at such workplaces is usually the owner himself. The largest workplaces are found in manufacturing and in services. As regards services, large workplaces are particularly common in public service activities.

One-third of all jobs are public sector jobs

A little more than one-third of all jobs in Denmark are found in the public sector, which comprises general government as well as publicly owned companies. General government accounts for 31 per cent of all jobs, whereas publicly owned companies account for 3 per cent of all jobs. The private sector is almost twice the size as almost two-thirds of all jobs are in private enterprises.

Social institutions account for a little more than one-third of all jobs in the public sector. Almost 25 per cent of the jobs are found in the educational sector, while a little more than 10 per cent of the jobs are found in public administration.

6 General economic statistics Statistical Yearbook 2006

4. Research and development (R&D) and innovation

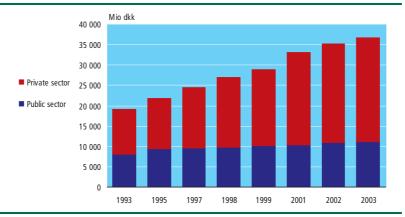

Research and development as well as innovation activities are important factors for the development of productivity and, consequently, for economic growth in society. The creation of new knowledge and its subsequent use in the enterprises are important factors for the dynamics and innovation of the business sector by way of introducing new products and production processes.

Increasing private sector share of R&D

R&D activities take place both in the private and the public sector. Total Danish R&D expenditure in the public and private sector has almost doubled in the period 1993-2003 and amounted to DKK 36.0 billion in 2003. The private sector's share of total R&D expenditure has been increasing since the 1990s and amounted to more than two-thirds of total R&D expenditure in 2003.

Figure 10

R&D expenditure of the public and private sector 1993-2003

Source: Danish Centre for Studies in Research and Research Policy.

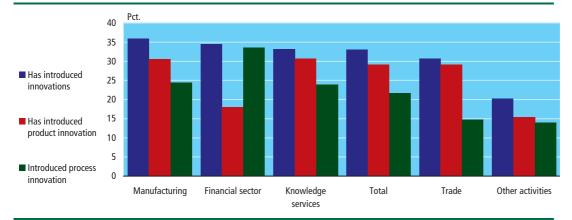

Manufacturing and businesses in knowledge services account for the highest R&D investments

R&D expenditure is particularly high in manufacturing, and total expenditure on own R&D activities reached DKK 15.7 billion in 2003. This amount corresponds to 63 per cent of the private sector's expenditure on R&D. Enterprises in knowledge services, which include, for example, ICT service activities, research and development and consulting engineers accounted for R&D expenditure amounting to DKK 6.6 billion, which corresponds to more than one-fourth (26.4 per cent) of R&D expenditure in the private sector in 2003.

Figure 11

8

Percentage of innovative enterprises 2000-2002 by selected industries

Source: Danish Centre for Studies in Research and Research Policy

One-third of all enterprises are innovative

By far the majority of Danish enterprises do not carry out research and development activities. Rather, they try to increase their competitiveness by introducing new products and production processes, i.e. innovation. One-third of all Danish enterprises have introduced innovations during the period 2000-2002. Innovative enterprises are found primarily in manufacturing, finance and business services as well as trade. In all industries, a larger part of the enterprises have introduced new products relative to new working processes. Total innovation expenditure amounted to DKK 43.2 billion in 2002.
